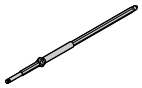
CT-PLANR/L – Toolholders/cassettes for inserts LNMX – Metric / *Inch*

CT-PLANR/L
KAPR = 90,0 °

R/L175.32

CTWS



- Right-hand version shown
- For inserts program, see page(s) 559, 560
- CT-PLANR/L 3223-19 are updated version of R/L175.32-3223-19. They have better manufacturing tolerances. R/L175.32-3223-19 will be deleted from the program in future.
- For ISO attribute explanation, see page 82

General Turning Inserts

Anything is possible when it comes to our broad selection of general turning grades and chipbreakers. Supporting inserts of different shapes, sizes and thicknesses, we developed each of these solutions with the same goal in mind: to boost the productivity and tool life in your turning applications. Covering all material groups, this comprehensive range allows you to achieve your goals in terms of material removal rates, tool life and surface finish.

- Duratomic® is an exclusive insert technology that brings an exceptional combination of wear resistance and edge toughness to a wide variety of Seco grades.
- Wide range of inserts grades to cover all workpiece material groups (SMG).
- Coated, uncoated cemented carbide and cermet grade inserts followed by Advanced material ceramic, cBN and diamond grade inserts.

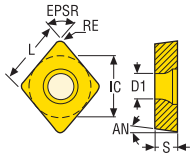
PCBN, PCD, Ceramics

Our team of advanced cutting materials experts is continuously looking for new ways to use PCBN, PCD and ceramics to develop Secomax™ cutting tools that bring exceptional productivity and tool life to the machining of difficult, highly abrasive materials.



- PCBN (Polycrystalline Cubic Boron Nitride), advanced cutting materal.
- PCD (Polycrystalline Diamond), level of hardness that is comparable to natural diamond.
- Ceramics, we have three grades that offer optimized wear resistance and toughness.

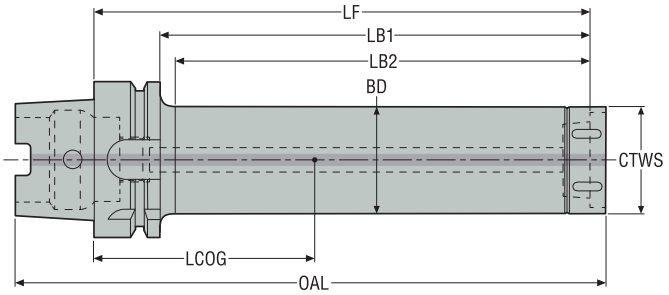
Vibration-damping solutions

Steadyline®

Steadyline® is a modular anti-vibration tooling system consisting of dampened bars, providing an easily exchangeable head with the accurate and reliable GL interface. To add applicability, the bars are highly capable both for problem-free long-overhang internal turning as well as rotating boring applications.

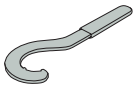


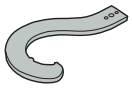
- Body diameters ∅25, ∅32, ∅40, ∅50, ∅60, ∅80, ∅100, ∅120, ∅150, ∅200 mm, ∅1.0”, ∅1.25”, ∅1.5”, ∅2.0”, ∅2.5”, ∅3.0” & ∅4.0”.
- Lengths 6XD, 8xD and 10xD.
- Seco-Capto™ C4, C5, C6, C8 connections, HSK-T/A 63, HSK-T/A 100.
- Cylindrical shanks-Both in Metric & Inch Sizes.

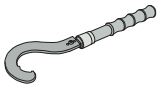
Modular GL-heads

Modular GL-heads for Steadyline® anti-vibration tooling are easily exchangeable toolholder heads with the accurate and reliable GL interface. GL turning heads are offered for problem-free long-overhang internal turning accommodating a comprehensive range of insert types, shapes and sizes for respective bar diameters.

GL – Steadyline®, HSK-T/A GL holders, body diameters 25, 32, 40 and 50 mm / *0.984, 1.260, 1.575 and 1.969 inch* – Metric / *Inch*







- With dynamic damping, ready to use
- For GL heads program, see page(s) 643-679
- With through coolant
- * Max. RPM only when used in rotating boring
- For ISO attribute explanation, see page 82

BA – Steadyline®, BA holders, body diameters 60 and 80 mm / *2.362 and 3.150 inch* – Metric / *Inch*

- With dynamic damping, ready to use
- For GL heads program, see page(s) 643-679
- For BA-to-GL adapters program, see page 637
- To hold BA to GL adapters with GL turning heads
- With through coolant
- * Max. RPM only when used in rotating boring
- For ISO attribute explanation, see page 82

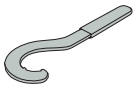
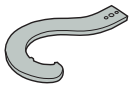
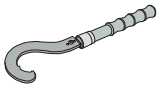
GL – Steadyline®, GL holders, body diameters 25, 32, 40 and 50 mm / *0.984, 1.260, 1.575 and 1.969 inch*, steel or carbide – Metric / *Inch*

Design 1



Design 2, without flat





- With dynamic damping, ready to use
- For GL heads program, see page(s) 643-679
- With through coolant channel and coolant supply connecting thread
- Dxx...-CR holders feature carbide-reinforced bodies to increase the rigidity of small diameter bars with 10xD overhang
- For ISO attribute explanation, see page 82

MDT - Multi Directional Turning

The Seco MDT (Multi-Directional Turning) is universally suitable for a variety of applications including grooving, profiling, turning, parting-off, and threading. The unique Secoloc™ clamping delivers the best stability and safety in addition to high productivity and performance. Applications include turning parts with many different diameters, complicated profiles and grooves, replacing the need for several standard and special tools with a single Seco MDT.

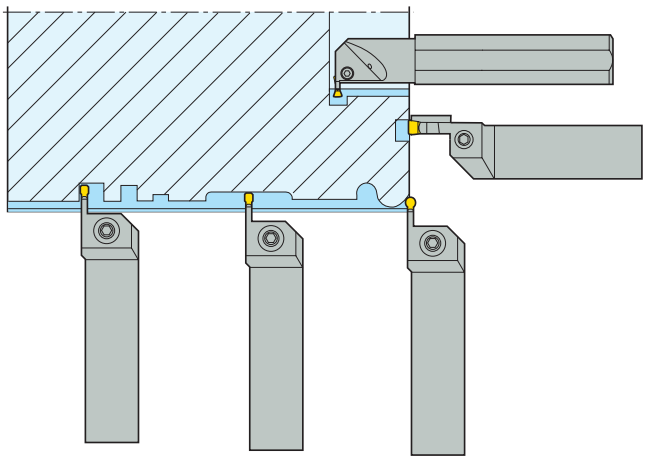
- Unique insert clamping method for superb stability.
- MDT is available also in combination with Jetstream Tooling®, a high-pressure coolant system.

General information

The Seco MDT (Multi Directional Turning) system consists of holders and inserts for external radial, external axial and internal machining.

The system can be used for:

– Turning



– Profiling

– Grooving

– Parting-off

– Threading

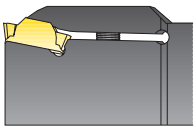
Suitable applications are turning of parts with many different diameters, complicated profiles and grooves. For complex parts of this type several standard and special tools can be replaced by one Seco MDT tool. Savings can be achieved through fewer tool changes and reduced tool stock.

Seco MDT has a unique insert clamping method – Secoloc™.

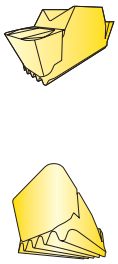
A combination of V-shaped top clamp and serrated contact surfaces between the underside of the insert and the toolholder offers superb stability.

The relatively long insert also increases the stability.

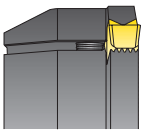
The excellent stability gives a number of benefits



– Improved process safety



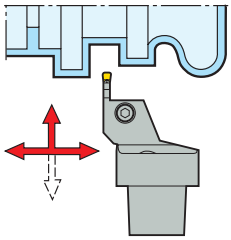
– Increased metal removal capacity/productivity

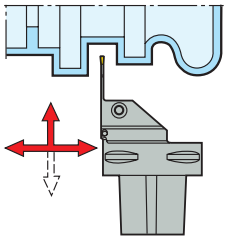


– Improved surface finish

– Reduced vibration risk

– Good repeatability (±0,03 mm)





Seco Jetstream Tooling®

Seco Jetstream Tooling® holders feature a rake face coolant jet, that may provide even better chip control and significantly longer tool life. For more information on Jetstream Tooling® and accessories, please see page(s) 85-89 and 1026.

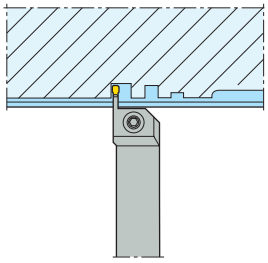
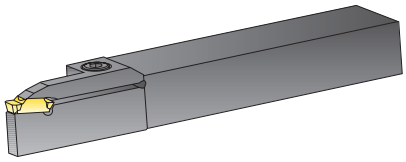
Toolholders

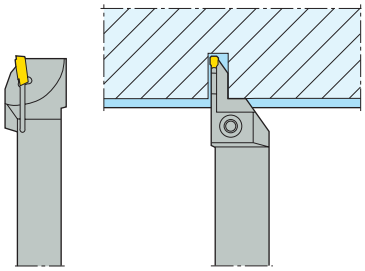
CFIR/L – Basic choice



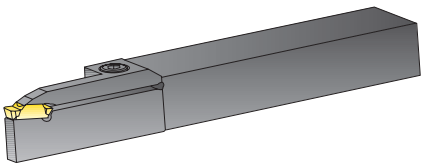
- For external turning, profiling and grooving
- Maximum working depth 3 x the insert width (can be limited by double ended inserts)
- Size 16 – For general machining
- Size 30 – For heavy machining



CFMR/L – Long reach

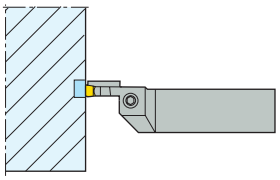


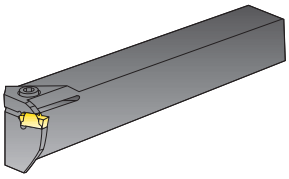
- For external turning, profiling and grooving
- Maximum working depth 5 x the insert width
- Single ended inserts should be used (CFMR/L, CFSR/L)
- Size 16 – For general machining
- Size 28 – For general machining
- Size 30 – For heavy machining



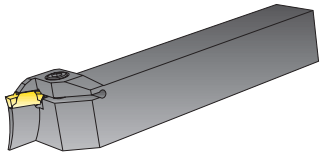
CFOR/L, CFPR/L, CFSR/L, CFTR/L, CFZR/L – Extra long reach, 6 x insert width up to 12,5 x insert width

- For grooving and parting-off
- Single ended inserts should be used (CFOR/L, CFPR/L, CFTR/L)
- Size 16 – For general machining
- Size 19 – For small part machining
- Size 28 – For general machining



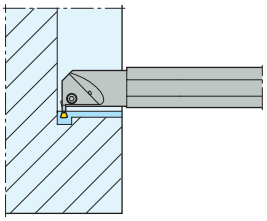


CGIR/L, CFIR/L, CFOR/L – Axial machining

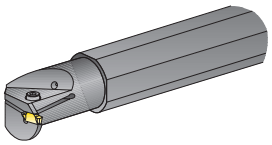


- For axial turning, profiling and grooving
- Maximum working depth 3-6 x the insert width (can be limited by double ended inserts).
- These toolholders demand that the first cut must be made between two specified diameters (see code key)
- Size 16 – For general machining
- Size 30 – For heavy machining

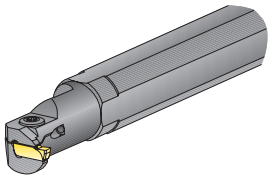
CGIR



CFIL

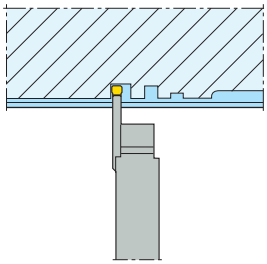


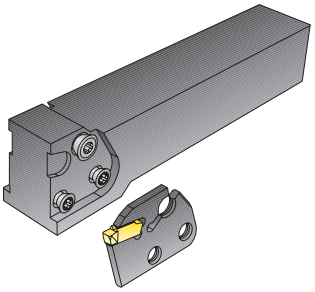
CG.IR/L – Internal machining



- For internal turning, profiling and grooving
- Maximum working depth 1–3,5 x the insert width for size 13
- Maximum working depth 3 x the insert width for size 16
- Maximum working depth 2,5–3,5 x the insert width for size 19
- For through coolant supply
- Size 13 – For machining in small bore sizes
- Size 16 – For general machining
- Size 19 – For machining in small bore size

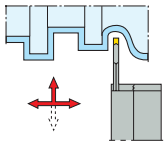
MDT16





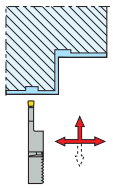
MDT13

Single ended blades

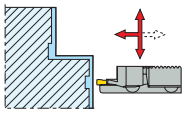


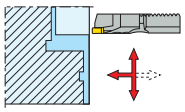
- Holder with both right and left hand blade mounting available
- Size 16 – For general machining

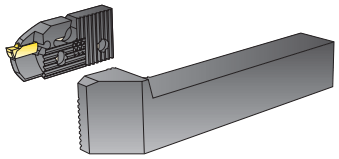
Double ended blades



- To be used in standard 150.10 toolblocks
- Size 16 – For parting-off







Modular holders, axial/radial

- For axial turning, profiling and grooving
- Maximum working depth 3-6 x the insert width (can be limited by double ended inserts).
- These toolholders demand that the first cut must be made between two specified diameters (see code key)
- Size 16 – For general machining
- Size 30 – For heavy machining

MDT – Inserts

LCMF – Basic choice

Double ended
Economy (cutting edges at both ends)
Size 13 – For machining in small bore sizes and axial machining at small diameters
Size 16 – For general machining
Size 19 – For small part machining
Size 28 – For general machining
Size 30 – For heavy machining

MDT13

MDT16
MDT30

Size 30 – For heavy machining

MDT13

MDT16
MDT30

LCG.

Special applications
Standard and (customer specified) tailor made profiles
Double or single ended
With or without chipbreaker

Size 13 – For machining in small bore sizes and axial machining at small diameters
Size 16 – For general machining
Size 30 – For heavy machining

FT (Fine Turning)

For fine turning

For deep grooving

FT 19 and 28 (Fine Turning)

For parting-off

For deep grooving

MT (Medium Turning)

For medium turning

For shallow grooving

MG (Medium Grooving)

For medium turning

For deep grooving

For parting-off

MC (Medium Cut-off)

For parting-off tubes and small diameter workpieces

For deep grooving

GG (Grooving Ground)

Ground chipgroove

For medium grooving, complement to FT for precision grooves

GS (Grooving Sharp)

Sharp edge

For fine grooving in non-ferrous materials/ superalloys

Precision grooves

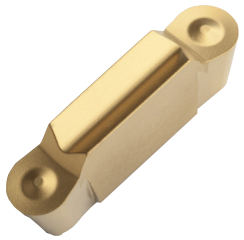
A55/A60, G55/G60, ISO

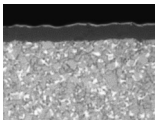
For threading applications

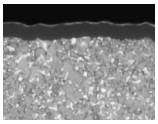
MP (Medium Profiling)

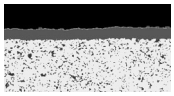
For medium profiling

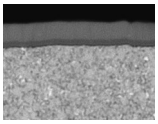
For medium turning

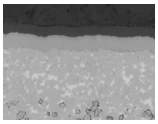


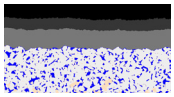


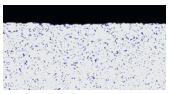


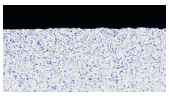




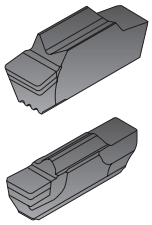


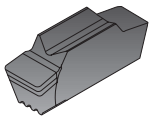


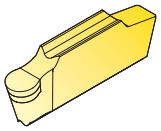


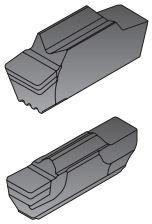


RP (Round Profiling)









For fine and medium profiling, turning and grooving

Sharp periphery ground edges

For superalloys, titanium alloys and non-ferrous materials

Grades		
CP200		PVD-coated, hard micrograin grade with great wear resistance, intended for grooving, parting-off and profiling of superalloys, titanium alloys and hardened steels. A more wear resistant alternative to grade 890. (Ti,Al)N + TiN
CP500		Tough versatile PVD-coated micrograin grade intended for grooving in a variety of workpiece materials. Universal choice. (Ti,Al)N + TiN
CP600		Very tough PVD-coated fine-grain grade intended for deep grooving and parting-off at low to moderate cutting speeds. Well-suited in deep grooving and in interrupted cuts. Tougher alternative to CP500. (Ti,Al)N + TiN
TGH1050		Very hard supermicrograin grade intended for partly hardened steel components as well as generally workpiece materials such as superalloys and cast-iron and due to remarkable edge toughness it also provides high performance in interrupted cuts and hard-surface removal. Ti-Al-Si-N nanolaminate coating
TGK1500		Wear-resistant, hard Duratomic® CVD-coated grade intended for grooving and profiling of grey cast iron and nodular cast iron. $Ti(C,N) + Al_2O_3$
TGP25		A wear-resistant Duratomic® CVD-coated grade intended for grooving, turning and profiling of steels at high cutting speeds. $Ti(C,N) + Al_2O_3$
883		Uncoated, hard grade intended for grooving, parting-off and profiling of superalloys, titanium alloys, hardened steels and non-ferrous materials.
890		Uncoated, very hard micrograin grade intended for grooving and profiling of superalloys, titanium alloys, hardened steels and non-ferrous materials. More wear resistant alternative to grade 883.

Grades, PCBN	
CBN010 	Single-ended inserts with brazed tip, intended for hardened steels and Ni-based superalloys. Composition: 50% cBN content grade with an average grain size of 2 µm and a TiC ceramic binder. Coating: No coating.
CBN170 	Single-ended inserts with brazed tip, intended for Ni-based superalloys. Composition: 65% cBN content grade with an average grain size of 2 µm and a TiCN+SiCw ceramic binder. Coating: No coating.
CBN170C 	Single-ended inserts with brazed tip, intended for Ni-based superalloys. Composition: 65% cBN content grade with an average grain size of 2 µm and a TiCN+SiCw ceramic binder. Coating: (Ti,Si)N
CBN200 	Single-ended inserts with brazed tip, intended for perlitic cast iron and hardened steels. Composition: 90% cBN content grade with an average grain size of 3-6 µm and a Al ceramic binder. Coating: No coating.

Application recommendations

Easy conditions: pre-machined surface, shallow grooves etc.
Difficult conditions: raw surface, deep grooves etc.

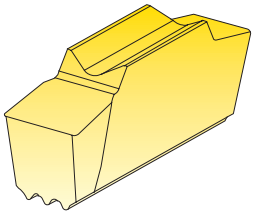
MDT Grades – Secolor



The chart below shows application areas for grades available in the MDT system.
The black areas in the chart indicate a grade's main ISO application groups and the white areas indicate other supplementary application groups.

Indicative ISO classification of the grades

Steel **P**	All kinds of steel and cast steels except stainless steels with austenitic structure.	P01, P10, P20, P30, P40, P50
Stainless steel **M**	Stainless austenitic and austenitic/ferritic steel and cast steel.	M01, M10, M20, M30, M40
Cast iron **K**	Grey cast iron, cast iron with spheroidal graphite, malleable cast iron.	K01, K10, K20, K30, K40
Non-ferrous metals **N**	Aluminium and other nonferrous metals.	N01, N10, N20, N30
Superalloys and titanium **S**	Heat resistant special alloys based on iron, nickel and cobalt, titanium and titanium alloys.	S01, S10, S20, S30
Hard materials **H**	Hardened stel and cast iron materials, chilled cast iron.	H01, H10, H20, H30

Remember to check the toolholder clearance before using these inserts.

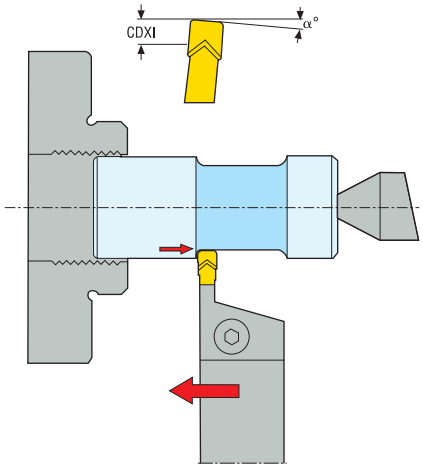
Principles

Principles

During turning the axial forces deflect the tool generating a necessary trailing edge clearance angle.

This angle depends on

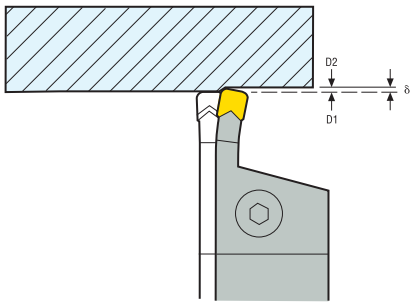
– Feed



– Depth of cut

– Tool overhang

– Insert width

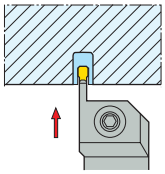


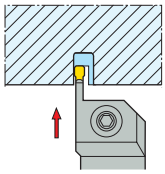
– Cutting speed

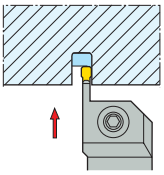
– Workpiece material

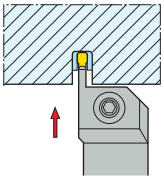
The deflection arising during turning causes a minor change of the actual tool length. This influences the received diameter on the workpiece.

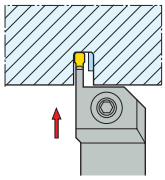
The exact amount can be figured by running a test piece. First make a groove and then a turning operation to the same diameter with the selected cutting data. Compare the two different diameters and use the formula to calculate a compensation measure.

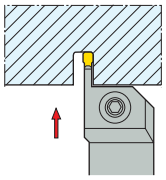










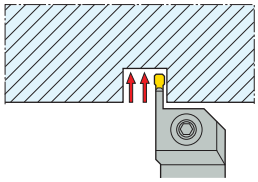


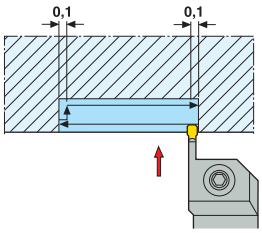
$$\delta = \frac{D1 - D2}{2}$$

Technical tips

Use the following technical tips for a favourable cutting process considering chipbreaking, cutting forces and tool life.

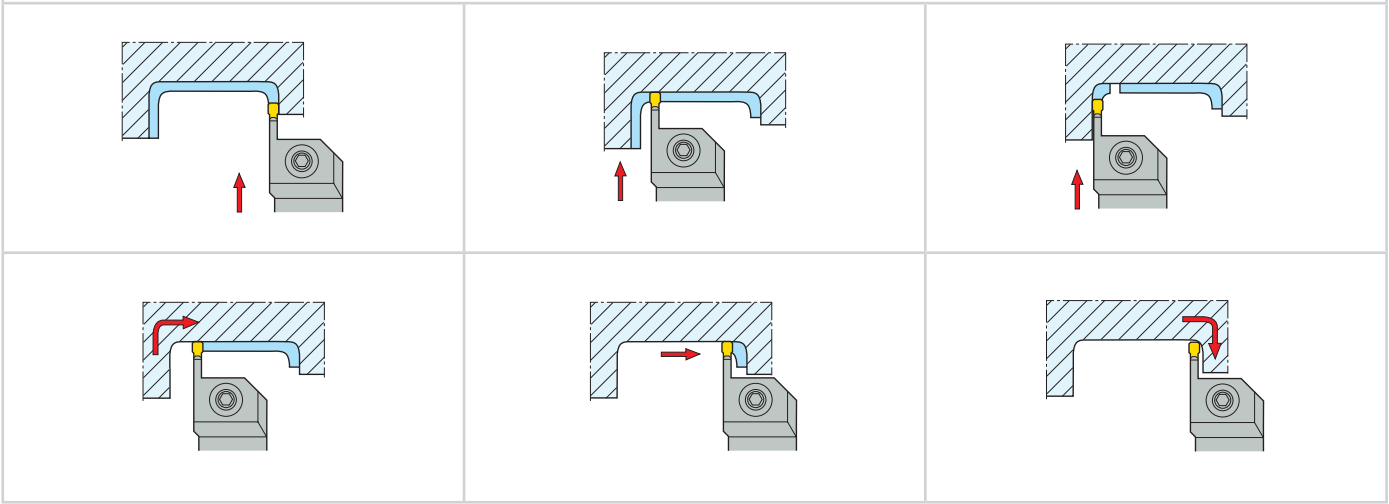
Machining a deep groove





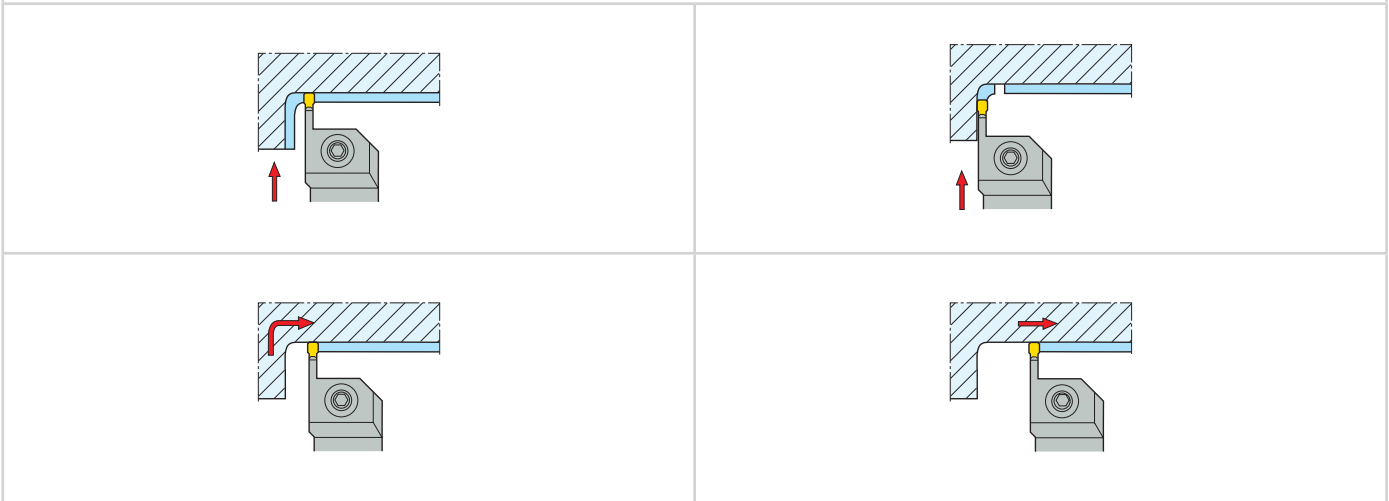
– Make a central groove to half of the total depth.
– Make infeeds at both sides to the same depth.
– Machine a central groove to full depth.
– Make infeeds at both sides to the full depth.
– Always outfeed, do not rapid traverse.

Roughing a recess



If the depth is larger than the width
– Use successive infeeds to required diameter.
– Increment a distance of the insert width – 2 x the insert corner radius to get a flat bottom surface.
– Always outfeed, do not use rapid traverse.

If the width is larger than the depth.
– Start with an infeed at one end.
– Use successive alternating turning with infeeds at the end.
– Release the tool deflection after turning before infeeding (reverse feed and reposition the insert before infeed – 0,1 mm).

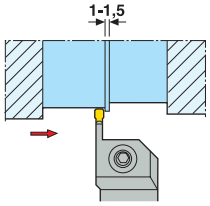


Finishing a recess with corner radius or chamfer

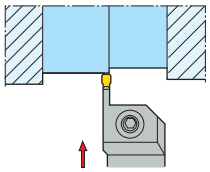
– Machine the face down to the end point of the radius or chamfer.
– Make a groove to the required depth at the end point of the radius or chamfer.
– Machine down to the end point of the radius or chamfer.
– Machine the radius or chamfer.
– Machine the diameter until the end point of the radius or chamfer is reached (remember to compensate for the deflection).
– Machine the radius or chamfer.

Machining a large corner radius or chamfer

– Make a groove to the required depth at the end point of the radius or chamfer.
– Machine the face down to the end point of the radius or chamfer.
– Machine the radius or chamfer.
– Continue with turning starting from the groove (remember to compensate for the deflection).



Eliminating a hanging ring

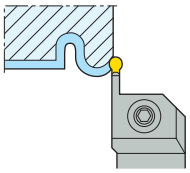


Turning towards the end of a component or towards a recess sometimes produces a hanging ring.

To avoid this

– Stop the turning operation 1,0–1,5 mm before the end of the component or the recess.

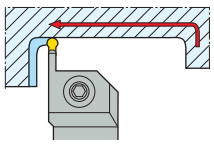
– Plunge down to the turned diameter.



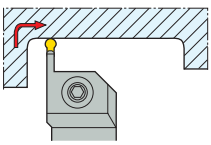
Profiling with round inserts

– The cutting depth should be maximum 0,4 x the insert diameter.

– There is no requirement to generate a trailing edge clearance angle as the geometry will provide that.



Roughing a recess with round inserts

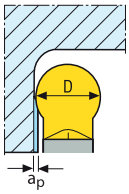


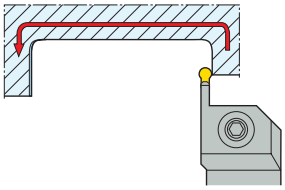
– Machine the face down to the end point of the radius or chamfer.

– Track around the radius.

– Turn to the end point of the radius or chamfer on the other side.

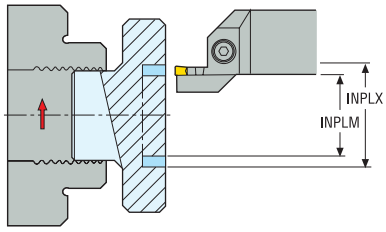
– Machine down the other side and track around the radius or chamfer.



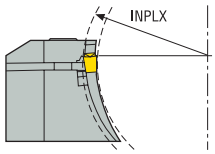


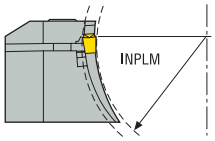
Finishing a recess with round inserts

– Make the cut in one continuous movement.
– Notice the maximum cutting depth allowed during outfeeding (see table).



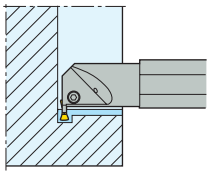
D mm	a_p mm
2	0,12
3	0,15
4	0,20
5	0,22
6	0,25
8, 10	0,40





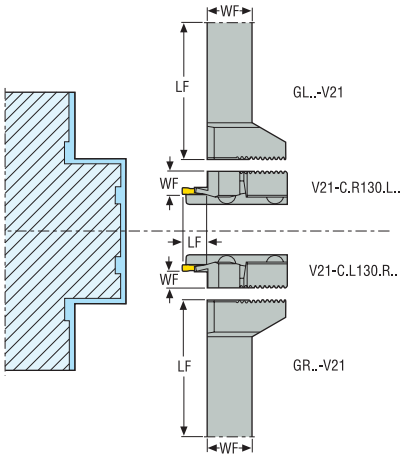
Axial machining

– In axial grooving operations the tool must be adapted to the radius of the groove.
– The toolholder code tells the maximum and minimum diameters that can be handled (see code key).
– The diameter measured on the outside of the blade (INPLX) determines the largest diameter of initial plunge.
– The diameter measured on the inside of the blade (INPLM) determines the smallest diameter of initial plunge.
– This applies to the initial groove only. Changing to turning means no general restrictions besides collision risk if machining towards centre.



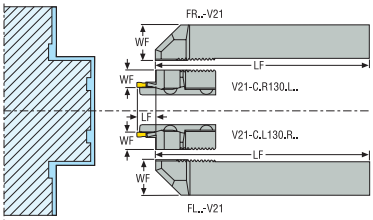
Internal machining

– Generally the same technique as for external machining should be used.
– In blind holes problems can occur with chip evacuation. To avoid that start with making a groove at the inner wall and turn towards the outside.

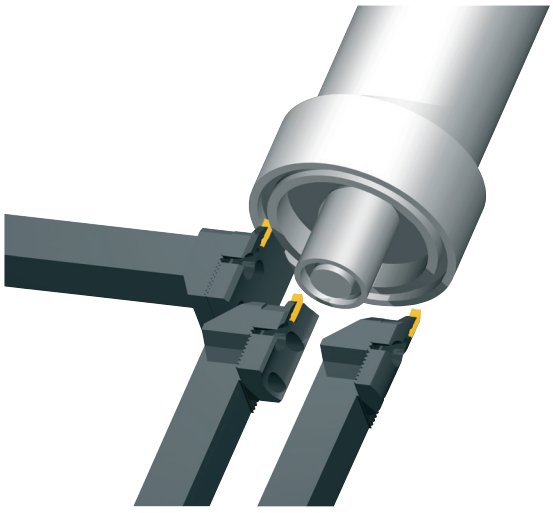


Modular holders

Calculation of dimensions after mounting



Example, left hand version (L):
– Blade holder G**L** (alternative Seco-Capto™ G**L**).
– Blade type V21-C.**R**130.**L**..
LF = LF holder + WF blade
WF = WF holder + LF blade



Example, right hand version (R):
– Blade holder G**R** (alternative Seco-Capto™ G**R**).
– Blade type V21-C.**L**130.**R**..
LF = LF holder + WF blade
WF = WF holder + LF blade

Example, right hand version (R):
– Blade holder F**R** (alternative Seco-Capto™ F**R**).
– Blade type V21-C.**R**130.**L**..
LF = LF holder + LF blade
WF = WF holder + WF blade

Example, left hand version (L):
– Blade holder F**L** (alternative Seco-Capto™ F**L**).
– Blade type V21-C.**L**130.**R**..
LF = LF holder + LF blade
WF = WF holder + WF blade

Calculation of dimensions after mounting

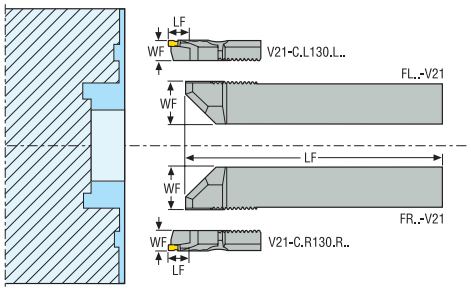
Example, left hand version (L):

– Blade holder F**L** (alternative Seco-Capto™ F**L**).

– Blade type V21-C.**L**130.**L**..

LF = LF holder + LF blade

WF = WF holder + WF blade



Example, right hand version (R):

– Blade holder F**R** (alternative Seco-Capto™ F**R**).

– Blade type V21-C.**R**130.**R**..

LF = LF holder + LF blade

WF = WF holder + WF blade

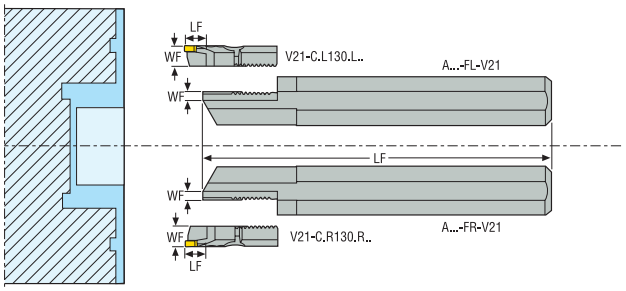
Example, left hand version (L):

– Blade holder A..F**L** (alternative Seco-Capto™ A..F**L**).

– Blade type V21-C.**L**130.**L**..

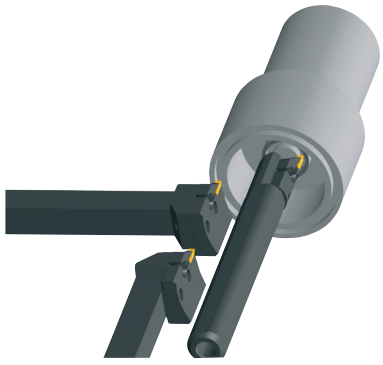
LF = LF holder + LF blade

WF = WF holder + WF blade



Example, right hand version (R):

– Blade holder A..F**R** (alternative Seco-Capto™ A..F**R**).



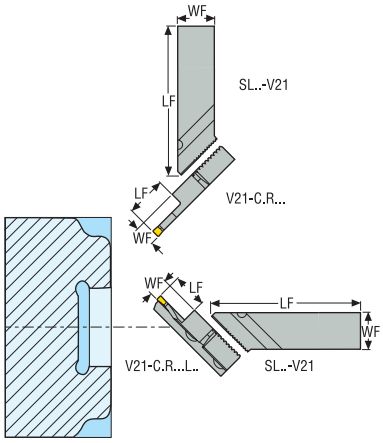
– Blade type V21-C.**R**130.**R**..

LF = LF holder + LF blade

WF = WF holder + WF blade

Bars A25R-F... can enter a minimum diameter DCINN ≥ 25 mm.
Bars A32S-F... can enter a minimum diameter DCINN ≥ 32 mm.

Calculation of dimensions after mounting



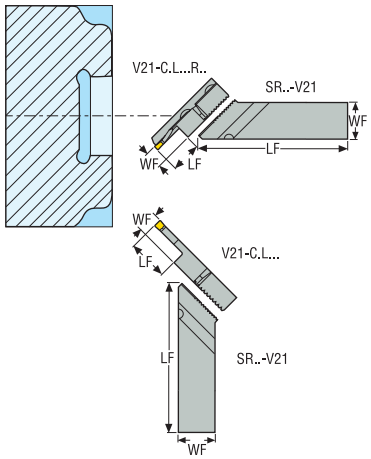
Example, left hand version (L):

– Blade holder S**L** (alternative Seco-Capto™ S**L**).

– Blade type V21-C.**R**....or V21-C.**R**....**L**..

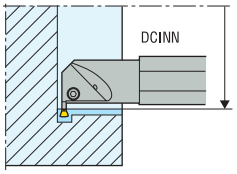
LF = LF holder + 0,71 x (WF blade + LF blade)

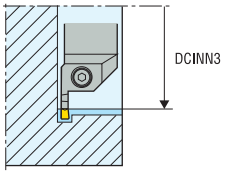
WF = WF holder + 0,71 x (LF blade - WF blade)

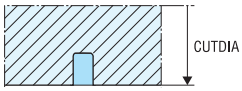


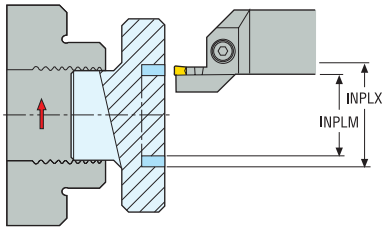
Example, right hand version (R):

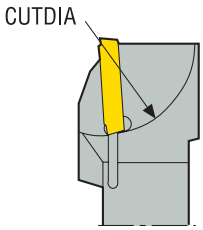
– Blade holder S**R** (alternative Seco-Capto™ S**R**).





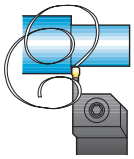


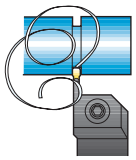


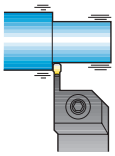


– Blade type V21-C.**L**....or V21-C.**L**....**R**..

LF = LF holder + 0,71 x (WF blade + LF blade)







WF = WF holder + 0,71 x (LF blade - WF blade)

Machining problems

Machining problems	
Chipbreaking problems/ turning 	Increase feed rate or cutting depth. Use narrower insert with smaller radius.
Chipbreaking problems/ grooving 	Reduce the cutting speed. Increase the feed rate. Use interrupted feed.
Vibrations 	Change the cutting speed. Increase the feed rate. Reduce the cutting depth. Improve the stability of the tool and workpiece. Select an insert with smaller radius.

Tool life problems

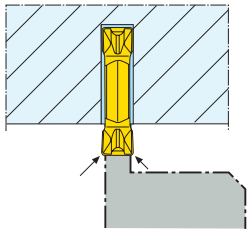
Tool life problems			
Breakage 	Reduce the feed rate. Reduce the cutting depth. Select a tougher grade. Select an insert with larger radius.	Plastic deformation 	Reduce the cutting speed. Reduce the feed rate. Use coolant. Select a more wear resistant grade. Select an insert with larger radius.
Rapid flank wear 	Reduce the cutting speed.	Built-up edge 	Increase the cutting speed. Increase the feed rate. Do not use coolant.
Rapid crater wear 	Reduce the cutting speed. Reduce the feed rate. Use coolant. Select a more wear resistant grade.	Chip hammering 	Change the feed rate. Change the cutting depth.
Chipping 	Increase the cutting speed. Reduce the feed rate. Select a tougher grade.	Comb cracks 	Reduce the cutting speed. Reduce the feed rate. Use abundant coolant flow or no coolant at all.
Notch wear 	Reduce the cutting speed. Reduce the feed rate.		

Workpiece out of tolerance

Workpiece out of tolerance			
Poor surface finish 	Reduce the feed rate. Increase the cutting speed. Reduce the cutting depth. Use coolant. Improve the stability of the tool and workpiece.	Inaccurate square facing 	Final facing should be made as radial machining from outside to centre.
Diameter out of tolerance 	Check the tool length compensation measure. Reduce the cutting speed. Select a more wear resistant grade.	Repeatability problems 	Keep machining conditions constant. Check the insert wear.
Diameter variation 	After grooving the tool must be retracted in accordance with the compensation measurement before proceeding with turning. Keep machining conditions constant during turning operation.		

Working depths

These working depths can be limited when using double ended inserts because of their design.



L...13 = CDXI max 11

L...16 = CDXI max 14

L...19 = CDXI max 16

L...28 = CDXI max 26

L...30 = CDXI max 28

Torque values for clamping screws

TCEI05..	6,0	
TCEI06..	8,0	
TCEI08..	10,0	
TCEI10..	15,0	

General recommendations

– Use medium to high feeds for general grooving.
– Use medium to low feeds for precision grooving.
– Always use reverse feed instead of rapid traverse out of grooves.
– Do not use too low cutting depths and feed rates for finishing and semi-finishing turning operations.
– The appropriate deflection must be achieved. Minimum cutting depths and feed rates are shown in the table below.
– When profiling with round inserts do not use cutting depths over 0,4 x the insert diameter.
– Lower the cutting data when using holders with reach CDX ≥5 x CW because the extra length makes them deflect more.
– Maximum overhang with CGGR/L holders should be 3 x the tool diameter.

Minimum cutting depth (a_p) and feed rate (f)

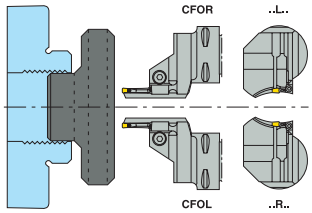
C.-CFOR...L...JET, C.-CFOL...R...JET – Toolholders for inserts LCGF, LCGN, LCMF, LCMR – Metric / *Inch*

C.-CFOR/L
KAPR = 90,0 °

CFOR...L...JET, CFOL...R...JET



CTWS

- Right-hand version with left-hand blade shown
- For inserts program, see page(s) 858-863, 873-874
- For holder code key, see page(s) 699
- For more information on Jetstream Tooling® and accessories, see page(s) 38, 85-89, 1026
- Max depth of cut for double-sided LCGF/LCMF16.. = 14 mm / *0.551 inch*, LCGF/LCMF30.. = 28 mm / *1.102 inch*
- CW = indicative Cutting Width, may vary depending on the chosen insert
- For ISO attribute explanation, see page 82

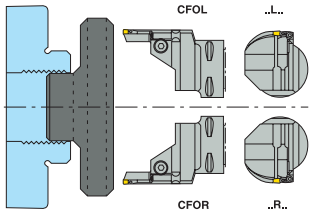
C.-CFOR...R...JET, C.-CFOL...L...JET – Toolholders for inserts LCGF, LCGN, LCMF, LCMR – Metric / *Inch*

C.-CFOR/L
KAPR = 90,0 °

CFOR...R...JET, CFOL...L...JET



CTWS

- Right-hand version with right-hand blade shown
- For inserts program, see page(s) 858-863, 873-874
- For holder code key, see page(s) 699
- For more information on Jetstream Tooling® and accessories, see page(s) 38, 85-89, 1026
- Max depth of cut for double-sided LCGF/LCMF16.. = 14 mm / *0.551 inch*, LCGF/LCMF30.. = 28 mm / *1.102 inch*
- CW = indicative Cutting Width, may vary depending on the chosen insert
- For ISO attribute explanation, see page 82

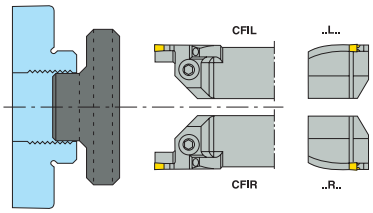
CFIR...R...JET, CFIL...L...JET – Toolholders for inserts LCGF, LCGN, LCMF, LCMR – Metric



CFIR/L
KAPR = 90,0 °

CTWS

- Right-hand version with right-hand blade shown
- For inserts program, see page(s) 858, 861-863
- For holder code key, see page(s) 701-702
- For more information on Jetstream Tooling® and accessories, see page(s) 38, 85-89, 1026
- Max depth of cut for double-sided LCGF/LCMF30.. = 28 mm
- CW = indicative Cutting Width, may vary depending on the chosen insert
- For ISO attribute explanation, see page 82

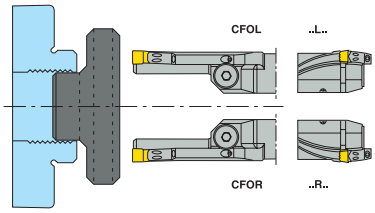
CFOR...R...JETI, CFOL...L...JETI – Toolholders compatible with JETI adapters for inserts LCGF, LCGN, LCMF, LCMR – Metric



CTWS

CFOR/L
KAPR = 90,0 °

- Right-hand version with right-hand blade shown
- For inserts program, see page(s) 858-863, 873-874
- For suitable adapter, see page(s) 986-997
- For holder code key, see page(s) 701-702
- For more information on Jetstream Tooling® and accessories, see page(s) 38, 85-89, 1026
- Max depth of cut for double-sided LCGF/LCMF16.. = 14 mm
- CW = indicative Cutting Width, may vary depending on the chosen insert
- For ISO attribute explanation, see page 82

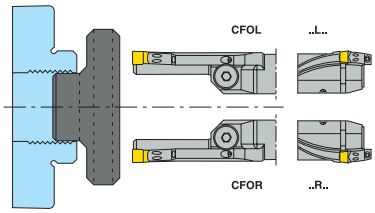
CFOR...R...JET, CFOL...L...JET – Toolholders for inserts LCGF, LCGN, LCMF, LCMR – Metric



CFOR/L
KAPR = 90,0 °

CTWS

- Right-hand version with right-hand blade shown
- For inserts program, see page(s) 858, 861-863
- For holder code key, see page(s) 701-702
- For more information on Jetstream Tooling® and accessories, see page(s) 38, 85-89, 1026
- Max depth of cut for double-sided LCGF/LCMF30.. = 28 mm
- CW = indicative Cutting Width, may vary depending on the chosen insert
- For ISO attribute explanation, see page 82

C.-CFIR/L – Toolholders for inserts LCGN, LCMF, LCMR – Metric / *Inch*

C.-CFIR/L
KAPR = 90,0 °

C.-CFIR/L

CTWS

- Right-hand version shown
- For inserts program, see page(s) 858-863, 873-874
- For holder code key, see page(s) 699
- Max depth of cut for double-sided LCGF/LCMF16.. = 14 mm / *0.551 inch*, LCGF/LCMF30.. = 28 mm / *1.102 inch*
- CW = indicative Cutting Width, may vary depending on the chosen insert
- For ISO attribute explanation, see page 82

CFMR/L – Toolholders for inserts LCGF, LCGN, LCMF, LCMR – Inch

CFMR/L
KAPR = 90,0 °

CFMR/L

CTWS

- Right-hand version shown
- For inserts program, see page(s) 858-871, 873-874
- For holder code key, see page(s) 701-702
- Max depth of cut for double-sided LCGF/LCMF16.. = *0.551 inch*, LCGF/LCMF30.. = *1.102 inch*
- CW = indicative Cutting Width, may vary depending on the chosen insert
- For ISO attribute explanation, see page 82

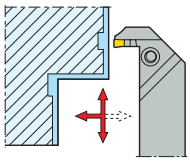
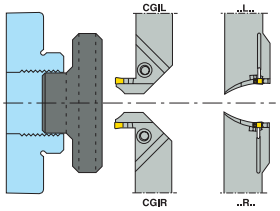
CGIR/L – Toolholders for inserts LCGF, LCGN, LCMF, LCMR – Metric



CTWS



CGIR/L

CGIR/L
KAPR = 90,0 °

- Right-hand version with right-hand blade shown
- For inserts program, see page(s) 858-863, 873-874
- For holder code key, see page(s) 701-702
- Max depth of cut for double-sided LCGF/LCMF16.. = 14 mm, LCGF/LCMF30.. = 28 mm
- CW = indicative Cutting Width, may vary depending on the chosen insert
- For ISO attribute explanation, see page 82

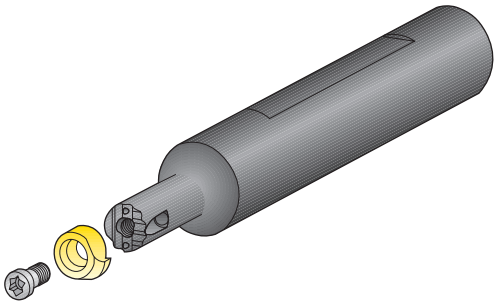
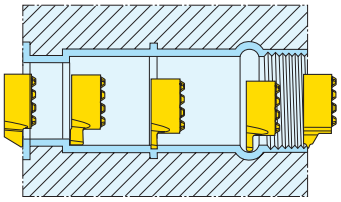
Mini-Shaft™

The Seco Mini-Shaft™ system consists of holders and inserts for internal turning, grooving, precision grooving, profiling, backfacing and threading. It can be used in holes as small as ∅8 mm/ 0.315 inch (Mini-Shaft™ 08) or ∅11 mm/ 0.433 inch (Mini-Shaft™ 11). Seco Mini-Shaft™ also features a unique connection, with a double serration, making the connection both stable and secure. It also gives very good repeatability (±0.02 mm/ 0.0008 inch).

- All toolholders are used for both R and L-handed inserts
- To be used in holes as small as ∅8 mm/ 0.315 inch (Mini-Shaft™ 08) or ∅11 mm/ 0.433 inch (Mini-Shaft™ 11).
- Through coolant possibility.



General information



General information

Seco Mini-Shaft™ consists of holders and inserts for internal turning, grooving, precision grooving, profiling, backfacing and threading. To be used in holes as small as ∅8 mm *0.315 inch* (Mini-Shaft™ 08) or 11 mm *0.433 inch* (Mini-Shaft™ 11).

Seco Mini-Shaft™ features a new type of joint, with a double serration, which makes the connection both stable and secure.
It also gives very good repeatability (±0,02 mm *0.0008 inch*).

All toolholders are used for both R and L -handed inserts, and have through coolant possibility.

Technical information

Tool blocks, adapters

Holders should be mounted in standard turrets. Sometimes there is a need for additional set-up devices, such as tool blocks and adapters.

Shown opposite is the Seco solution for bars to be mounted into a turret for standard square shanks 131-.. to be used together with fully cylindrical shanks (-R) and shanks with flats.

Adapters SL16.. to be used with shanks with flats.

Please see page(s) 1009.

Collet chucks

Fully cylindrical shanks (-R) can also be mounted in collet chucks.

– Use collets or reduction sleeves for hydraulic chucks

– Round shanks combined with collets can prevent vibrations

– Shanks with flats may not be used in collets – as there is a risk of damaging the collet

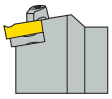
Grooving

The Seco K-Style system is intended for radial and axial as well as external and internal precision grooving. The range of grooving inserts includes inserts for most groove profiles, such as circlip profiles, O-ring profiles, thread undercut and radius grooves.



- All toolholders are used for both R and L-handed inserts
- Radial external, radial internal and axial grooving.
- Toolholders have replaceable shims designed to protect the insert seat.

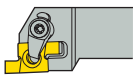
Toolholders

C	E	R	25	25	M	14	Q	HD
1	2	3	4	5	6	7	8	9

1. Insert clamping

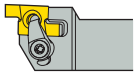
C
Clamp

2. External/Internal



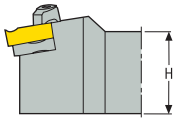
E = External

N = Internal



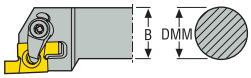
EA = External axial

3. Version

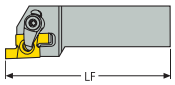


R

L



4. Shank height



12 = 12 mm
16 = 16 mm
20 = 20 mm
etc.

5. Shank width/diameter

12 = 12 mm
16 = 16 mm
20 = 20 mm
etc.

6. Tool length

H = 100 mm
K = 125 mm
M = 150 mm
P = 170 mm
R = 200 mm

H = 100 mm
K = 125 mm
M = 150 mm
P = 170 mm
R = 200 mm

7. Cutting edge length

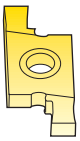
If the cutting edge length consists of only one digit, the designation should start with a 0.

Example:
Cutting edge length (LIG) = 9,525 mm
Symbol = 09

8. Other information

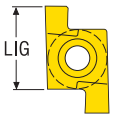
A = Steel with coolant passage

D = Holder for deep grooving

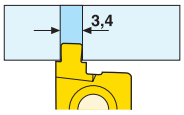


Q = Toolholder/cranked

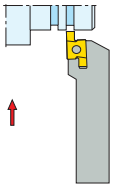
9. Internal designation

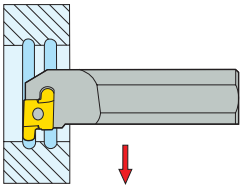


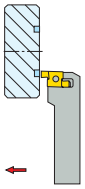
HD = Heavy Duty



Inserts



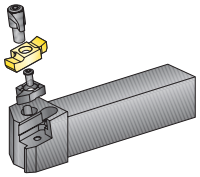




14	E	R	3.4	FG
1	2	3	4	5

1. Cutting edge length	2. External/Internal	3. Version
 If the cutting edge length consists of only one digit, the designation should start with a 0. Example: Cutting edge length (LIG) = 9,525 mm Symple = 09	E = External N = Internal EA = External axial	R  L 

4. Groove width	5. Standard grooves
 Example: 3.4 = 3,4 mm	FG = For radial grooves (CW x 1) FD = For radial deep grooves (CW x 2) D76 = For thread undercuts R = For radius ST = For static O-rings DY = For dynamic O-rings AX = For axial O-rings FA = For axial grooves (CW x 1)



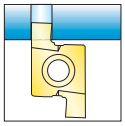
Grooving – Precision grooves, depth/width ratio 1:1 (2:1)

Radial external	Radial internal	Axial
		

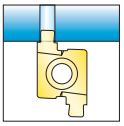
Toolholders

The toolholder system is based on the Snap Tap threading system. The toolholders have replaceable shims designed to protect the insert seat.

The system is intended for radial external and internal grooving and for axial grooving. The system enables axial grooves from 16 mm outside diameter and internal radial grooves down to 13 mm diameter to be turned.

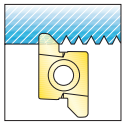


Inserts

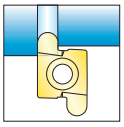


The range of grooving inserts includes inserts for most groove profi les, such as circlip profi les, O-ring profi les, thread undercut and radius grooves. The range of grooving inserts can be used for grooves with a depth/width ratio of up to 1:1.

Inserts with designation FD can be used for grooves with a depth/width ratio of up to 2:1.

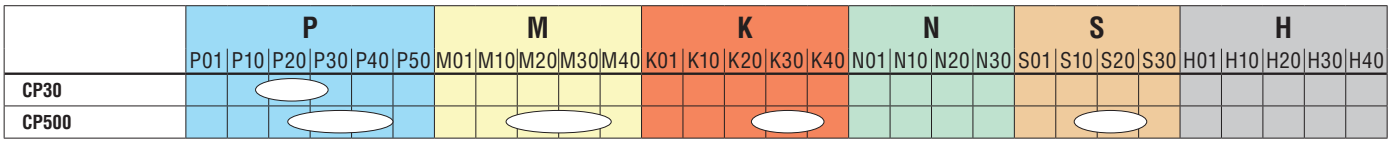


Lockring



O-ring

Thread undercut



Radius

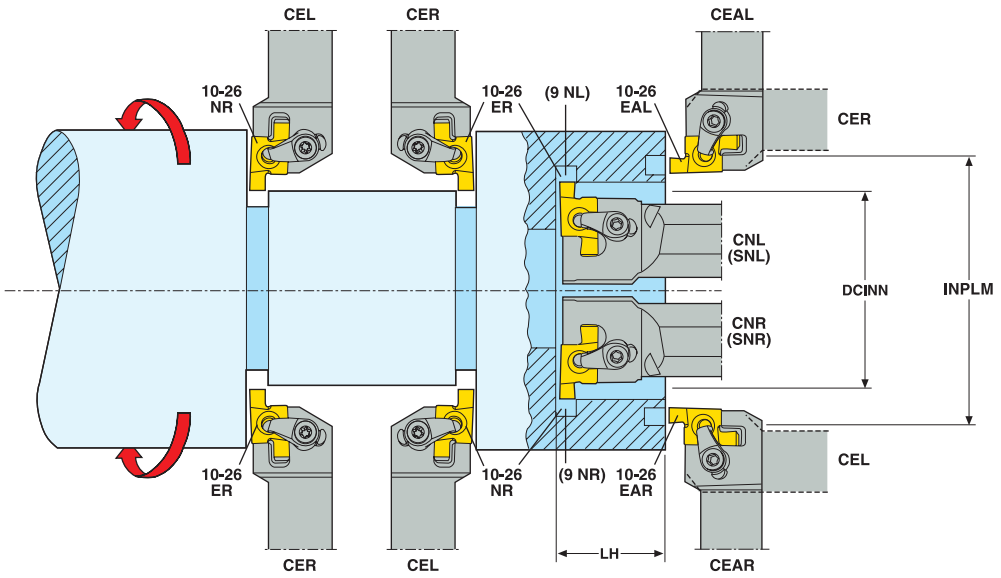
Indicative ISO classification of the grades

Steel **P**	All kinds of steel and cast steels except stainless steels with austenitic structure.	P01, P10, P20, P30, P40, P50
Stainless steel **M**	Stainless austenitic and austenitic/ferritic steel and cast steel.	M01, M10, M20, M30, M40
Cast iron **K**	Grey cast iron, cast iron with spheroidal graphite, malleable cast iron.	K01, K10, K20, K30, K40
Non-ferrous metals **N**	Aluminium and other nonferrous metals.	N01, N10, N20, N30
Superalloys and titanium **S**	Heat resistant special alloys based on iron, nickel and cobalt, titanium and titanium alloys.	S01, S10, S20, S30
Hard materials **H**	Hardened stel and cast iron materials, chilled cast iron.	H01, H10, H20, H30

CP30
Wear resistant CVD-coated grade intended for grooving in a variety of workpiece materials. Provides good wear resistance and cutting speed capability in steel and cast iron.

CP500
Tough versatile PVD-coated micrograin grade intended for grooving in a variety of workpiece materials. Universal choice.

Ordering specification for custom made K-inserts



Ordering specification for custom made K-inserts

Internal grooving:

When considering operation NR and NL illustrated below (holder CNR and CNL), always state the diameter of the hole as well as the axial position of the groove = LH. In the case of small hole diameters, however, use holder SNR and SNL with insert 9NR and 9NL respectively.

Axial grooving:

With operation type EAR and EAL (holder CEAR and CEAL) the outer dimension of the groove (INPLM) must be stated.

Set-up machining recommendations

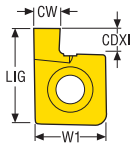
Set-up

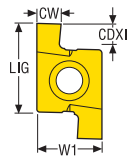
– The mounting should be stable.
– The tool should be securely clamped and the overhang should be as small as possible.
– The centre height should never deviate by more than ±0,1 mm from the workpiece centre.

Internal grooving

– Decisive factors for ensuring vibration-free machining are the relationship between the toolholder overhang and its diameter, and the width of the grooving insert.
– In unfavourable circumstances, the cutting speed and feed rate should be reduced below the recommended values

Grooving of radius grooves and grooves with trapezoidal cross-section





In this type of grooving, different forms of chip problems often occur. The feed rate should therefore be reduced to obtain thin chips and avoid chip build-up and insert fracture.

Formulae for cutting data calculation are found in page(s) 103.

Special inserts for precision grooves

– Ground to specification using the insert blanks shown.
– Blanks available for grade CP30 and CP500.
– Please contact your local representative for price and delivery.

Cutting speed, v_c (m/min)

In this section a recommended cutting speed is indicated under specified conditions.
Use the tables beginning on page(s) 1030 to classify the workpiece material into a SMG
The cutting data tables provide a start value for feed rate (f) and cutting speed (v_c) for the selected cutting width (CW).
The cutting data tables are based on grooving with full cutting width.
The recommended cutting speeds in the tables are calculated for 15 minutes tool life with use of external flood coolant.
In order to increase the accuracy towards the actual cutting conditions and requirements of the applications the recommendation is to use My Pages – Suggest on www.secotools.com

v_c = cutting speed (m/min)

CW = cutting width (mm)

f = feed rate (mm/rev)

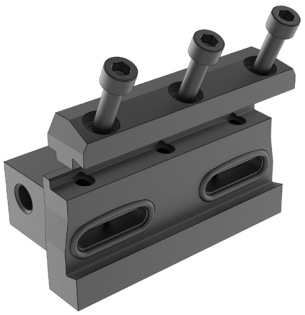
Parting-off

Optimized for parting-off applications, the Seco 150.10 consists of a high-speed steel blade that holds the insert and a holder that retains the blade. This setup provides maximum stability, while the heat resistance of the high-speed steel ensures the insert will be securely retained especially when the blade is hot.

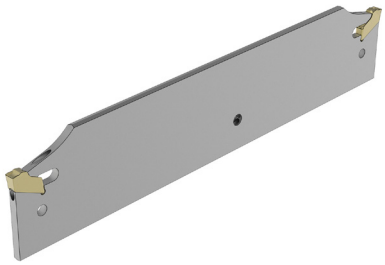


- Inserts in neutral version N are first choice.
- R/L-inserts have a setting angle of 6° in order to eliminate burrs.
- Three different chipbreakers, -12, -14 and -16 depending on workpiece material.

Parting-off

System Designation | Shank width | Jetstream Tooling® integrated coolant inlet

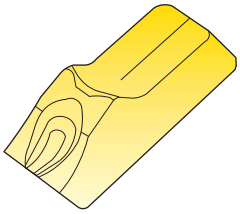
150.10 - 20 20 - 20 JETI



Shank height | Blade height

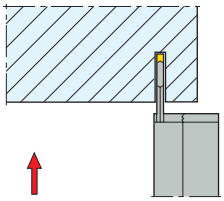
System Designation | Insert size | Jetstream Tooling® Duo integrated coolant inlet

150.10A - 20 - 4 R JETI



Blade height | R = Right, L = Left

System Designation | Neutral version



150.10 - 4 N - 14

Insert size | Chipbreaker

For more information on Jetstream Tooling® and accessories, see page(s) 38, 85-89, 1026

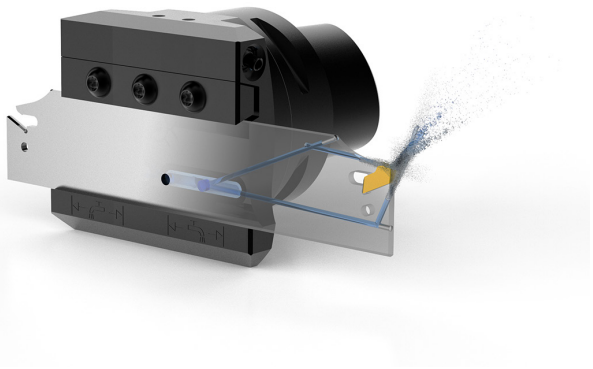
Parting-off, up to ∅160 mm

General

Use the highest blade possible (size 25) for maximum stability.

Use the shortest overhang possible for maximum stability and low risk of vibrations.

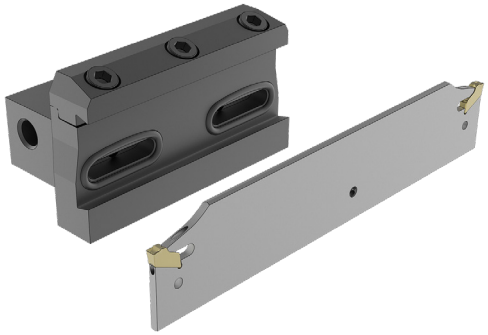
Make sure that the tool is at 90° to the centre-line of the component to ensure part quality and good tool life.



Ideally, parting-off is run with a sub-spindle or part-catcher. In this case the cutting edge will be protected by having the second spindle or a fixture picking up the workpiece.

Parting-off without sub-spindle requires the feed rate to be reduced as the tool approaches centre (by up to 75% about 2 mm before the component centre – depending on workpiece diameter). May also be applied on tubes to reduce burr.

A well-aimed and sufficient flow of coolant, ideally through the blades 150.10JETI, will give long tool life and good surface finish.

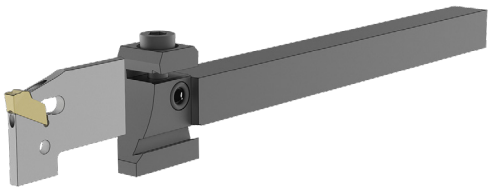


Smaller inserts reduce the material waste and thus reduce material cost. On the other hand wider inserts allow higher feed rates, which increases productivity. The optimum depends on the customer

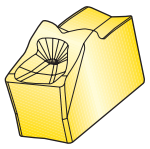
Seco Jetstream Tooling® Duo holders, yet another innovation introduced to market, feature both a rake face and flank face jet, that may provide even better chip control and significantly longer tool life.

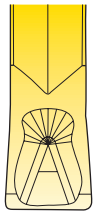
Toolholders

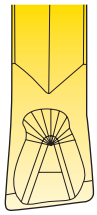
The Seco 150.10A parting-off system consists of a high speed steel blade which holds the insert and a holder which retains the blade. This provides maximum stability, while the hot strength of the high speed steel ensures that the insert will be securely retained even when the blade is hot.

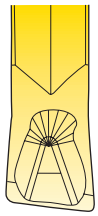


Type 150.10..-20/25JETI basic holder



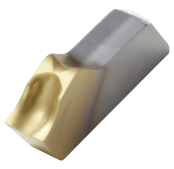






Intended for long, reversible high speed steel blades with a depth of cut of up to 160 mm diameter. The same holder is suitable for both right-hand and left-hand versions. JETI functionality with integrated coolant delivery straight to the cutting edge.

Type 150.10..-15JETI blade holder



Intended for short high speed steel blades for cutting depths up to 38 mm diameter. The high speed steel blade ensures excellent stability and, due to the compact design, is suitable for machines with limited space, such as automatic lathes. JETI functionality with integrated coolant delivery straight to the cutting edge.

Inserts

Inserts N-/ R- /L-		
Inserts in neutral version N are first choice since they normally achieve increased tool life, better chip control, high surface quality and allow higher cutting data compared to the handed (R-/L-) version. The R-/L-inserts have a setting angle of 6° in order to eliminate burrs and minimize the parting-off pip left on the workpiece. To reduce pip size with N-inserts, use the smallest width possible. The correct centre height is another major factor to avoid pips (control to ±0,1 mm). When using R-/L-inserts, the feed rate should be reduced by approximately 30%. Convex or concave surfaces will be avoided, when using right or left hand inserts, by reducing the feed rate.		
N	**R**	**L**
		

Chipbreakers

Chipbreakers		
First choice for steel at low feed rates. 24° positive cutting rake angle. Excellent chipbreaking.	First choice for stainless steel. First choice for steel at medium-high feed rates. 15° positive cutting rake angle with sharp edge.	First choice for steel and cast iron in difficult conditions and/or high feed rates. 20° positive cutting rake angle. Strong protection chamfer.

Grades

TGP35
Wear-resistant **Duratomic**® CVD-coated grade intended for parting-off of steel and cast iron at high cutting speeds.

TGP45
Wear-resistant **Duratomic**® CVD-coated grade intended for parting-off of steel and stainless steel at moderate to high cutting speeds.

T25M
Tough versatile CVD-coated grade intended for parting-off of steel, stainless steel and cast iron at moderate cutting speeds.

T350M
Tough versatile CVD-coated grade intended for parting-off in a variety of workpiece materials at moderate cutting speeds.

TGS2050
Hard and wear-resistant PVD-coated micrograin grade intended for parting-off of superalloys. First choice for ISO-S materials and CoCr-alloys.

CP500
Tough, versatile PVD-coated micrograin grade intended for parting-off of steel, stainless steel, superalloys and titanium at low to moderate cutting speeds. First choice in stainless steel. Provides more wear resistance compared to CP600

CP600
Very tough PVD-coated fine-grain grade intended for parting-off of steel, stainless steel, superalloys and titanium at low cutting speeds. Well-suited in interrupted cuts. Universal choice.

HX
Uncoated wear-resistant hard grade intended for parting-off of hardened steels, superalloys, titanium alloys and non-ferrous materials.

Appllication recommendations

Easy conditions: pre-machined surface, shallow grooves etc.

Difficult conditions: raw surface, deep grooves etc.

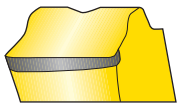
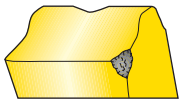
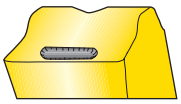
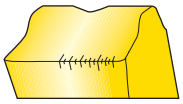
Parting-off – Grades Secolor

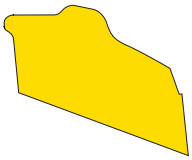
The chart belows shows application areas for grades available in the Parting-off system 150.10.
The black areas in the chart indicate a grade's main ISO application groups and the white areas indicate other supplementary application groups.

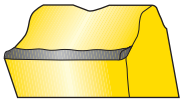


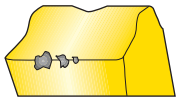


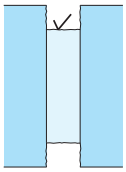






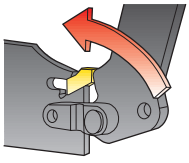




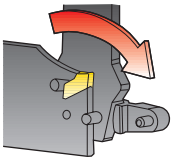


Indicative ISO classification of the grades

Steel **P**	All kinds of steel and cast steels except stainless steels with austenitic structure.	P01, P10, P20, P30, P40, P50
Stainless steel **M**	Stainless austenitic and austenitic/ferritic steel and cast steel.	M01, M10, M20, M30, M40
Cast iron **K**	Grey cast iron, cast iron with spheroidal graphite, malleable cast iron.	K01, K10, K20, K30, K40
Non-ferrous metals **N**	Aluminium and other nonferrous metals.	N01, N10, N20, N30
Superalloys and titanium **S**	Heat resistant special alloys based on iron, nickel and cobalt, titanium and titanium alloys.	S01, S10, S20, S30
Hard materials **H**	Hardened stel and cast iron materials, chilled cast iron.	H01, H10, H20, H30



Troubleshooting



Troubleshooting

Flank wear 	Reduce the cutting speed. Select a more wear resistant grade.	Insert fracture 	Reduce the feed rate. Select a tougher grade. Select a stronger chipbreaker.
Crater wear 	Use a coolant. Select a more wear resistant grade. Reduce the cutting speed. Reduce the feed rate.	Comb cracks 	Reduce the cutting speed. Reduce the feed rate. Ensure that the coolant flow is adequate and constant. If not, shut off the coolant.
Plastic deformation 	Use a coolant. Select a more wear resistant grade. Reduce the cutting speed. Reduce the feed rate.	Built-up edge 	Increase the cutting speed. Increase the feed rate. Do not use coolant.
Edge chipping 	Select a tougher grade. Check the workpiece mounting. Check the cutting speed.	Poor finish 	Reduce the feed rate. Increase the cutting speed. Use a coolant. Improve the stability. Check the alignment of the tool.

Change of insert

Inserts are changed with the aid of key 150.10A-150.

Cutting speed, v_c (m/min)

In this section a recommended cutting speed is indicated under specified conditions.
Use the tables beginning on page(s) 1030 to classify the workpiece material into a SMG.
The cutting data tables provide a recommendation of chipbreaker and a start value for feed rate (f) and cutting speed (v_c) for selected cutting width (CW).
The recommended cutting speeds in the tables are calculated for 15 minutes tool life with use of external flood coolant.
In order to increase the accuracy towards the actual cutting conditions and requirements of the applications the recommendation is to use
My Pages – Suggest on www.secotools.com

v_c = cutting speed (m/min)

CW = cutting width (mm)

f = feed rate (mm/rev)

X4

The Seco X4 system with a 4-cutting-edge insert is optimized for parting-off and grooving primarily small parts. It consists of indexable tangential inserts and a highly stable clamp design. These strong, dependable system components achieve high accuracy, repeatability, productivity and surface quality in external grooving and parting-off operations involving small parts and slim bars and tubes made from a wide variety of work materials.

- Inserts with four cutting edges.
- Easy double access clamping system.
- Good repeatability (±0,025 mm / *0.001 inch*).
- Jetstream Tooling® Duo – improves chip control and tool life of cutting edge.

X4 – General information

The Seco X4 system (multi edge solution) comprises toolholders and inserts for external radial machining.

The system can be used for:

– Grooving

– Parting off

Seco X4 comes in combination with the unique Jetstream Tooling® Duo. A high pressure cooling system which provides directed coolant supply to the cutting edge by two streams: the first to the rake surface and the second to the clearance surface.

The X4 system provides several features:

– Four cutting edges

– Ability to pass free along a shoulder down to the centre

– Easy double access clamping system

– Easy indexing without total extraction of the screw

– Integrity safe in case of edge failure. The inserts can still be used with three broken passive edges

– Good repeatability (±0,025 mm / *0.001 inch*)

– Jetstream Tooling® Duo – improves chip control and tool life of cutting edge

Set-up machining recommendations

The mounting should be stable.

The tool should be securely clamped and the overhang should be as small as possible.

The centre height should never deviate by more than ±0,1 mm / *±0.0039 inch* from the workpiece centre.

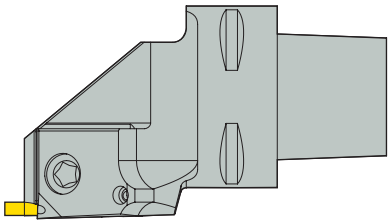
Parting-off

An insert with a neutral edge (N) normally results in a longer useful life of the insert.

The useful life of the insert can be increased by reducing the feed rate or stopping the feed entirely before break-through.

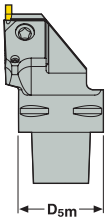
Formulae for cutting data calculation can be found in page(s) 103.

Seco Jetstream Tooling® Duo



Seco Jetstream Tooling® Duo holders, yet another innovation introduced to market, feature both a rake face and flank face jet, that may provide even better chip control and signif cantly longer tool life. For more information on Jetstream Tooling® and accessories, please see page(s) 85-89, 1026.

Troubleshooting



Troubleshooting for X4 inserts, see page(s) 938.

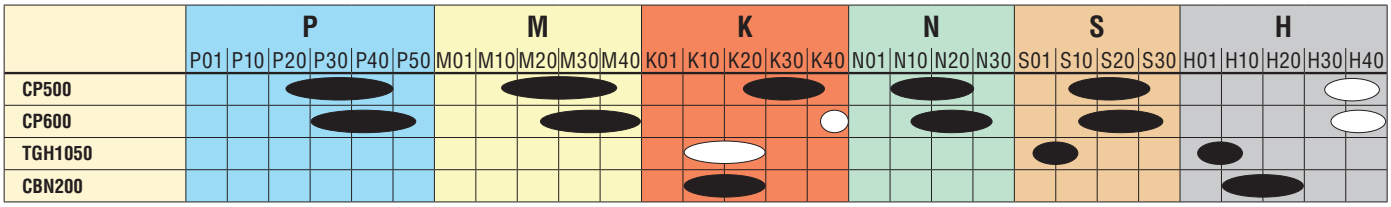
X4 grades, coated		
CP500		Tough PVD-coated micrograin grade intended for grooving, profiling and parting-off at moderate cutting speeds. Provides more wear resistance compared to CP600. (Ti,Al)N + TiN
CP600		Very tough PVD-coated fine-grain grade, universal choice intended for grooving and parting-off at low to moderate cutting speeds. Well-suited in stainless steel and in interrupted cuts. Tougher alternative to CP500. (Ti,Al)N + TiN
TGH1050		Very hard supermicrograin grade intended for partly hardened steel components as well as generally workpiece materials such as superalloys and cast-iron and due to remarkable edge toughness it also provides high performance in interrupted cuts and hard-surface removal. Ti-Al-Si-N nanolaminate coating



X4 grades, PCBN		
CBN200		Inserts with brazed tips, intended for hardened steels and pearlitic cast iron. Composition: 90% cBN content grade with an average grain size of 3-6 µm and a Al ceramic binder. Coating: No coating.

Indicative ISO classification of the grades

Steel **P**	All kinds of steel and cast steels except stainless steels with austenitic structure.	P01, P10, P20, P30, P40, P50
Stainless steel **M**	Stainless austenitic and austenitic/ferritic steel and cast steel.	M01, M10, M20, M30, M40
Cast iron **K**	Grey cast iron, cast iron with spheroidal graphite, malleable cast iron.	K01, K10, K20, K30, K40
Non-ferrous metals **N**	Aluminium and other nonferrous metals.	N01, N10, N20, N30
Superalloys and titanium **S**	Heat resistant special alloys based on iron, nickel and cobalt, titanium and titanium alloys.	S01, S10, S20, S30
Hard materials **H**	Hardened stel and cast iron materials, chilled cast iron.	H01, H10, H20, H30

The application area for each grade is shown in the chart below.

The black areas in the chart indicate a grade's main ISO application groups and the white areas indicate other supplementary application groups.

Cutting data

Cutting speed v_c (m/min)

In this section a recommended cutting speed is indicated under specified conditions.

Use the tables beginning on page(s) 1030 to classify the workpiece material into a SMG.

The cutting data tables provide a recommendation of chipbreaker and a start value for feed rate (f) and cutting speed (v_c).

The cutting data tables are based on grooving with full cutting width (CW).

The recommended cutting speeds in the tables are calculated for 15 minutes tool life with use of external flood coolant.

In order to increase the accuracy towards the actual cutting conditions and requirements of the applications the recommendation is to use My Pages – Suggest on www.secotools.com

v_c = cutting speed (m/min / *sf/min*)

CW = cutting width (mm / *inch*)

f = feed rate (mm/rev / *in/rev*)

Grade CP500

SMG		CW = 0,5-1,0 *CW = 0.020-0.039*		CW = 1,5-2,0 *CW = 0.059-0.079*		CW = 2,5-3,0 *CW = 0.098-0.118*

Adapters

Seco offers a comprehensive product range of stationary adapters that can be used in horizontal or vertical lathes, machining centers and sliding-head and multi-tasking machines. These products can be used in spindles, turrets, sub-spindles and half-turrets.

- Shank tools adapters offer a very popular connection for square-shank turning toolholders.
- Boring bars adapters offer several flexible tool sizes in a wide diameter range for rough and fine boring.

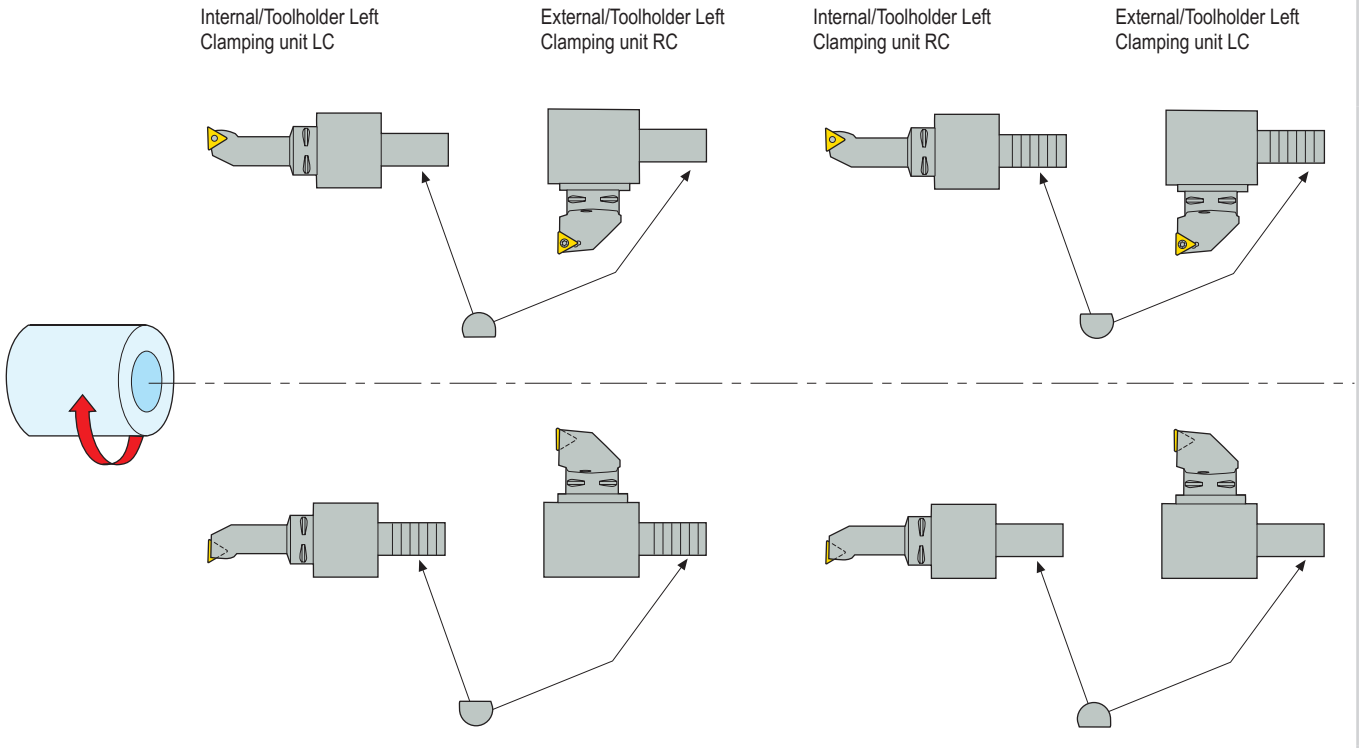
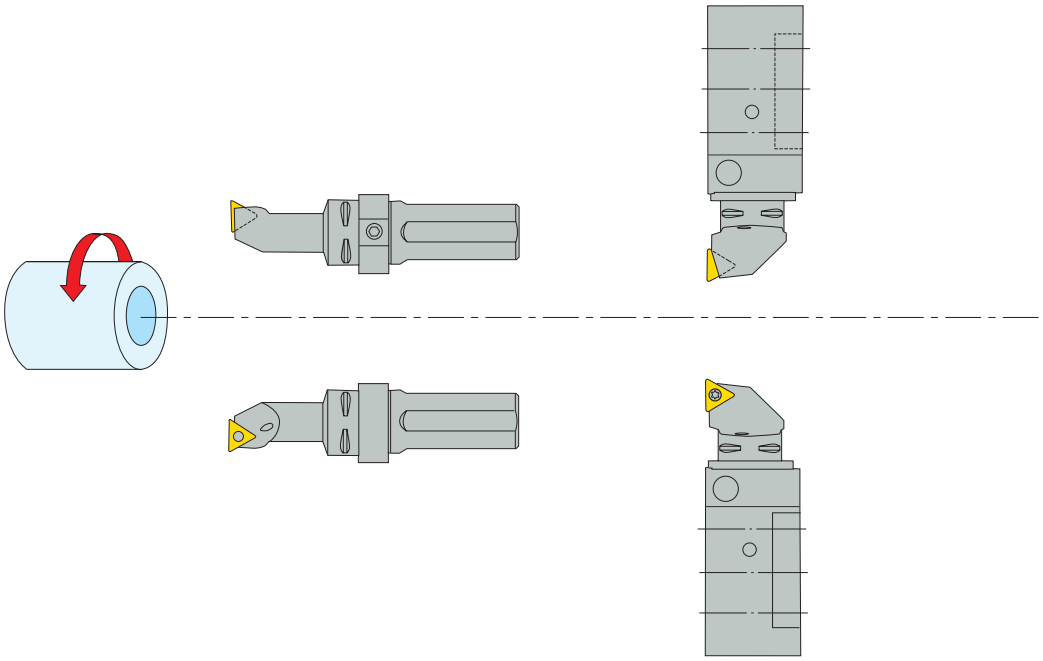
Seco-Capto™ clamping units

Seco-Capto™ clamping units provide a flexible and modular system, whereby the same adapters can be used across different machines and tool assemblies can be built with extensions. The Seco-Capto systems offers high torque transmission, rigidity and accuracy with a strong, self-centering joint within 2 µm. Seco-Capto back ends are available on rotating tools, as well as stationary tools for turning, boring, threading and grooving applications.



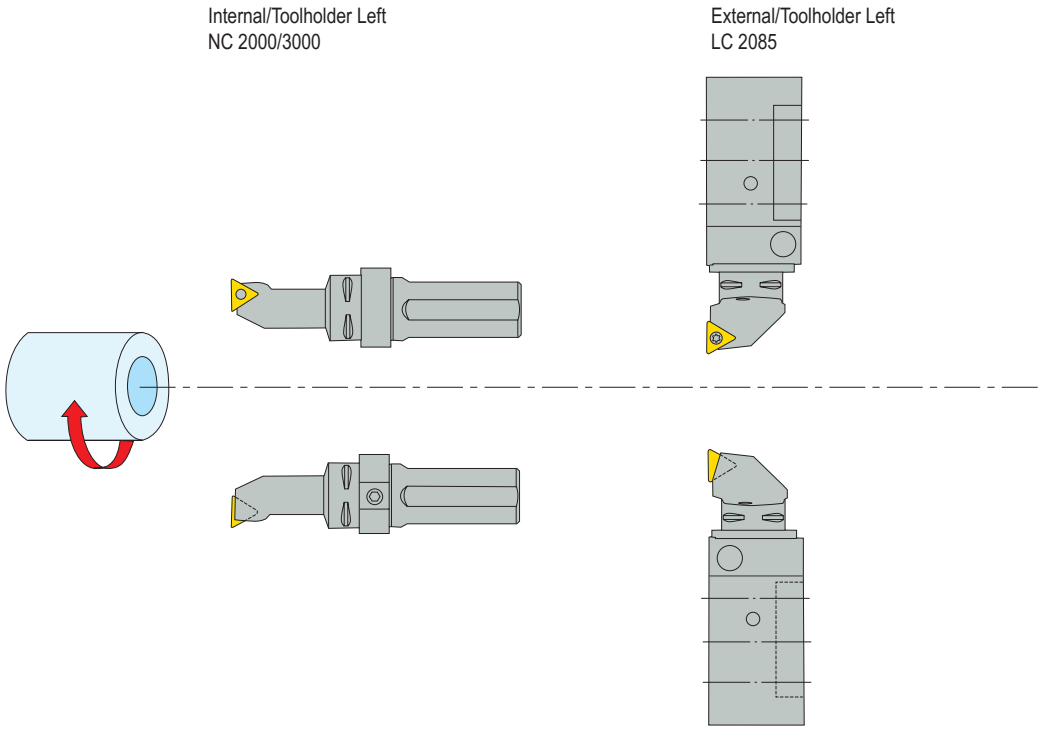
- Type 2085 with straight-shank-type machine-side connection
- Type 2000/3000 with cylindrical machine-side connection.
- VDI Clamping units
- Type 2090 clamping units adapters provide a specific mounting system.

Selection of VDI clamping unit



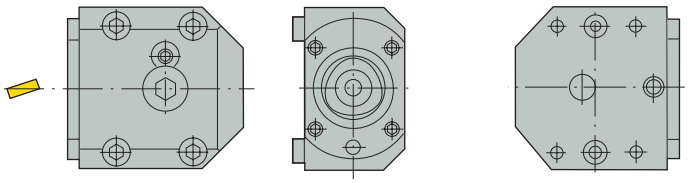
Note: The polygon socket has to be rotated 180°

Selection of VDI clamping unit

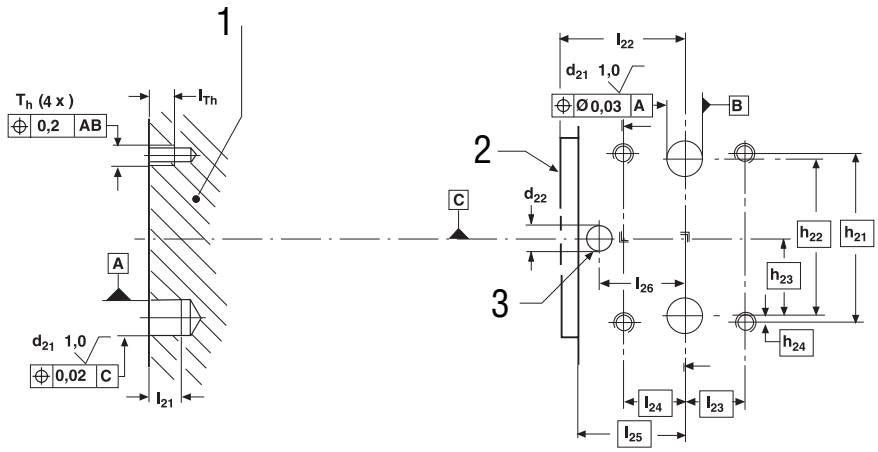


Note: The polygon socket has to be rotated 180°

Selection of clamping unit 2000/3000/2085



Selection of VDI clamping unit



2000 = cylindrical type with drawbar, 3000 = cylindrical type with screw, 2085 = shank type.

Clamping unit 2090 for special applications

Design instruction for application of clamping unit RC/LC 2090

1. Material hardness = 270 HB min
2. Front of clamping unit
3. Coolant outlet

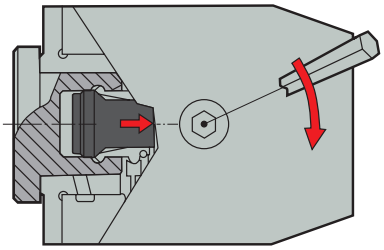
Toolholders

A large range of Seco-Capto™ toolholders is available:

– For external and internal turning with negative inserts.

– For external and internal turning with positive inserts.

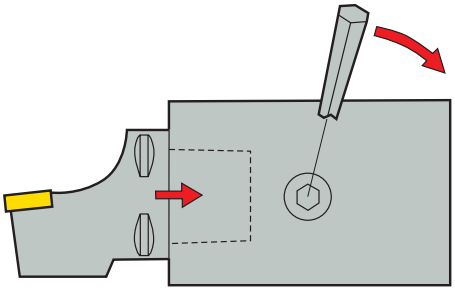


– For external and internal turning with MDT inserts.

– For external and internal threading.

For selection of toolholder use the guidelines for conventional tools.

Cover plug



A cover plug should always be used to protect the ground surfaces of the connecting sleeve from dirt or damage to the clamping units when they do not have a cutting unit inserted.

Clamping force

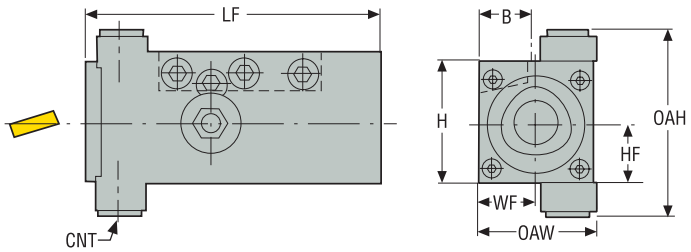
In order to obtain the necessary clamping force (F) the clamping unit should be tightened to the torque value (Mv) as recommended in the table below.

Torque Mv	
Size	Nm
C3	35
C4	50
C5	70
C6	90
C8	130

Turning the cutting tool 180°

If the entire clamping unit has to be rotated 180°, the polygon socket should be rotated 180°.

1. Loosen the screws (2).
2. Dismantle the polygon socket. Use the special tool as described on page(s) 1027 (ordered separately).
3. Move the guiding pin to the opposite side of the clamping unit.
4. Rotate the polygon socket 180° and reassemble. Tap carefully with a plastic mallet.



Lubrication

All manual clamping units are lubricated with BP Energrease ACS-2 prior to delivery (Alternative MOBIL Temp Shc 32 or STATOIL Beacon 325). The lubrication should be checked every six months. New grease can be applied via the cam.

1. Remove the screw (1).
2. Assemble grease nipple 5692 012-01.
3. Pump in grease with grease gun until it begins to seep out around the key handle at the cam.
4. Remove grease nipple.
5. Replace screw (1) into the cam.

Note: Clamping unit must be clamped during lubrication.

For the Seco range of torque keys, please see next page

Torque key range

The range of torque keys with fi xed torque values are available, in combinations key grip/torque value for insert locking, for most of the Seco turning products. By using a torque key you always ensure the correct tightening force when mounting the insert. The torque value is given on page(s) 1028 for each screw. Torque keys are calibrated according to ISO 6789.

Code key: T00-15P35

T00 = Torque screwdriver type for Torx Plus blade
T00T = Torque T-handle type for Torx Plus blade
H00 = Torque screwdriver for hexagonal blade
H00T = Torque T-handle type for hexagonal blade
15P = Torx Plus size
35 = Torque value 3,5 Nm

SMG – Introduction

Cutting speed v_c (m/min)

The foundation for SMG is a classification of workpiece materials based on their type rather than their relative machinability and consequently it contains workpiece materials like composites. It is comprehensive enough, but still easy to identify which SMG a particular material belongs.

Each SMG has a specific material standard in a specific condition assigned as reference to allow easy adjustment of cutting data for any actual material compared to any Seco reference material see page(s) 104.

As example the reference materials EN C45E for SMG P4 and EN 42 CrMo 4 for both SMG P5 and SMG H5 see further details in the following tables.

Steels, ferritic and martensitic stainless steels

SMG	Description	Properties	Reference	$k_{c1.1}$	m_c
P1	Free-cutting steels	360 < R_m < 880	11 SMn30 R_m = 385 N/mm^2	1500	0,14
P2	Low-alloy ferritic steels, C < 0.25%wt Low-alloy weldable general structural steels	320 < R_m < 600	S235JRG2 R_m = 420 N/mm^2	1600	0,23
P3	Ferritic & ferritic/pearlitic steels, C < 0.25%wt Weldable general structural steels Case-hardening steels	430 < R_m < 610	16 MnCr 5 R_m = 550 N/mm^2	1800	0,14
P4	Low-alloy general structural steels, 0.25% < C < 0.67%wt Low-alloy Quench & Temper steels	520 < R_m < 1200	C 45E R_m = 660 N/mm^2	2000	0,15
P5	Structural steels, 0.25% < C < 0.67%wt Quench & Temper steels	550 < R_m < 1200	42 CrMo 4 R_m = 700 N/mm^2	2020	0,18
P6	Low-alloy through-hardening steels, C > 0.67%wt Low-alloy spring and bearing steels	520 < R_m < 1200	C 100S R_m = 600 N/mm^2	2100	0,17
P7	Through-hardening steels, C > 0.67%wt Spring and bearing steels	600 < R_m < 1200	100 Cr 6 R_m = 650 N/mm^2	2160	0,17
P8	Tool steels High Speed Steels (HSS)	600 < R_m < 1200	X 40 CrMoV 5 1 R_m = 700 N/mm^2	2400	0,20
P11	Ferritic & martensitic stainless steels	415 < R_m < 1200	X 20 Cr 13 R_m = 675 N/mm^2	2000	0,15
P12	Maraging and precipitation-hardening stainless steels	500 < R_m < 1200	X 5 CrNiCuNb 16 4 R_m = 1100 N/mm^2	2100	0,17

Free-cutting, austenitic and duplex stainless steels

SMG	Description	Properties	Reference	$k_{c1.1}$	m_c
M1	Free-cutting austenitic stainless steels		X 10 CrNiS 18 9	1700	0,14
M2	Low-alloy austenitic stainless steels		X 5 CrNi 18 10	1920	0,18
M3	Medium-alloy austenitic stainless steels		X 2 CrNiMo 18 14 3	2070	0,17
M4	High-alloy austenitic and duplex stainless steels		X 2 CrNiMoN 22 5 3	2230	0,16
M5	Difficult high-alloy austenitic and duplex stainless steels		X 2 CrNiMoN 25 7 4	2510	0,13

Cast irons

SMG	Description	Properties	Reference	$k_{c1.1}$	m_c
K1	Grey cast irons (GCI)		EN-GJL-250	930	0,32
K2	Compacted graphite irons (CGI)		EN-GJV-400	1000	0,35
K3	Malleable cast irons (MCI)		EN-GJMB-550-4	1050	0,37
K4	Nodular cast irons (SGI)		EN-GJS-500-7	1160	0,37
K5	Austempered ductile irons (ADI)		EN-GJS-1000-5		
K6	Austenitic lamellar cast irons		EN-GJLA-XNiCuCr15-6-2		
K7	Austenitic nodular cast irons		EN-GJSA-XNiMn23-4		

Non-ferrous metals

SMG	Description	Properties	Reference	$k_{c1.1}$	m_c
N1	Aluminium alloys, Si < 9%		AW-7075		
N2	Aluminium alloys, 9% < Si < 16%		AC-44200 Si = 12%		
N3	Aluminium alloys, Si >16%		AlSi17Cu5		
N11	Copper alloys		CW614N	740	0,26

Superalloys and titanium

SMG	Description	Properties	Reference	$k_{c1.1}$	m_c
S1	Iron-based superalloys		Discalloy		
S2	Cobalt-based superalloys		Stellite 21		
S3	Nickel-based superalloys		Inconel 718	2530	0,21
S11	Titanium, low alloyed, (α)		Ti		
S12	Titanium, medium alloyed, (α+β)		TiAl6V4	1500	0,24
S13	Titanium, high alloyed, (near β and β)		Ti10V2Fe3Al		

Hard materials

SMG	Description	Properties	Reference	$k_{c1.1}$	m_c
H3	Case-hardened steels	58 < HRC < 62	16 MnCr 5 60 HRC	2070	0,14
H5	Quenched & Tempered steels	38 < HRC < 56	42 CrMo 4 50 HRC	2320	0,18
H7	Quenched & Tempered steels Bearing steels	56 < HRC < 64	100 Cr 6 60 HRC	2480	0,17
H8	Tool steels High Speed Steels (HSS)	38 < HRC < 64	X 40 CrMoV 5 1 50 HRC	2750	0,20
H11	Martensitic stainless steels	38 < HRC < 50	X 20 Cr 13 45 HRC	2300	0,15
H12	Maraged and precipitation-hardened stainless steels	1200 < R_m < 1650	X 5 CrNiCuNb 16 4 R_m = 1450 N/mm^2	2410	0,17
H21	Manganese steels	23 < HRC < 64	X 120 Mn 12 50 HRC		
H31	White cast irons	50 < HRC < 64	EN-GJN-HV600(XCr11) 55 HRC		

Other difficult materials

SMG	Description	Properties	Reference	$k_{c1.1}$	m_c
PM1	Low-alloy PM-materials		F-0008 Fe-0.7C		
PM2	Medium-alloy PM-materials		FLC-4608 Fe2Cu1.8Ni 0.5Mo0.2Mn0.8C		
PM3	High-alloy PM-materials Exhaust valve seat materials, etc.				
HF1	Hardfacing alloys Welded or plasma-deposited iron-based alloys				
HF2	Hardfacing alloys Welded or plasma-deposited cobalt- and nickel-based alloys				
CC1	Sintered tungsten carbide		G50		

Plastics and Composites

SMG	Description	Properties	Reference	$k_{c1.1}$	m_c
TS1	Thermosetting polymers		Urea formaldehyde (UF)		
TS2	Thermosetting carbon-fibre composites		T300 T700 T800 HTA-S IMA - Epoxy (M21)...		
TS3	Thermosetting glass-fibre composites		Epoxy - HX..(42..)/E glass (7781...)...		
TS4	Thermosetting aramide-fibre composites		Kevlar 49		
TP1	Thermoplastic polymers		Polycarbonate (PC)		
TP2	Thermoplastic carbon-fibre composites		PPS/PEEK - T300..		
TP3	Thermoplastic glass-fibre composites		PPS/PEEK - E-glass or A-glass...		
TP4	Thermoplastic aramide-fibre composites				

Graphite

SMG	Description	Properties	Reference	$k_{c1.1}$	m_c
GR1	Graphite		R 8500

Cemented carbide inserts and insert carriers

Cemented carbide inserts and cemented carbide insert carriers from Seco Tools are not included in the product range intended for the following requirements.
Nevertheless Seco Tools can make the following declaration.
These products meet all requirements in RoHS (Restriction of the use of certain Hazardous Substances in electrical and electronic equipment), WEEE (Waste Electrical & Electronic Equipment) and ELV (End of Life Vehicles) requirements.
Products do not contain mercury, lead, hexavalent chromium, cadmium, CFC, HCFC, flame retardants or solvents in concentrations that exceed specifications in the regulations.

Regrinding:
Wet or dry grinding can produce potentially hazardous dusts or mists that can irritate skin, eyes, nose, throat and result in lung damage or disease. To avoid injury use proper safety precautions and protective equipment.

Disposal:
Seco Tools will buy back used inserts and solid carbide tools for recycling. Inserts and solid carbide tools should be separated from other metal waste (steel, aluminium, copper etc).
All packing material is fully recyclable.

CBN and PCD inserts

Inserts from Seco Tools are not included in the product range intended for the following requirements. Nevertheless Seco Tools can make the following declaration.
This product meets all requirements in RoHS (Restriction of the use of certain Hazardous Substances in electrical and electronic equipment), WEEE (Waste Electrical & Electronic Equipment) and ELV (End of Life Vehicles) requirements.
Products do not contain mercury, lead, hexavalent chromium, cadmium, CFC, HCFC, flame retardants or solvents in concentrations that exceed specifications in the regulations.

Regrinding:
Wet or dry grinding can produce potentially hazardous dusts or mists that can irritate skin, eyes, nose, throat and result in lung damage or disease. To avoid injury use proper safety precautions and protective equipment.

Disposal:
Seco Tools will buy back used CBN- or PCD-tipped inserts for recycling. Inserts should be separated from other metal waste (steel, aluminium, copper etc). Solid CBN-inserts may be discarded as landfill waste.
All packing material is fully recyclable.

Black oxide insert carriers

Insert carriers from Seco Tools are not included in the product range intended for the following requirements. Nevertheless Seco Tools can make the following declaration.
This product meets all requirements in RoHS (Restriction of the use of certain Hazardous Substances in electrical and electronic equipment), WEEE (Waste Electrical & Electronic Equipment) and ELV (End of Life Vehicles) requirements.
Products do not contain mercury, lead, hexavalent chromium, cadmium, CFC, HCFC, flame retardants or solvents in concentrations that exceed specifications in the regulations.

Disposal:
Used insert carriers may be sent for recycling together with ordinary steel waste (swarf and discarded steel scrap) for recycling.
All packing material is fully recyclable.

Cermet inserts

Inserts from Seco Tools are not included in the product range intended for the following requirements. Nevertheless Seco Tools can make the following declaration.
This product meets all requirements in RoHS (Restriction of the use of certain Hazardous Substances in electrical and electronic equipment), WEEE (Waste Electrical & Electronic Equipment) and ELV (End of Life Vehicles) requirements.
Cermet grade C15M inserts do contain nickel and will leach nickel when in contact with the skin. Amount of leaching is higher than specified in norm SS-EN 1811 Reference test method for release of nickel from products intended to come into direct and prolonged contact with the skin. These norms are intended for products that are in direct and prolonged contact with the skin and are therefore not directly applicable for cermet inserts. Persons with known allergic reactions to nickel are advised to wear protective gloves when handling cermet inserts.

Regrinding:
Wet or dry grinding can produce potentially hazardous dusts or mists that can irritate skin, eyes, nose, throat and result in lung damage or disease. To avoid injury use proper safety precautions and protective equipment.

Disposal:
Used inserts may be recycled. Inserts should be separated from other metal waste (steel, aluminium, copper, etc) including cemented carbide inserts.
All packing material is fully recyclable.

Nickel coated insert carriers

Insert carriers from Seco Tools are not included in the product range intended for the following requirements. Nevertheless Seco Tools can make the following declaration.
This product meets all requirements in RoHS (Restriction of the use of certain Hazardous Substances in electrical and electronic equipment), WEEE (Waste Electrical & Electronic Equipment) and ELV (End of Life Vehicles) requirements.
Products do not contain mercury, lead, hexavalent chromium, cadmium, CFC, HCFC, flame retardants or solvents in concentrations that exceed specifications in the regulations.
Insert carriers do contain nickel and will leach nickel when in contact with the skin. Amount of leaching is not higher then norm SS-EN 1811 Reference test method for release of nickel from products intended to come into direct and prolonged contact with the skin.
These norms are intended for products that are in direct and prolonged contact with the skin and are therefore not directly applicable for insert carriers.
Persons with known allergic reactions to nickel are advised to wear protective gloves when handling nickel coated insert carriers.

Disposal:
Used tools maybe sent for recycling together with ordinary steel waste (swarf and discarded steel scrap) for recycling.
All packing material is fully recyclable.

This work is published with the understanding that Seco Tools and its editors are supplying information aimed to present a general orientation and direction of metal cutting and related sciences. If professional services are required for specific applications, the assistance of an appropriate professional should be acquired. The information is provided "as is"; Seco Tools and its editors disclaim all representations and warranties, express or implied, of any kind, including, without limitations, any warranties of merchantability, fitness for a particular purpose, title, or non-infringement. In no event will Seco Tools or its editors be liable to any party for any direct, indirect, special or other consequential damages for any use of the information, even if Seco Tools or its editors are advised of the possibility of such damage. The information provided herein is for reference purposes only. Actual prices, specifications, and product descriptions are finalized at the time of sale and may vary by location. The information provided herein is subject to change without prior notice.
