■ Stocked standard.

JS532

High performance – Universal – Ball nose – 2 Flutes – Weldon

- Tolerances:
- DMM=h5
- DC=e8
- RE= ±0,01 mm
- Regrind possible if DC is ≥Ø6

STEEL AND CAST IRON

Seco offers a complete range of high performance solid carbide square shoulder end mills, ballnose cutters and finish end mills for high productivity in steel and cast iron.

- JHP993, JHP951 and JH142 for chamfer or radius type.
- JHB970, JH112, JH150, JH160 for ball-nose type.

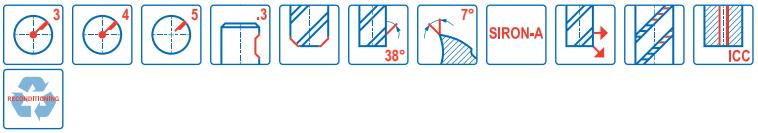
■ Stocked standard.



JHP993

High performance – Steel – Square – 3-5 Flutes – Weldon – Chamfer

- Tolerances:
- DMM=h5
- DC=-0,02/-0,1 mm
- CHW= ±0,05 mm
- Regrind possible if DC is ≥Ø6

STAINLESS AND S-MATERIALS

Seco offers a complete range of high performance solid carbide square shoulder end mills, ballnose cutters and finish end mills for high productivity in stainless steel and ISO S-materials.

- JS754, JS755, JS720, JHP751, JHP760, JHP770, JHP780, JHP794, JCG790, JH770, JH740, JH710, JH790, JH730, JHP994, SHF712, SME714, SME716 and JCO710 for chamfer or radius type.
- JS730, JH780, JHB720, JH721, JH722, SMB713, SMB714 and SMB716 for ball-nose type.
- JH724, JH726, JH734, JH736, JH744, JH746 for barrel type.

NON FERROUS

Seco offers a complete range of high performance solid carbide square shoulder end mills, ballnose cutters and finish end mills for high productivity for non ferrous materials.

- JS412 and JS413 for sharp corner type.
- JS452, JS453, JHP490, JH40, JH421, JM403, JM404, JM406, JH410 and JH440 for radius type.
- JH450, JH460, SMB413, SMB414, SMB416, JM413 and JM416 for ball-nose type.

HARD

Seco offers a complete range of high performance solid carbide square shoulder end mills, ballnose cutters and finish end mills for high productivity for hardened steel.

- JHP170, JHF181, JH120, JH130, JH930, JH142, JME142 and JME144 for radius type.
- JH112, JH150, JH160 and JMB112 for ball-nose type.

PLASTIC AND CFRP

Seco presents a complete solid carbide end mill product range for the machining of glass and carbon fiber reinforced plastics. It consists of diamond-coated and uncoated solid carbide and PCD end mills incorporating different geometries as well as with PCD-brazed cutting edges. This is a product range offering optimized tools for difficult cutting conditions on challenging workpiece materials.

- JC860, JC870, JC871, JC899, JPD890, J93F and J28 for sharp corner type.
- JC845, JC880, JC885 and JC898 for radius type.
- JC875, JC876, JC877 and JPD880 with 45° chamfer type.
- JC850 and JPD850 for ball-nose type.

GRAPHITE

Seco diamond-coated solid carbide end mills are designed specifically for machining graphite. They offer up to 10 times more tool life than milling cutters with conventional coatings. Available in a variety of geometries and an extensive diameter range, these tools feature the best possible substrate to ensure the perfect adhesion of the diamond coating across a range of cutting parameters.

- JD620, JD630, JD640 and JME642 for radius type.
- JD660, SMB614, SMB616 and JMB642 for ball-nose type.

SECO X-HEADS

The new Seco Tools Exchangeable Head range is a comprehensive offering to meet most customer demands. Utilizing our proven solid carbide geometries, we offer various types to machine most materials and complete various machining operations. The connection is a proven exchangeable head design to give high process security and reliability. The shanks offer many types for short reach up to long reach applications. Straight necking and tapered necks to give the best combination of stability depending on the needs for your machining operation.

- XSE550, XSE720, XSE450, XHF580, XHF780 XVE540 and XVE510 for chamfer or radius type.
- XSB540, XSB720 and XVB510 for ball-nose type.
- XSC509, XVC506, XVC509 and XVC512 for conical type.
- XHT740 for barrel type.

XSE550

High performance – Universal – Square – 4 Flutes – Corner radius or chamfer

- Tolerances:
- DC= e7
- RE= ±0,02 mm
- Regrind possible if DC is ≥Ø12 mm

*Max ramping angle
All values are percentages of original (100%) cutting data.

Nomenclature and formulae

RPM

$$n = \frac{v_c \cdot 1000}{\pi \cdot D_c} \quad \text{(rev/min)}$$

Cutting speed

$$v_c = \frac{n \cdot \pi \cdot D_c}{1000} \quad \text{(m/min)}$$

Feed speed

$$v_f = n \cdot z_n \cdot f_z \quad \text{(mm/min)}$$

Feed per revolution

$$f = z_n \cdot f_z \quad \text{(mm/rev)}$$

Metal removal rate

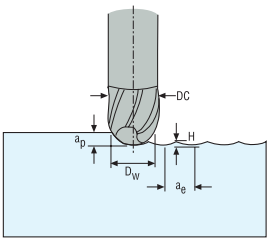
$$Q = \frac{a_e \cdot a_p \cdot v_f}{1000} \quad \text{(cm}^3\text{/min)}$$

Cutting speed and RPM for copying

$$v_c = \frac{n \cdot \pi \cdot D_w}{1000} \quad \text{(m/min)}$$

$$n = \frac{v_c \cdot 1000}{\pi \cdot D_w} \quad \text{(RPM)}$$

$$D_w = 2 \cdot \sqrt{a_p (D_c - a_p)} \quad \text{(mm)}$$



Calculation of a_p vs. overhang length:
If the overhang length (XS) is longer than 4 x DC and Cylindrical shanks are used it is important to adopt another depth of cut (a_p) value than that indicated in the table.
Use the following formula to calculate the new a_p value

$$a_p new = a_p \times (4 \times DC/XS)^2$$

Profile heigth

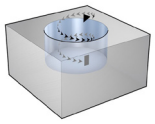
$$H = \frac{D_c}{2} - \frac{\sqrt{D_c^2 - a_e^2}}{2}$$

$$D_w = 2 \cdot \sqrt{a_p (D_c - a_p)} \quad \text{(mm)}$$

Profile heigth H (um)

DC	Pitch a_e (µm)						
	0,06	0,08	0,11	0,15	0,20	0,3	0,45
1	0,90	1,60	3,00	5,70	10,0	23,0	53,0
2	0,45	0,80	1,50	2,80	5,0	11,0	26,0
4	0,23	0,40	0,76	1,40	2,5	5,60	13,0
6	0,15	0,27	0,50	0,94	1,7	3,80	8,40
8	0,11	0,20	0,38	0,70	1,3	2,80	6,30
10	0,09	0,16	0,30	0,56	1,0	2,30	5,10
12	0,08	0,13	0,25	0,47	0,83	1,90	4,20

a_p = Depth of cut mm/axial depth of cut (mm)
a_e = Width of cut mm/radial depth of cut (mm)
DC = Cutter diameter
f = Feed per revolution (mm/rev)
f_z = Feed per tooth (mm/tooth)
z_n = No. of teeth
n = RPM (rev/min)
Q = Material removal rate (cm³/min)
v_c = Cutting speed (m/min)
v_f = Feed speed (mm/min)
D_w = Working diameter



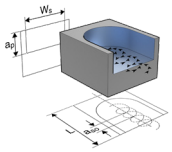
Operation recommendations

Ramping method

The table below shows the feed rate percentage to use at certain ramping angles

Recommended diameter of hole for helical interpolation ramping

Diameter of end mill DC	Diameter of hole
1-2,5	1,4 x DC
3-6	1,3 x DC
8-12	1,2 x DC
16-32	1,15 x DC



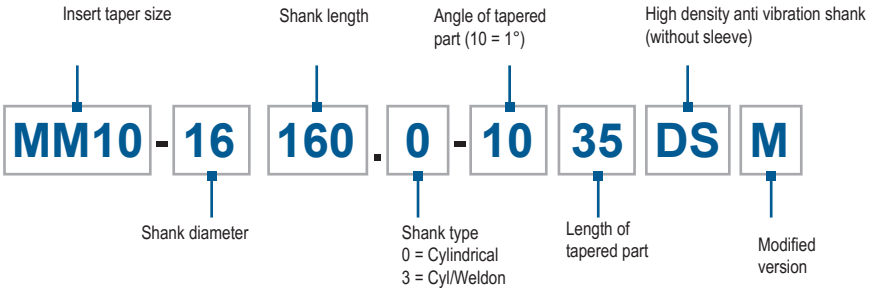
Trochoidal method

The figure below shows a method often called the trochoidal method for milling slots

Recommendation of width of slot

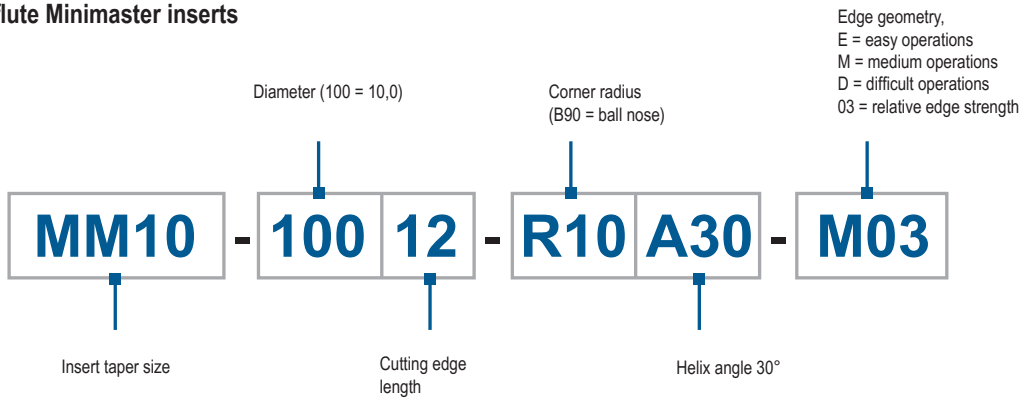
Diameter of end mill DC	Slot width
1-2,5	1,8 x DC
3-6	1,6 x DC
8-12	1,4 x DC
16-32	1,2 x DC

MINIMASTER™



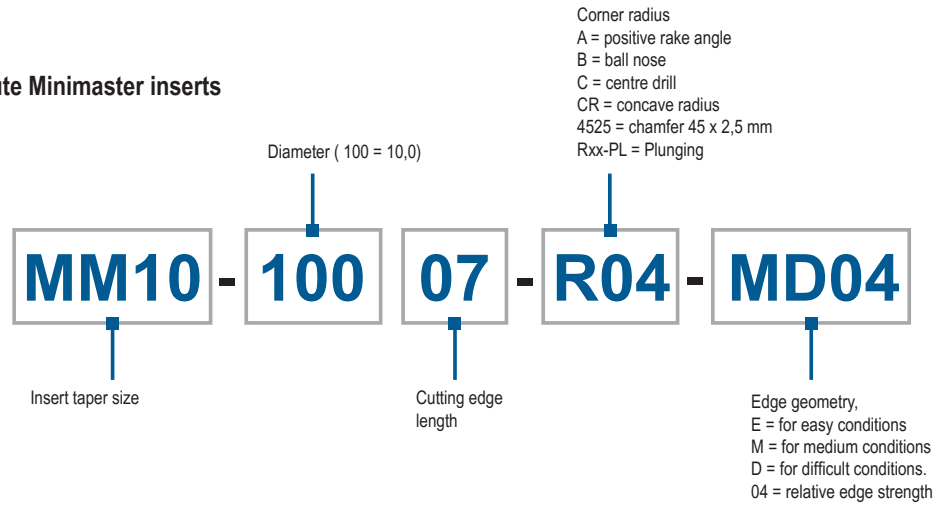
Minimaster™ is a unique, versatile end milling system that can combine different solutions for optimum accessibility and maximum stability and security.

The flexible two-piece design combines shanks and inserts to save time, money and create a versatile tool that enables users to find a solution for almost every application – whether they need to minimize the overhang, attain maximum stability, or more.



- Square Shoulder range: 6-20 mm (.25 - .75 inch)
- Ballnose range: 6-20 mm (.25 - .75 inch)
- Center Drilling/Chamfering range: 6-19,05mm (.25 - .750 inch)
- High Feed range: 8-12 mm (.375 - .625 inch)
- Plunging range: 6-16 mm (.25 - .625 inch)
- Concave Radius range: 12 mm (.472 inch)

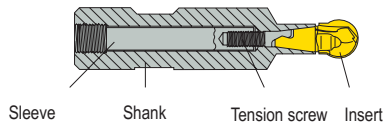
Code keys

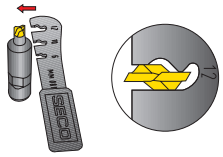


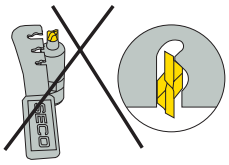
Shanks

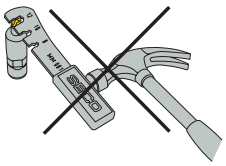
3-flute Minimaster inserts

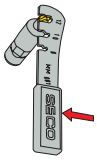
2-flute Minimaster inserts











Note that parts of the code can vary for different types of insert or shanks

Internal through coolant

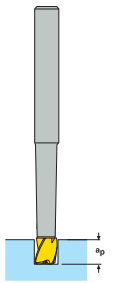
Mounting instructions for 2-flute Minimaster

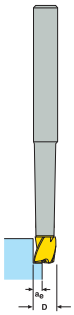
Torque wrench	
	The sleeve must be securely tightened in the shank before the tension screw and insert are fitted. If the wrench cannot be used for changing the insert (If the insert has broken off or jammed in the shank) , the sleeve can be released, which will also release the insert. Use Allen key (turn it anti-clockwise) to back off the sleeve until the insert is free. Re-tighten the sleeve in the shank before fitting the tension screw and the new insert. For 3-flute Minimaster another key (MM0416) must be used (Key grip on hexagonal part of the insert.)
	Make sure that the wrench is used correctly
	If the wrench is used on the wrong side, it will cause damage
	Do not use excessve force
	Normal hand-power is quite sufficient

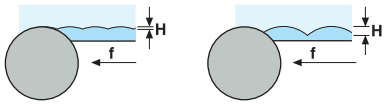
Selection guide

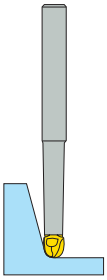
1. Select taper size
The design of the workpiece and the machining operations determines suitable taper size. Select the largest possible taper size for best strength and stability.

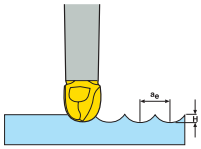
2. Select insert
a. Use the tables beginning on page 676 to classify the workpiece material into a Seco material group.
b. Look up the pages for the selected taper size and choose a suitable insert in the insert selection table.

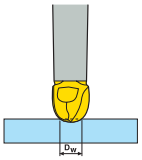






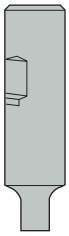


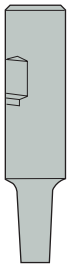


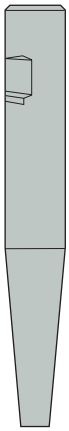


3. Select shank
a. Look up the pages for the selected taper size and choose a suitable shank in the tool data table.
b. Always choose the shortest shank possible to achieve the best possible stability.

4. Select cutting data
a. Cutting speed recommendations are found in the cutting data tables for each selected taper size. Cutting data recommendations are based on stable conditions and might therefore need to be adjusted depending on the stability in the application (tooling, machine & workpiece fixturing). General rule for max ap in slotting is DC*0.3= Max APMXS. (See figure 1)
b. Feed and cutting speed recommendations are found in the cutting data conversion table.
c. Maximum RPM that for safety reasons should never be exceeded, are shown on page N/A.
d. If the cutter is not fully engaged the feed per tooth and the cutting speed should be increased compared to the recommendations for a fully engaged cutter. The reason for that is to keep the average chip thickness and the working temperature in the cutting zone.
e. Divide the radial depth of cut with the cutter diameter to get the actual cutter engagement percentage(a_e/DC%), for ball nose cutters use the effective working diameter D_w instead of DC (See figure 2 & 6)
f. Use the percentage to get a correct feed per tooth and cutting speed recommendation for the actual cutter engagement.







5. General
- When milling in corners and bottoms of cavities the feed rate should be reduced due to the increase of the average chip thickness. Use the feed per tooth recommendations for a fully engaged cutter.
- When steep down copying with an angle bigger than 40° or steep up copying with an angle bigger than 30° in combination with small depths of cut, use the diameter (DC) as working diameter instead of Dw.
- When calculating feed per revolution and feed speed, always use the ZEFP-value. That is the effective number of teeth to use for cutting data calculations. The ZEFP-value can be found in the insert selection table.

Note! There will be a deterioration in the surface finish on the workpiece when the feed rate is increased. (See figure 3 & 5)

Torque wrench and Max RPM information

Torque wrench	
Recommended RPM for all Seco cutters are shown on each catalogue page. Normally there is no need for balancing tools for RPM up to 10 000. However in some cases balancing is necessary, for instance when using heavy tools and tool holders in small machines	
Torque wrench with fixed torque values to ensure the correct tightening force when mounting the Minimaster insert into its holder. Dynamomentic keys are calibrated according to ISO 6789. Code key: MM02-4006 MM02 = 2-flute (MM03 = 3-flute) 40 = Torque value 4 Nm 06 = Insert size	Over 10 000 RPM: We recommend balancing of tool and tool holders at least separately. Over 20 000 RPM: Both tool and tool holders must be balanced at least separately. Over 30 000 RPM: Tool and tool holders must be balanced as a unit. The max RPM in the tables should never be exceeded.)

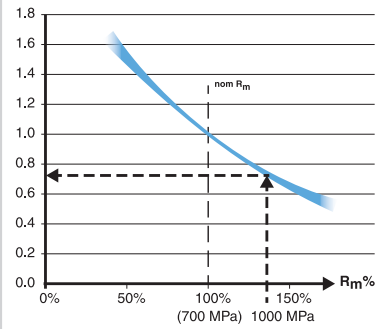
SMG – Introduction

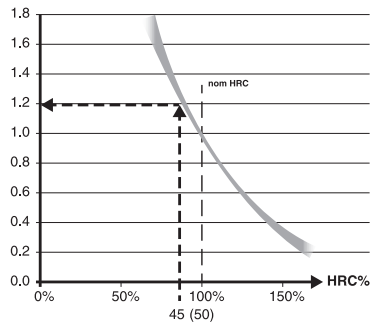
The foundation for SMG is a classification of workpiece materials based on their type rather than their relative machinability and consequently it contains workpiece materials like composites. It is comprehensive enough, but still easy to identify which SMG a particular material belongs.
Each SMG has a specific material standard in a specific condition assigned as reference to allow easy adjustment of cutting data for any actual material compared to any Seco reference material see page(s) 676-679.
As example the reference materials EN C45E for SMG P4 and EN 42 CrMo 4 for both SMG P5 and SMG H5 see further details in the following tables.

SMG	Description	Properties	Reference
P4	Low-alloy general structural steels, 0.25% < C < 0.67%wt Low-alloy Quench & Temper steels	520 < R_m < 1200	C 45E R_m = 660 N/mm^2
P5	Structural steels, 0.25% < C < 0.67%wt Quench & Temper steels	550 < R_m < 1200	42 CrMo 4 R_m = 700 N/mm^2



SMG	Description	Properties	Reference
H5	Quenched & Tempered steels	38 < HRC < 56	42 CrMo 4 50 HRC

Focusing specifically on EN 42 CrMo 4 in annealed condition, the ultimate tensile strength R_m may typically vary between Rm = 630 N/mm^2 and R_m = 780 N/mm^2, which provide a reference level for SMG P5. In Quenched & Tempered condition, the ultimate tensile strength R_m may typically be between R_m = 900 N/mm^2 and R_m = 1100 N/mm^2 thus still belongs to SMG P5. However, if hardened above R_m = 1200 N/mm^2 it instead belongs to SMG H5.



SMG	EN	W.-Nr	AFNOR	BS	UNI	JIS	AISI / ASTM	GOST	Condition	R_{m_nom}	HRC_{nom}
P5	42 CrMo 4	1.1201	42 CD 4	708 M 40	42 CrMo 4	SCM 440 (H)	4142, 4140	38HM	Annealed	700	
	42 CrMo 4	1.1201	42 CD 4	708 M 40	42 CrMo 4	SCM 440 (H)	4142, 4140	38HM	Quenched & Tempered	1000	
H5	42 CrMo 4	1.1201	42 CD 4	708 M 40	42 CrMo 4	SCM 440 (H)	4142, 4140	38HM	Quenched & Tempered		45
	42 CrMo 4	1.1201	42 CD 4	708 M 40	42 CrMo 4	SCM 440 (H)	4142, 4140	38HM	Quenched & Tempered		50

The EN 42CrMo4 quench & tempered steel could be used to illustrate the machinability dependence of materials' condition.
The graphs below indicate how speed recommendations for a nominal material conditions may be adjusted for relative R_m (left diagram valid for ISO-P) and for relative HRC (valid for ISO-H).

Speed recommendation based in material machining properties, steel

Speed recommendation based in material machining properties, hardened steel

To further illustrate how the SMG P5 nominal v_c can be adjusted to a more accurate recommended v_c we need ultimate tensile strength R_m data and in this case we use the EN 42 CrMo 4 quenched & tempered to R_m = 1000 N/mm^2 according to above table (bold blue arrows).
Assume that we find that the SMG P5 nominal v_c = 280 m/min / *918.64 sfm* for a certain product and machining.
Then, actual recommended v_c = 280 m/min x 0,75 = 210 m/min / v_c = *918.64 sfm x 0.75 = 688.98 sfm.*
Consequently in the SMG H5 the nominal v_c can be adjusted using the hardened EN 42 CrMo 4 at HRC 45 (smaller grey arrows).
Assume that the SMG H5 nominal v_c = 50 m/min / *164.04 sfm* for a certain product and machining using a coated cemented carbide tools then, actual recommended v_c = 50 m/min x 1,2 = 60 m/min / v_c = *164.04 sfm x 1.2 = 196.85 sfm.*
For further workpiece material details please see page(s) 680 - 687 and suggested cutting data at applicable pages.
For more convenient cutting data handling we recommend applicable tools in My Pages – on www.secotools.com
These cutting data compensations for steels are fully implemented at www.secotools.com in MyPages (see QR-code in the upper right corner).

Steels, ferritic and martensitic stainless steels

Milling

Seco

At Seco, we make tools, tech, and solutions for the most advanced manufacturing challenges on Earth. From our founding in Fagersta Sweden, to today's global company, our business has always been made to measure, and built on trust.

Combining cutting-edge, precision tools with lasting, personal partnerships, we're a true people company helping our partners discover the future of the manufacturing industry.

We're proud to make for makers, invent for inventors, and partner with pioneers. Driving the future forward with our focus on innovation. In short - if the right tool for the job exists, we'll deliver it. If it doesn't, we'll create it.

We're proud to put sustainability at the heart of everything we do, challenging perceptions of our industry, changing the process of manufacturing, and playing our own small part in shaping a brighter looking future.

Made for Makers

General information milling cutters

Mounting type and insert clamping system 7-8

General information inserts

Code keys, grades, insert geometries 9-15

Iso attribute information

..... 16

Square shoulder and slot milling cutters

Technical information 17-21
Double turbo 22-29
Turbo 30-75
ABEX 76-80
Square T4 81-96
Square 6 97-114

Helical milling cutters

Technical information 115-122
Helical Turbo 123-159
Helical SN8-13 160-172
Helical Square T4 173-184
R215/220.59 Helical 185-191
R215/220.69-15XH Helical 192-195
R235.15 Helical 196-200

Face milling cutters

Technical information 201-209
Double Quattromill 210-238
Double Octomill 239-257
Quattromill 258-281
R220.88 SNMU 282-294
Octomill 295-312
R220.60 313-316
R220.30 317-322
R230.19 323-326

Disc milling cutters

Technical information 335.14 327-335
Exchangeable heads 335.14 336-354
Technical information 355-362
335.15 363-367
335.10 368-379
335.19 380-395
335.18 396-420
335.25 421-442
335.29 443-446
Technical data and spare parts 335.18/335.25 449-453
Cutting data 335.18/335.25/335.29 454-484
335.16 485-493

High feed milling cutters

Technical information 495-503
R217/220.21-SP 504-527
R217/220.21-LP 528-549
R217/220.21-LO 550-557

R217/220.21-218.19 571-588
R220.21-SCET 589-593

Copy milling cutters

Technical information 595-604
R217/220.29 605-656
R217/220.28 657-662
R218.20/R218.19/R218.24 663-712
R217/218.97 VP/XP 713-728

Plunge milling cutters

Technical information 729-733
Square 6 Plunge 734-738
Turbo Plunge 739-755
SCET 756-763

Chamfer milling cutters

Chamfer Turbo 12 764-775
R215/220.49 770-773

Spot facing cutters

R417.19 774-779

Advanced material

PCBN 780-794
Ceramic 795-799
PCD 800-804

Inserts

Milling inserts 805-861

Technical data

Cutting data calculation 862-868
Trouble shooting 869-871
Torque information 872-873

Insert clamping system

Clamping by umbrella screw-S

The inserts are clamped by an inclined screw which holds the insert in position in its seat.

Clamping by wedge -W or -M

The inserts are held in position by a wedge and a screw which clamps the insert onto the seat. (Example shows milling cutter with cassettes).

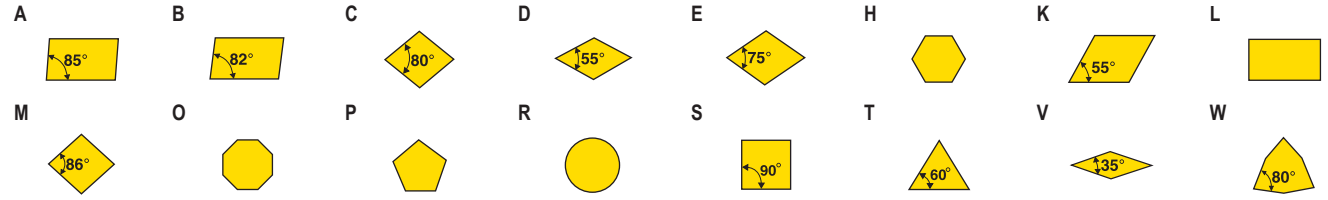
Clamoing by center lock screw -S

The inserts are secured through a centre hole by means of a screw which clamps the insert firmly against the bottom and side of its seat.

Clamping by spring action

The inserts are retained by a clamping/spring action into a fixed insert seat

Square T4



The inserts are secured through a centre hole by means of a screw which clamps the insert firmly against the bottom and side of its seat.

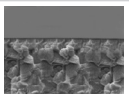
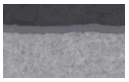
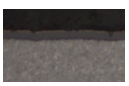
Insert grades







Uncoated Grades

	**H15**	Hard, wear resistant grade for milling in aluminium.
	**H25**	Tough micro-grain carbide grade for milling in superalloys and aluminium.

CVD Coated Grades

	**MP2501**	CVD-coated grade based on Duratomic™ coating, First choice in steel for maximizing manufacturing output under most varying productivity. Alternative choice stainless steel applications under stable condition. Ti(C, N)-Al_2O_3
	**MK1500**	CVD-coated grade based on Duratomic™ coating. Basic grade for milling cast iron and nodular cast iron, with or without coolant. Ti (C, N) – Al_2O_3
	**MP1501**	CVD-coated grade based on Duratomic™ coating. Grade for high performance and productivity in steel material under stable conditions and for milliing hardened steel. Excellent grade for grey and nodular cast iron. Ti (C, N) – Al_2O_3
	**MS2500**	Optimization grade for superalloy materials, also suitable for rough milling in tool steel. Ti (C, N) – Al_2O_3
	**MM4500**	Extremly tough grade for duplex stainless steel. Can also be used for a wide range of materials when cutting conditions are unstable. Ti(C, N)-Al_2O_3
	**MP3501**	CVD-coated grade based on DuratomicTM coating. Basic choice for unstable conditions in steel and cast iron material, alternative choice when machining stainless steels. Ti (C, N) – Al_2O_3

PVD Coated Grades

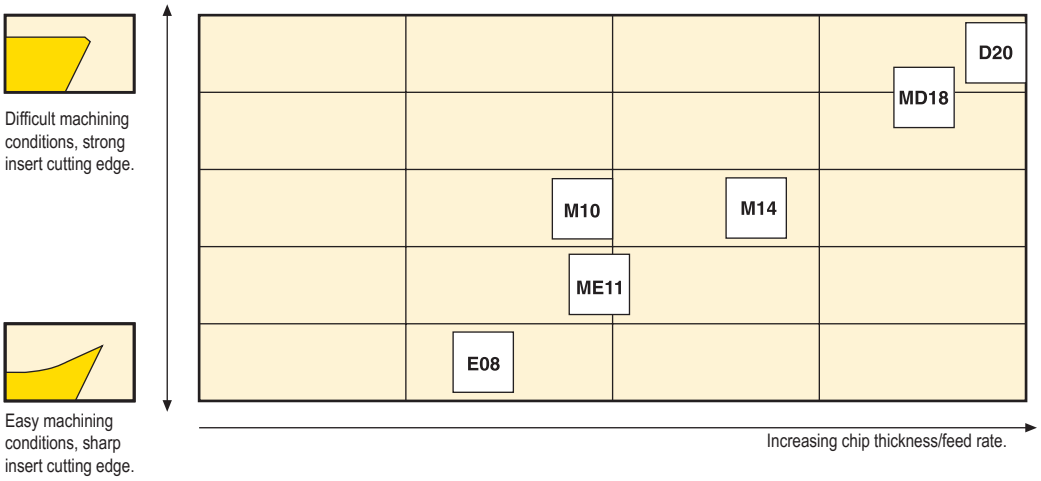
	**F40M**	PVD-coated grade for fine to medium rough milling. First choice for milling with small feeds and/or low cutting speeds. Excellent for milling when there is a risk of vibrations and when coolant is used. Recommended for machining superalloys. (Ti, Al) N – TiN
	**MK2050**	PVD-coated grade for cast iron, Improved edge integrity. First choice in all cast iron materials. Excellent for milling with and without coolant. (Ti,Si)N/(Ti,Al)N
	**MH1000**	Extremely hard grade for milling hard steel but also favourable in finishing operations in cast iron. (Ti;Al)N
	**MS2050**	PVD-coated grade first choice for machining titanium alloys. Can also be used as a complementary grade for milling stainless steels when increased toughness is needed. (Ti;Al) N – NbN
	**MP3000**	Highly wear resistant optimized grade for milling in steel. (Ti;Al)N
	**F15M**	Hard and wear resistant grade for milling in aluminium and non-ferrous alloys. Excellent grade, in combination with protected cutting edges, for high speed machining in hardened steel. (Ti, Al) N – TiN
	**F30M**	Basic grade for Minimaster inserts and thread milling inserts. Also suitable for milling stainless steel, hardened steel and superalloys. (Ti, Al) N – TiN

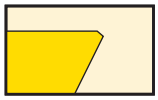
PVD Coated Grades		
	**MP2050**	PVD-coated grade for tough machining conditions and high temperatures in martensitic and austenitic stainless steels, dry and wet machining possible. Alternative in super alloys in unstable conditions. (Ti,Si)N/(Ti,Al)N
	**F32M**	Universal grade for R335.14 replaceable head offering an excellent combination of strength and toughness. The F32M shows an exceptionally broad application range and is applicable in all type of material with this type of tool. (Ti, Al) N – TiN

Insert grades

Cemented carbide is an alloy of tungsten carbide (WC) and cobalt (Co). Cubic carbides like tantalum carbide (TaC), titanium carbide (TiC) and niobium carbide (NbC) can also be added. Tungsten carbide is the main component and gives the hardness. Cobalt is the binder phase and gives the toughness. Cubic carbides are added in order to affect properties like hot hardness, deformation resistance and chemical wear resistance.

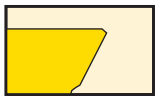
Most modern grades are coated with either CVD (Chemical Vapour Deposition) or PVD (Physical Vapour Deposition) technique.
The coating improves the wear resistance of the grade.
CVD-coated grades are suitable for wear resistance in demanding applications with high feed rates and intermediate to high cutting speed.
PVD-coated grades are recommended for applications with low feed rate where high edge toughness is required. PVD-coated grades are suitable for applications with low to intermediate cutting speed.





HX, H15 and H25 = uncoated
CBN300P = PVD coating
CS100/CS300/CW100 = ceramic

The black oval circle areas in the chart indicate an inserts main ISO application groups.
The white oval circle area in the chart indicate an inserts other complementary ISO application groups.



For TGP45 use ISO application area for MP2501
For CP500 and CP600 use ISO application area respectively for F30M and F40M

x — Fixed pocket (x indicates number of teeth)

x — With cassette (x indicates number of teeth)

Slotting and contouring

Optimized for contouring

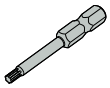
DOUBLE TURBO 16

Using the most positive helix cutting angle geometry on the market today means less power consumption, smoother cutting and longer tool life. Together with the impressive 90-degree angle accuracy and the double-sided inserts, this generates a good surface finish and reduces costs.

- Reduced downtime boosts your material removal rate with a depth of cut capability up to 15 mm (0.59”)
- Cutter range metric, Ø 32-200 mm (Imperial Ø 1.250-5.000 inch)
- Reduced cost because of double-sided inserts with 4 cutting edges
- Insert type ZOMX16

Double Turbo 16 – R217.64-ZO16 – Metric



- For insert selection and cutting data recommendations, see page(s) 28-29
- For complete insert programme, see page(s) 853
- For ISO attribute explanation, see page 16

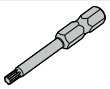
TURBO CUTTERS

The Turbo family takes square shoulder milling to the max. Suitable for most roughing, semi-finishing and finishing operations, these highly versatile cutters offer long tool life and high precision via optimized properties that reduce heat generation and cutting forces.

- Turbo 06 Insert size 06, cutter range metric, Ø 10-40 mm (Imperial Ø 0.375-1.500 inch)
- Turbo 10 Insert size 10, cutter range metric, Ø 16-100mm (Imperial Ø 0.500-3.000 inch)
- Turbo 12 Insert size 12, cutter range metric, Ø 20-250 mm (Imperial Ø 0.750-4.000 inch)
- Turbo 16 Insert size 16, cutter range metric, Ø 25-250 mm (Imperial Ø 1.000-6.000 inch)
- Turbo 18 Insert size 18, cutter range metric, Ø 32-250 mm (Imperial Ø 1.000-6.000 inch)

Turbo 06 – R217.69-06 – Metric



- For insert selection and cutting data recommendations, see page(s) 36-37
- For complete insert programme, see page(s) 843
- For ISO attribute explanation, see page 16

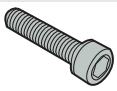
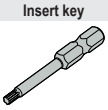
R220.90 ABEX

These multipurpose 90° square-shoulder milling cutters are for heavy roughing applications, delivering large depth-of-cut capability and high feed rates for consistent performance and excellent metal-removal rates.

- Cutter range 63-315 mm (2.5-12 inch)
- Max depth of cut 24 mm (0.94 inch)
- Recommended slotting depth of cut 13 mm (0.51 inch)
- Insert corner radii range 1.6 mm (0.063 inch)

R220.90-26 ABEX – Metric





- For insert selection and cutting data recommendations, see page(s) 79-80
- For complete insert programme, see page(s) 806
- For ISO attribute explanation, see page 16
- KAPRS 90°

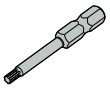
SQUARE T4

Made for roughing and semi-finishing operations, the Square T4 features four cutting edges and an innovative tangential cutter design that increases the surface area of contact between the insert and the cutter body resulting in good surface finish during slotting, contouring and plunging applications.

- Multi-edge inserts optimize cutting stability
- Available in two inserts size, 08 and 12
- Allow for clean 90-degree walls

Square T4 – R217.94-08 – Metric



- For insert selection and cutting data recommendations, see page(s) 86-88
- For complete insert programme, see page(s) 809, 810
- For ISO attribute explanation, see page 16
- KAPRS 90°

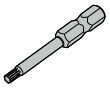
SQUARE 6

Seco's line of Square 6 shoulder milling cutters answers the need for added economy in square shoulder milling. This unique square shoulder milling cutter uses trigonal inserts with three cutting edges on each side – six total cutting edges – to lower the cost per cutting edge.

- With two different cutter family sizes - Insert size 04 and 08
- Wiper flats optimize surface finishes
- Multiple grades and geometries are available

Square 6™ – R217.96-04 – Metric



- For insert selection and cutting data recommendations, see page(s) 102-104
- For complete insert programme, see page(s) 840
- For ISO attribute explanation, see page 16
- KAPRS 90°

TURBO HELICAL

Seco's range of high-performance Turbo helical cutters offers high feeds, large depths of cut and high metal removal rates in contouring and profiling applications. These cutters provide a first choice for mixed production in all workpiece materials

- Insert size 06, cutter range 12-20 mm (0.75 inch)
- Insert size 10, cutter range 20-50 mm (1 inch)
- Insert size 12, cutter range 25-66 mm (1 - 2.5 inch)
- Insert size 16, cutter range 32-100 mm (1.5 - 3 inch)
- Insert size 18, cutter range 40-100 mm (1.5 - 4 inch)

Turbo 06 – R217.69-06 – Metric

- For insert selection and cutting data recommendations, see page(s) 127-128
- For complete insert programme, see page(s) 843
- For ISO attribute explanation, see page 16
- KAPRS 90°

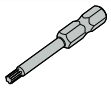
HELICAL SN8-13

Keep up with customer demand for lower part prices. The Seco Helical SN8-13 features double-sided helix inserts with eight cutting edges that significantly lower cost per edge to boost slotting, side milling and circular rough milling efficiency. Built for difficult applications involving ISO P, M, K and S materials, the cutters offer application-specific sub-family designs featuring left or right-hand helixes, half or full effective teeth options, two front insert and many radii choices for long tool life and maximum chip evacuation. Reliable and user-friendly, the Helical SN8-13 also eliminates incorrect indexing of front and helix inserts, reducing operator error.

- Range is built with 4 sub families built with SN13 helix insert:
- SN.U13 insert offering 8 cutting edges in 3 geometries and several grades
- R217/220.82: XO16 lead insert = First choice
- R217/220.82-H: AC15 lead insert = Heavy Duty, R220.69-15H replacement
- R217/220.81: AC15 lead insert = Low Power, R215/220.59 replacement
- R217/220.81-K: AC15 lead insert = Long reach, R215/220.59 replacement

R217.82-SNXO16 – Metric



- For insert selection and cutting data recommendations, see page(s) 165-166
- For complete insert programme, see page(s) 825, 848, 849
- For ISO attribute explanation, see page 16
- KAPRS 90°

SQUARE T4 HELICAL

The Square T4 Helical cutter range takes our diverse milling portfolio to the next level with tools that features tangentially mounted inserts, each having 4 cutting edges.

- T4 Helical Insert size 08, cutter range 25-54mm (1 inch)
- T4 Helical Insert size 12, cutter range 40-100mm (2 - 3 inch)

T4 – R217.94-08 – Metric

- For insert selection and cutting data recommendations, see page(s) 177-178
- For complete insert programme, see page(s) 809, 810
- For ISO attribute explanation, see page 16

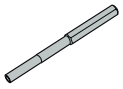
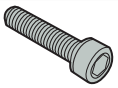
R215/220.59 HELICAL

Our comprehensive selection of high-performance helical milling cutters incorporate the latest geometries and grades to achieve high feed rates, large depths of cut and aggressive metal removal in contouring and profiling operations. The helix angle allows the cutter to absorb most of the end load so it smoothly enter and exit the workpiece.

- Cutter range 50-100 mm (2 inch)
- Many options for different types of mounting

R215.59-12.4 – Half effective – Metric





- For insert selection and cutting data recommendations, see page(s) 190-191
- For complete insert programme, see page(s) 807,821
- For ISO attribute explanation, see page 16

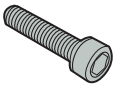
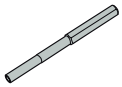
R220.69-15XH HELICAL

Helical mills for heavy duty, inserts with 4-cutting edges, single-sided inserts.

- Cutter range 100-125 mm (2 - 4 inch)
- Depth of cut <=160 mm (6.3 inch), max 30% ae
- Slotting depth max 50% DC
- Insert corner radii range 1.2-6.3 mm (.047 - .248 inch)

R220.69-15H – High feed rates – Metric





- For insert selection and cutting data recommendations, see page(s) 194-195
- For complete insert programme, see page(s) 807
- For ISO attribute explanation, see page 16

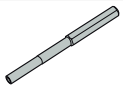
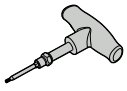
R235.15 HELICAL

Helical mills for high surface finish in square shoulder and contouring operations. Suitable for finishing operations.

- Cutter range 32-80mm, (1.25 - 3 inch)
- Depth of cut <=90 mm (3.5 inch)
- Max a_e = 1 mm

R235.15 – Finishing operations – Metric





- For insert selection and cutting data recommendations, see page(s) 199-200
- For complete insert programme, see page(s) 857
- For ISO attribute explanation, see page 16

Productivity

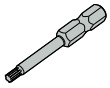
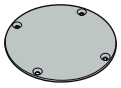
DOUBLE QUATTROMILL 14/22

Take full advantage of your machine tool's milling power for increased productivity with Seco's Double Quattromill™ face mill cutter for roughing and semi finishing. The 48-degree Double Quattromill provides a combination of lower cutting forces, less power consumption, higher feed rates and exceptional chip thinning. While on the other hand, the 71 degree is best when having to mill close to a wall or part fixture. The cutter is the perfect balance between the 48-degree version and a typical square shoulder mill in terms of cutting forces and depth of cut.

- Insert size 14, cutter range 50-315mm (2 - 12.50 inches)
- Insert size 22, cutter range 80-315mm (3 - 12.50 inches)
- 8 cutting edges, double-sided inserts

R220.54-14 metric





- For insert selection and cutting data recommendations, see page(s) 221-226
- For complete insert programme, see page(s) 835
- For ISO attribute explanation, see page 16
