Seco

Catalog & technical guide 2024.1

Tooling Systems

Seco

At Seco, we make tools, tech, and solutions for the most advanced manufacturing challenges on Earth. From our founding in Fagersta Sweden, to today's global company, our business has always been made to measure, and built on trust.

Combining cutting-edge, precision tools with lasting, personal partnerships, we're a true people company helping our partners discover the future of the manufacturing industry.

We're proud to make for makers, invent for inventors, and partner with pioneers. Driving the future forward with our focus on innovation. In short - if the right tool for the job exists, we'll deliver it. If it doesn't, we'll create it.

We're proud to put sustainability at the heart of everything we do, challenging perceptions of our industry, changing the process of manufacturing, and playing our own small part in shaping a brighter looking future.

Made for Makers

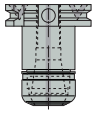
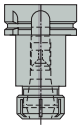
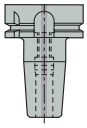
Welcome to Seco Tools Tooling Systems

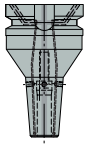
STTS (Seco Tools Tooling Systems), formerly EPB, was created in 1924 in Bouxwiller located in the eastern part of France, near the German border.

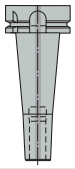
STTS is the competence center for CNC Tooling systems, responsible for the development and the manufacturing of rotating tool holders, Boring heads, and Antivibration solutions within the Seco Tools Group.

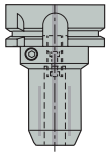


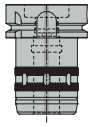


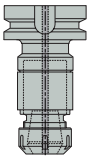


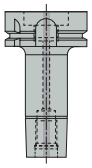






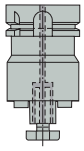


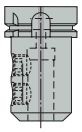


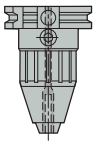


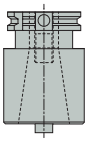
With modern production means from latest's generation, and a high degree of automation, STTS is producing a range of Premium solutions with the utmost quality and performance, with an environmental focus.

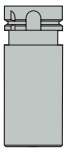
STTS offers a comprehensive range of rotating tool holders including:

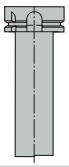


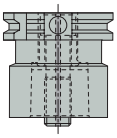


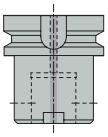






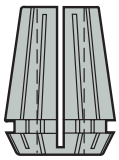


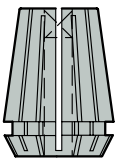


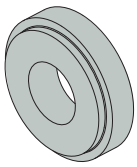


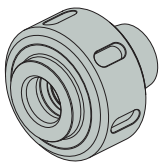
– High precision collet chucks, and standard ER collet chucks
– A large range of Shrinkfit holders, standard DIN, reinforced and slim designs
– Hydraulic expansion chucks
– Power Milling chucks
– Synchronized tapping chucks
– Basic holders for the Seco screw-in system Combimaster, also in Steadyline antivibration style
– Different type of face mill holders for tenon driven cutters and disc mill cutters, also in Steadyline antivibration version
– Endmill holders with coolant channels through the face
– NC drill chucks
– Blanks
– Easyshrink EVO Heating device
– Operating accessories like pullstuds, collets, ToolBoy…

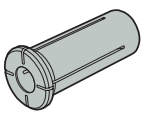
coming in all kind of classical taper back ends.











Tool holders – Machine side vs Workpiece side

Our value proposition

Precise machine tools and advanced cutting tools together provide outstanding metal cutting productivity. However, the link between the cutting tool and machine spindle – the tool holder – is crucial in fully achieving that productivity.

Each application has different requirements for a tool holding system. No holder can cover all the different applications. Seco Tools offer a wide variety of holding methods featuring a repeatable accuracy, high holding power and an adapted design to provide you an affordable way to fully utilize your cutting materials and machine capability to profitable advantages.

Your main expectations

– Less scraps and rework costs
– Finished product first-pass quality yield
– Maximize machine capabilities and spindle utilization
– Control costs / part
– Time reduction
– Achieve tight tolerances in complex workpiece shapes
– Fast and easy tool preparation

Our value proposition		Your benefits
1	• Secured tool gripping	• Increased rigidity for superior cutting results including high speed applications • Combine with SECO advanced cutting materials for considerable gains in productivity
2	• Optimal designs • Fine balanced in standard or pre-balanced by Design • Made from Premium steels • Through coolant delivery • Pre-drilled holes for RFID tags	• Designed for optimal rigidity and ensure workpiece accessibility • Faster speeds and feeds, without vibrations, delivering better surface finishes • Longer service life
3	• High quality tool holders with exceptional and repeatable concentricity	• Even chip load on the cutting tool edges • Extended tool life • Less vibrations excellent surface finishes
4	• Precisely ground taper back ends, tolerance class ≤ AT3 for SA, HSK according to ISO12164, and Seco-Capto™ according to ISO 26623-1-PSC	• Perfect fit in the spindle for higher torque transmissibility • Better tool centering • No premature spindle wear

High precision collet chuck ER HP – 5672

Collet chucks and interchangeable collets are the most common form of round-tool holding technology. Cost-effective ER styles are available in a wide range of sizes and offer sufficient grip for reliable light milling and drilling operations.

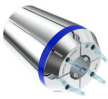
High-Precision ER collet holders feature low runout, a symmetrical design, and are fine balanced for high-speed operations. A perfect combination with Seco drills and solid end mills for best performance!

Most important features			
1	Made from Premium material	5	Combination of a high precision antifriction nut and a high precision collet mounted onto a high precision chuck, resulting in repeatable runout ≤ 3 µm at 3xD
2	Fine balanced in standard at G2,5-25,000 rpm or U ≤1 g. mm* symmetrical design, ideal for high speed applications	6	Quick tool change, large clamping capacity through HP collets
3	Strong body design for highest static rigidity	7	Selection of diverse HP collet designs (blue ring): standard, sealed up to 100 bar, sealed with coolant channels (maxi 100 bar)
4	Stable and strong tool gripping thanks to a trapezoidal thread, double guidance and a perfect seat for the collet inside the tapered hole	8	Different lengths available

* Seco-Capto: at G6,3-20.000 rpm. When using axial stop screw do not exceed 10.000 rpm.

ER Standard collet chucks ISO15488

Our standard range of ER collet chucks ISO15488 feature a unique 10 µm/.0004" (CAT 12µm/.0005") runout at 3xD.



They are equipped with a very accurate nut ensuring perfect clamping and precise tool centering. All ER standard collet chucks are fine balanced to G2,5-25.000 rpm quality (except CAT-V and Seco-Capto, see product pages).

ER collet chucks come also in extended version with a cylindrical shank, tolerance h5. They can be used when a long reach is required to access restricted areas. Maximum run out measures between 15 µm/.0006" to 18 µm/.0007".

High precision collets HP ER – 5672

The HP ER collets, based on the external design ISO15488-B, feature a 2 µm direct runout and are identified with a blue ring. Produced from special steel, with only 12 slots, they are more rigid. All collets are with an anti-rust coating. To ensure a good clamping force and best accuracy it is recommended to clamp on nominal diameter tools with shank tolerance h10 max (sealed design even h8 max.).

Collet size	Not sealed	Sealed (100 bar max)	Sealed with 4 coolant channels (100 bar max)

ER 40	∅ 3 - 26 mm (steps 0,5 mm) *∅ 0.118 - 1.023" (steps 0.020")*	-1 mm *-0.039"*

Sealing rings for ER sealing nuts

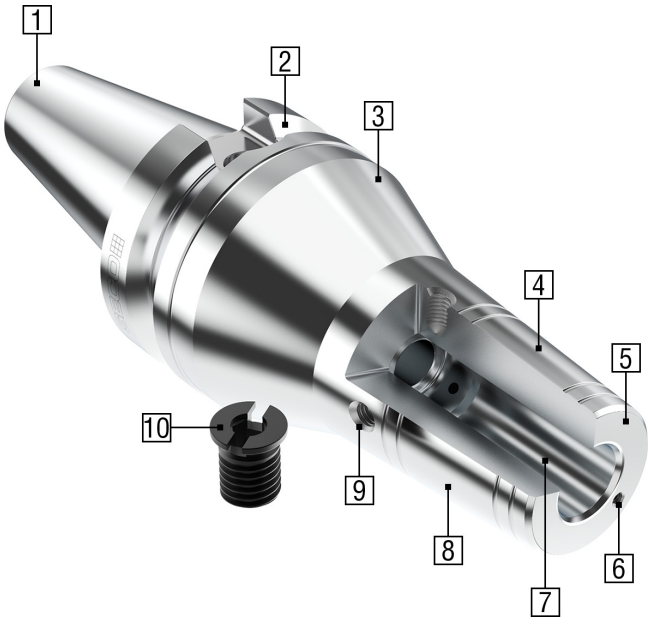
Sealing can be achieved by applying the concave front face of the stop end screw equipping the ER collet chucks onto the tool shank (for tool shanks without groove). The second method, is to use a selection of sealing rings available in most current diameters with a clamping range of nominal to -0,5 mm (-0.020"), to ensure a good flow when using tools with internal coolant. They are mounted on a specific nut. Can be applied up to 100 bar.

Collet size*	Capacity	Clamping range
		
ER 16	∅ 3 - 10 mm (steps 0,5 mm) *∅ 0.118 - 0.394" (steps 0.020")*	-0,5 mm *-0.020"*
ER 20	∅ 3 - 12 mm (steps 0,5 mm) *∅ 0.118 - 0.472" (steps 0.020")*	-0,5 mm *-0.020"*
ER 25	∅ 3 - 16 mm (steps 0,5 mm) *∅ 0.118 - 0.630" (steps 0.020")*	-0,5 mm *-0.020"*
ER 32	∅ 3 - 20 (steps 0,5 mm) *∅ 0.118 to 0.394" (steps 0.020")*	-0,5 mm *-0.020"*

* ER40 and ER50 on request. ER08 and ER11 not available

Collet chuck torque wrench

A collet chuck torque wrench is highly recommended to close the nut of the HP ER collet chucks, in order to achieve a secured and accurate clamping. To release the nut, utilize the classic roller spanner (use of the collet chuck torque wrench to open a nut would cause damages to the key mechanism). The roller spanner are optional for the standard ER collet chucks. Follow strict instructions delivered along with the products.



Collet chuck torque wrench = Torque key + Socket

Classic roller spanner

Heat shrinkfit holders – SFD 5403/5603, SFD 5402, SFR 5600, SFS 5801

Shrinkfit holders are used extensively in complex 5-axis machining because of their ability to maintain excellent runout characteristics over a long tool length ,and because they can be used in tight places. Furthermore, shrinkfit chucks are excellent for transferring high torque,and therefore are well-suited for High Performance Machining (HPM) applications.The balanced design, without mechanical moving parts, make them also the ideal system for high-speed machining.

Most important features			
1	Made from Premium heat resistant material (maxi 400°C acceptable temperature), through hardened 56 HRc +/- 2	6	Peripheral coolant channels as standard on HSK-A63/100 SFD DIN type and SFR Reinforced type. MQL1 according to DIN69090-3 in standard. Others on request.
2	Fine balanced is standard at G2.5-25,000 rpm or ≤1 g.mm*	7	Grips the cutting tool 360° around the shank, leading to high gripping torque
3	Strong body design for highest static rigidity. SFD DIN version acc. to DIN69882-8; Type SFR is a reinforced version.	8	Slim design, available in different lengths preventing collision with workpiece. Use of extensions provide many options to machine deep cavities
4	Sealed system by design, ideal when machining materials generating dust	9	Threaded holes for balancing screws is standard**
5	Repeatable runout ≤ 3 µm	10	Axial stop screw delivered along with the holder (not mounted), featuring a central hole for coolant through

* Seco-Capto: G6,3-20.000 rpm
** Except ∅ 3 to 5 mm (∅ 0.118" to 0.200"), and some SFR- 5600 version, see product pages

Our standard designs

DIN 4.5° version (5403/5603-SFD)

Based on the DIN69882-8 shape, delivered with a stop screw (except diam. 3 and 5 mm), and 4 balancing threaded holes. Comes in diverse lengths.

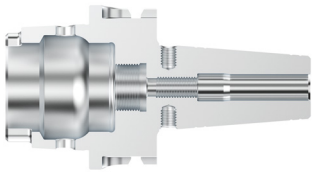
HSK version is “ready” for MQL option. Coolant channels through the face is standard for some HSK types (see product pages), others on request.

Reinforced version (5600-SFR)

The dimensions of the OD is one size wider compared to the DIN 4.5° type and features a conical reinforced outside contour resulting in higher rigidity and a higher transmittable torque. Coolant channels throught the face delivered as standard.(2 channels up to ∅20 mm / ∅0.787”, 3 channels for ∅25 mm / ∅0.984” and ∅32 mm / ∅1.260”). Exists with Safelock tool pull-out protection (see product pages)

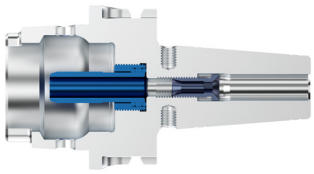
Slim Mold & Die version (5801-SFS)

Long and slim design with a conical 5°/3° nose for easy access to difficult to reach surfaces like in Mold & Die applications. Also available as cylindrical extensions.



MQL for shrinkfit holders HSK-A DIN type (SFDMx/5403)

MQL (Minimum Quanity Lubrication) is a “near-dry” coolant solution, consisting in a mix of air and oil. Seco offers in standard a range of HSK-A shrinkit DIN 4,5° holders (5403/SFD) which can be equiped with specific coolant tubes and stop screws to apply MQL1, i.e. coolant through one channel.



Type SFD 5403M

Shrinkfit holders, according to standard DIN 69090-3, prepared for MQL1. Accessories to be ordered separately.

Type SFD 5403M1

Shrinkfit holders ready for MQL1, delivered with MQL accessories fitted. MQL1 Shrinkfit holders, coolant tubes and stop screws according to standard DIN 69090-3.

Accessories for MQL Shrinkfit holders

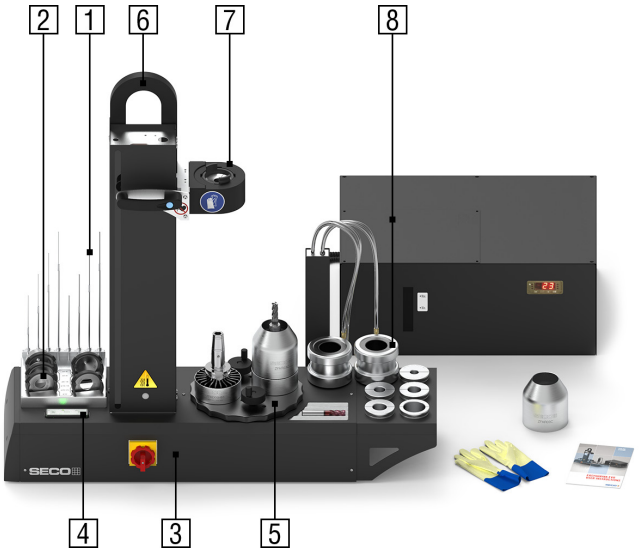
MQL 1: coolant tubes

– HSK-A63, MQL1 Shrinkfit holders need a conventional coolant tube 20E9304, as available for DIN type Shrinkfit holders.

– HSK-A100, MQL1 Shrinkfit holders need a specific coolant tube 20E9306M1: the internal diameters are optimized for MQL flow.

MQL1: Stop screws

Stop screws for MQL1 feature a tapered face, for efficient contact with tapered MQL tool shanks, according to standard DIN 69090-3.



Easyshrink EVO

The easyshrink EVO offers fast, ergonomic shrinking and unshrinking for steel, high speed steel (HSS), heavy metal or carbide tools, reducing tool-change downtime. Featuring a heating unit with optimized automatic heating programs, the Easyshrink EVO uses an induction heating element to prevent overheating, minimize energy consumption and keep focused on the clamping area.

Simple, Ergonomic and easy to use.

Easyshrink EVO

Most important features			
1	Different sizes of stop rods to easily adjust the depth of tool	6	Shrink and unshrink tool holders with a maximum length of: – 480 mm (18.898") with HSK-32 finned support – 430 mm (16.929") with SA50 finned support – 490 mm (19.291") with other finned support
2	Set of heat focusing stoppers enabling shrinking of Carbide and HSS tool shanks ∅3 to 32 mm (0.118 to 1.260"). Split version available for large tools	7	Inductor: fast and optimized shrink and unshrink cycles for steel, HSS, heavy metal or carbide tools with Seco Tools holders
3	Small computer allowing a smart web interface through WIFI or ethernet (RJ45) connection – TDM Systems compatible – Special program easily programmable – Global view of the System status	8	Water cooler unit including 2 cooling bells and a water tank (optional, sold separately)
4	Simple control panel with led indicator: – 3 Standards programs for all Seco Tools Holders – 1 programmable mode for other tool holders (specific shape or competitors) – 1 manual mode	9	All new holders (>SN2020.1) are marked with a program code, helping operator to easily select the adapted heating mode of the device, preventing overheating and thus ensuing a long service life
5	Rotary plate with shrink depth setting – Prevents the user to have any contact with hot holders and allow to switch from the heating position to a cooling position – Adjustment for setting the depth of the cutting tool in your holder by moving the stop rod up & down – Standard integrated air fan cooler		

Easyshrink EVO Features

Power	Capacity	Max. tool length	Max. machine interface	Dimensions (WxDxH)	Weight	Cooling time	Connections
16 Kw	∅3-32 mm ∅0.118-1.260"	430 to 490 mm 16.929 to 19.291"	HSK-A125	317x943x820 mm 12.480x37.126x32.283"	50 kg 115 lb	±7 min	The device accepts following voltage : AC 3 x 400V (+/-10%) + PEN/25A/50-60Hz AC 3 x 400V (+/-10%) + N + PE/25A/50-60Hz For other voltages, the usage of transformer ZFM30IN30 is required and need to be bought separately

DELIVERY CONTENT: 5 standard heat focusing stoppers for ∅3 to ∅32, 8 stop rods, 2 cooling bells, 1 pair of gloves, 1 operating instructions

Accessories

Finned support

Provides positioning of the tool holder onto the support module.
Finned supports for each type of machine side taper used on Shrinkfit tool holders.
Available for all types of tool holders

Contact bushing

Contact bushing for each type and size of Shrinkfit tool holder used.
Available for all types of Shrinkfit holders and diameters.
Required to extract heat from the front end of the holder towards the liquid cooling bell.

Spare parts

Stops rods

Set of standard and thin stop rods.

Enables the tool shrinking depth setting and ejection of broken tools.

4 stop rods with 2.5 mm (0.098") front end & 4 stop rods with 5 mm (0.197") front end covering a shrink depth capacity 0 to 240 mm (0 to 9.449") : 0-60 (0 to 2.362") / 60-120 (2.362"-4.724") /120-180 (4.724-7.087") / 180-240 mm (7.087-9.449")

Air cooling cone

Directs the air stream against the front end of the holder for cooling.

Heat focusing stopper

Magnetic insulator that allows the magnetic field to be concentrated on the front part of the tool holder and to achieve optimised heating.

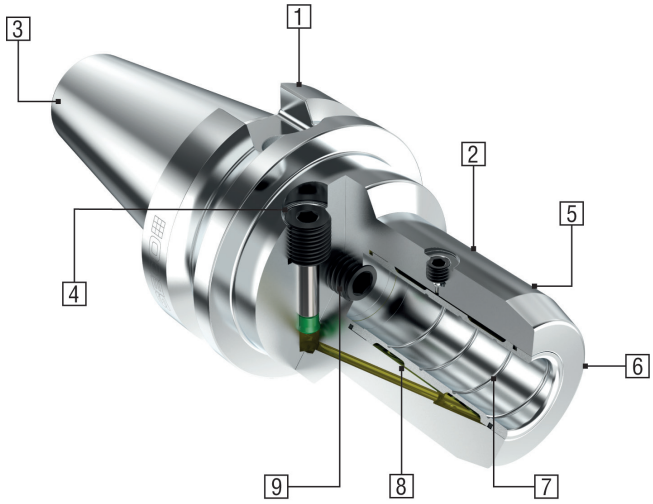
Available for shrinking and unshrinking tool holders ∅3 to ∅32 mm (∅0.118" to ∅1.26").

Split heat focusing stopper

Split magnetic insulator that allows the magnetic field to be concentrated on the front part of the tool holder and to achieve optimised heating of tools with a front end that is larger than shank.

Water cooler Features

Cooling time	Extension table	Dimensions of refrigeration unit (WxDxH)	Weight
±1min	Storage of 5 contact bushings & 1 cooling bell	314x650x285 mm 12.362x25.590x11.220"	35 kg 77 lb



DELIVERY CONTENT: 1 refrigeration unit, tubes support, 2 bells, 1 extension table

Hydraulic expansion chucks – HC (former 5834), HCR and HCS

Hydraulic chucks, that use oil pressure to compress an internal membrane within the holder body, feature repeatable low runout, quick and easy tool change, and are effective for reaming, drilling, threading and light milling with end mills at high spindle speeds. The HCR Power version can perform High Machining Performance thanks to a high radial rigidity, as well as High-Speed Machining.

Most important features	
1	Fine balanced in standard at G2,5-25,000 rpm or ≤1 g.mm (Seco-Capto: G6,3-20.000 rpm)
2	HC version with body shape according to DIN69882-7
3	Made from Premium material, high mechanical strength and good resistance to thermal shocks
4	Very easy to use, just turn one screw until stop. Not additional equipment needed
5	Good gripping forces (shank tolerance h6 maximum), especially Power version offering high clamping forces
6	Repeatable runout ≤ 3 µm HC Straight shanks: runout ≤ 6 µm
7	Helical groove to ensure oil-free or debris-free tool shank surface
8	Oil reservoir acts as a damping agent
9	Axial stop screw for tool length adjustment

Our standard designs

HC Conventional version

The HC conventional hydro-chucks are an easy and efficient solution for high precision works like for drilling, reaming, threading, and light milling in all kind of components. Can be used along with slotted reduction sleeves offering a great flexibility.

Very easy tool changes, reducing set-up times, without need of peripherical equipment's.

HCR Reinforced version

The HCR reinforced version is a universal solution for round tools, dedicated for all kind of machining applications from high performance machining (HPM) to high-speed cutting (HSC)

Its short and compact design offers a high radial rigidity, and high gripping forces (up to 900 Nm for diam 32 !)

Fine balanced, it is suitable for high-speed applications up to 50.000 rpm (diam. 12 and 20 mm).

The range features a direct clamping for diam. 12, 20 and 32, but various other diameters can be clamped through slotted reduction sleeves. All kind of tool shank types can be clamped even in direct mount.

HCS Slim 3° version

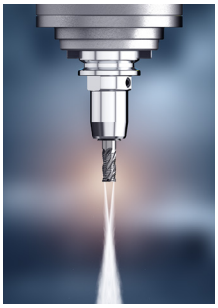
The HCS Slim 3° designs are ideal for excellent workpiece accessibility, machining of narrow and deep areas in light milling and drilling operations.

This range is completed with cylindrical extensions enabling to build long and slim assemblies once mounted into the HCR Power chucks for example.

Reduction sleeves for hydraulic chucks

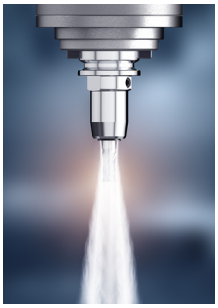
Slotted reduction sleeves from diam. 12, 20 and 32 mm allow the clamping of several different tool shank sizes with just one toolholder, offering a great flexibility and reducing inventory costs.

They are available in two versions:



– coolant-proof for tools with coolant facilities,

– with peripheral coolant channels for tools without internal cooling holes.



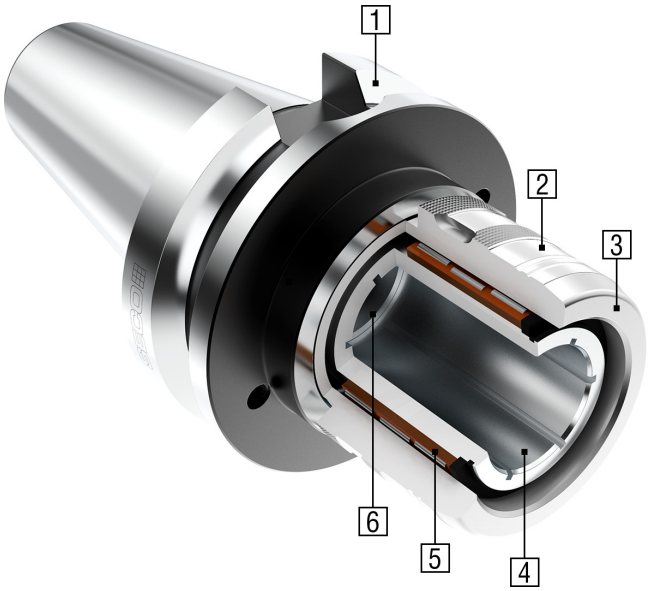
Both versions are equipped with a length pre-adjustement ring.

Runout and transmissible torque will remain unchanged.

All kind of tool shank types can be mounted into the sleeves

Sealed reduction sleeves 05FHC for tools with coolant holes

Reduction sleeves 05FHC…L1 with peripheral coolant channels for tools without coolant holes



Acceptable tool shanks

Power Milling Chucks (PMC)

Mechanical milling chucks provide strong gripping force and high radial rigidity via multiple rows of needle bearings. The design enables heavy milling and quick tool changes as an alternative to shrink fit holders. When using reduction sleeves, a larger clamping capacity can be covered with just one holder, reducing shop's inventory. Optional coolant-stop screws enable Power Milling Chucks to engage through-tool coolant.

Most important features			
1	Pre-balanced by design, maxi 15,000 Rpm for ∅20 mm (0.787") and 10,000 Rpm for ∅32 mm (1.260")	4	High gripping forces enabling torques transmissions up to 640 Nm (472 ft/lbf) minimum for ∅20 mm (∅ 0.787") and 1500 Nm (1106 ft/lbf) minimum for ∅32 mm (∅ 1.260") Shank tolerance maxi h6
2	Strong body shape, high rigidity	5	Needle bearing design for better clamping power
3	Runout: 10 to 15 µm at 3 x D	6	Axial stop screw for tool length adjustment (not for HSK and Seco-Capto). Stop screw for coolant in option

Reduction sleeves for PMC

Reduction sleeves allow a great clamping versatility: with only one chuck and several sleeves you can cover a large range of clamping capacity and reduce your tool inventory.

Care: PMC reduction sleeves are only intended for PMC holders (all other sleeves not compatible).

Through coolant capabilities and accessories

For tools without coolant channels

– Direct chuck clamping: coolant flows through grooves in chucks' bore, along the tool
– Clamping through reduction sleeve: coolant flows through sleeve slots along the tool
– Chucks delivered with stop end screw: to ensure the best coolant flow, rotate the screw backwards or remove it completely.

For tools with coolant channels

For reliable coolant flow, use a "stop screws for through coolant", available as accessories. Select the suitable screw according to chuck size, or reduction sleeve thanks to the chart shown in the product pages.

Acceptable tool shanks

Shank types	Cylindrical DIN1835-1A DIN6535 HA	Weldon DIN1835-1 B DIN6535 HB	Weldon DIN1835-1 B DIN6535 HB	Whistle & Notch

Tapping chucks with micro-compensation, for synchronized tapping TCER5867

Improves tapping performances during synchronized tapping. The built-in axial micro flexure (+/- 0,5 mm) prevents stress on taps, which may appear from micro-deviation of the synchronism between the spindle rotation, feed and tap pitch. That micro-compensation mechanism offers longer tap life, protects taps against breakage, increases productivity and improves thread quality.

Most important features			
1	Internal coolant through, or through sealing discs in specific nuts up to 80 bar /1160 psi	3	Built-in patented axial micro flexure (+/- 0,5mm) preventing from tap stress
2	Using standard ER Collets with square drives, ER11 (M2-M5), ER20 (M4-M12, ER25 (M8-M20), ER40 (M16-M30), ER50 (M20-M48)	4	Strong body shape, Available as straight shanks with Weldon flats, HSK, DIN, BT and Seco-Capto high rigidity

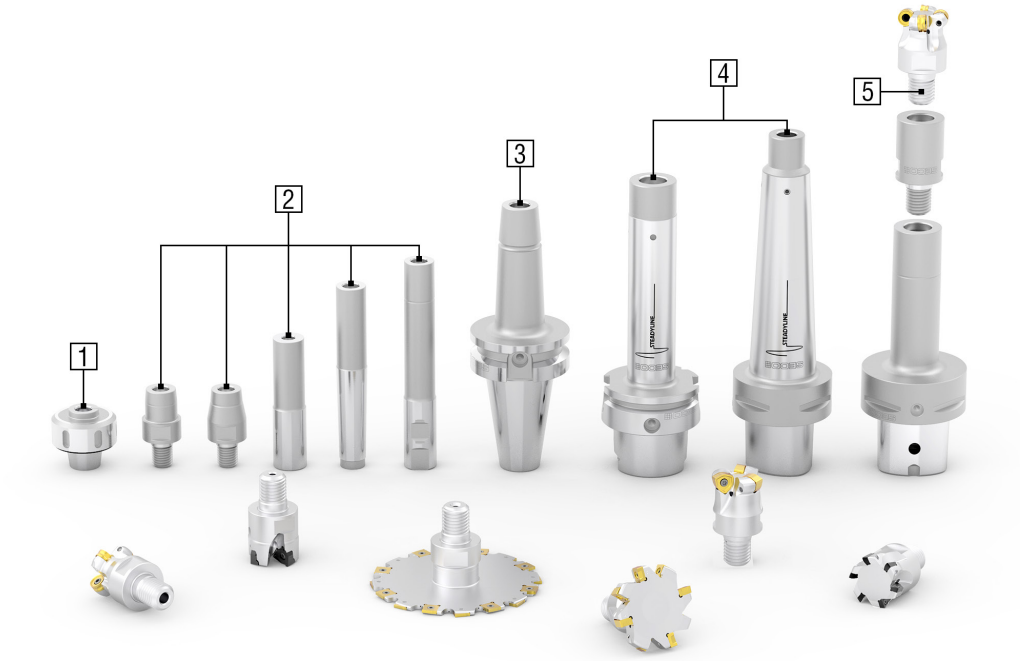
ER Collets with inner square

The specific ER collets feature an internal driving square at the back to fit the tap's square in order to prevent it from rotating in the collet.

Dedicated clamping size on the nominal diameter.

Collet size	Capacity	Clamping range	Collet size*	Capacity with sealing rings	Clamping range
					
ER 11	∅2,5 to 6 mm ∅ 0.098 to 0.236"	0	ER 16	∅ 3 to 10 mm (steps 0,5 mm) ∅ 0.118 to 0.394" (steps 0.020")	-0,5 mm -0.020"
ER 20	∅ 4 to 12 mm ∅ 0.157 to 0.472"	0	ER 20	∅ 3 to 12 mm (steps 0,5 mm) ∅ 0.118 to 0.472" (steps 0.020")	-0,5 mm -0.020"
ER 25	∅ 4 to 16 mm ∅ 0.0157 to 0.629"	0	ER 25	∅ 3 to 16 mm (steps 0,5 mm) ∅ 0.118 to 0.630" (steps 0.020")	-0,5 mm -0.020"
ER 40	∅ 12 to 22 mm ∅ 0.472 to 0.866"	0	ER 32	∅ 3-20 (steps 0,5 mm) ∅ 0.118 to 0.394" (steps 0.020")	-0,5 mm -0.020"
ER 50	∅ 22 to 36 mm ∅ 0.866 to 1.417"	0			

* ER40 and ER50 on request. ER08 and ER11 not availbale
Note: ER50 collet comes without square (included in the chuck)



Combimaster – 5820/5821/K820/K821/BE…

Combimaster is a modular milling cutter system with a wide range of shank types, lengths, and interchangeable cutter heads.

With square shoulder and end mills, copy mills, face mills, plunge mills and disc mills included, the system offers maximum flexibility over a wide range of applications. All Combimaster heads and shanks have coolant holes and many of the cutter heads are available in different pitch versions. The range includes the Steadyline vibration damping holders that automatically counteracts and eliminates tool vibration, and an ER collet system for face, disc and side milling operations.

Most important features

1	ER collet system with ball bearing nut, sizes ER25, ER32 and ER40, ideal to use on Multitask rotating turret	4	Steadyline antivibration version for optimium workpiece access, conical shape for highest rigidity (K820) or straight shape for best accessibility (K821) available in several lengths
2	A variety of extensions and reducers allow to build the optimal suited tool for best workpiece accessibility. Includes cylindrical extensions in steel, heavy metal and carbide allowing applications up to 10xD	5	“Screw-in” connection system in different pitches from M6 to M20. Very rigid and precise. Suitable for HSM
3	Optimized designs to improve stability. Exist in conical shape for highest rigidty (5820) or straight forms (5821) for best accessibility, all fine balanced G6,3-20.000	6	All adapters have coolant through facility

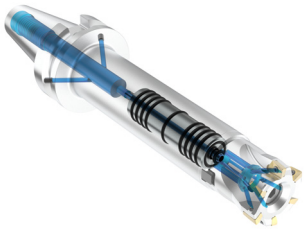
Combimaster to shrinkfit DIN holders

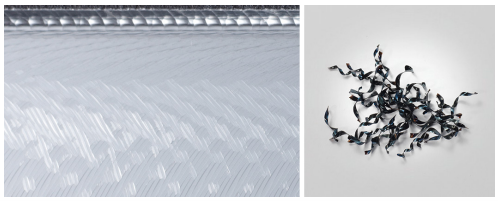
A range of DIN 4,5° shrinkfit adapters with M16 Combimaster connection size allow to use round tools like solid end mills with shanks diameter 6, 8, 10 and 12 mm (∅ 0.236”, 0.315”, 0.394” and 0.472”)

Note: when mounted on Steadyline version fine tuning of assembly is recommended-please request.

Milling cutters holders

Seco Tools offers a broad range of shell mill holders based on spigot and tenon drive features according to ISO 3937 or DIN6357. Providing excellent results in rough to fine milling applications, this portfolio includes options for most machine side connections, as well as most workpiece side diameters.





Type	Features	Designs
Type SM…L1 (5525) Holder for tenon driven milling cutters, enlarged bearing face with coolant channels	• Spigot and tenon drive acc. to ISO 3937, with enlarged (>ISO) bearing face for optimized rigidity • Multiple coolant channels through the spigot's face • Diam. 40 mm (1.575") with 4 threaded holes acc. to DIN6357 • Available in standard in Steadyline antivibration version • In case the cutter has no through coolant, use cross head center bolt with coolant channels, available in option • G6.3-20.000 rpm balancing (except CAT, HSK-A125 and Graflex)	
Type SM…F3L1 (5524) Holder for tenon driven milling cutters and disc mills type B, small bearing face with coolant channels	• Spigot and tenon drive acc. to ISO 3937, small bearing face • Suitable for disc mill cutters type B • Multiple coolant channels through the spigot's face • In case the cutter has no through coolant, use cross head center bolt with coolant channels, option available • G6.3-20.000 rpm balancing (except CAT, HSK-A125 and Graflex)	
Type SMF (569) Holder for tenon driven milling cutters, large bearing face	• Spigot and large tenon drive as well as enlarged bearing face acc. to DIN6357/DIN2079 with 4 screws to secure clamping when heavy roughing applications with high torque transmissions • Coolant through the spigot, one central channel • G6.3-20.000 rpm balancing (except CAT, HSK-A125 and Graflex)	
Type DM (5656/5657) Disc mill holder piston type, for disc mills type A	• The disc mill is held by an adjustable sliding shaft arbor equipped with a driving key. The arbor and disc mill are locked using a pulling screw. • Slim workpiece side clamping flange for optimized accessibility • Prebalanced by design	

Steadyline Milling cutter holders

As the use of long overhang tools becomes increasingly popular throughout the manufacturing industry, Seco offers a patented line of Steadyline® damping tools including shell mill holders and Combimaster holders covering a broad range of milling applications from ∅20 (∅0.787") to over ∅160 mm (∅6.299").

The highly rigid and stable Steadyline® system effectively reduces unwanted vibrations in extreme cutting conditions via a "dynamic passive system" inside the holder body where a damping mass counter vibrates against the first flex vibration.

As such, these products can perform typical long overhang operations twice as fast as traditional tools, reduce spindle stress as well as offer high metal-removal rates, smooth part surface finishes and long tool life.

Inside view of a Steadyline Combimaster screw in system equipped with a R217.96-1640.RE-08-3A Square 6 shoulder and slot milling cutter	Inside view of Steadyline Shell mill holder equipped with a R220.69-0040-10-6A Turbo Mill cutter for challenging face milling applications
	
Machined with Steadyline	**Machined with conventional holder, equivalent dimension**
	

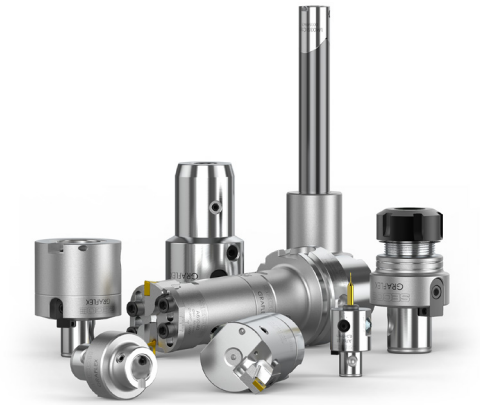
Designs	Steadyline Shell mill holder		Steadyline Combimaster	
– Conical-reinforced shape maximizes the rigidity of the holder, to achieve high static and up to three times greater dynamic rigidity than equivalent solid holders	**SM-KM-L1 ("5556 ") conical-reinforced shape** 	– Spigot sizes from ∅16 to 40 mm (∅0.630 to 1.575") – Enlarged bearing face – Multiple coolant channels through the spigot's face – Available in different projections up to 350 mm (∅13.780")	**M…K (K820) conical reinforced shape** 	– Connection sizes from M12 to M20 – Rigid and accurate Screw-in system, enabling to mount a large panel of replaceable milling heads for all kind of applications – Available in different projections
– When the accessibility to the machining area does not allow conical holders, the **cylindrical shape** provides an excellent compromise between strong rigidity and accessibility. This enables machining over 5xD overhang with cutting speeds similar to short assemblies, increasing depth of cut by up to 3 times compared to classic long holders	**SM-K-L1 ("5555") cylindrical shape** 		**M…K (K821) cylindrical shape** 	

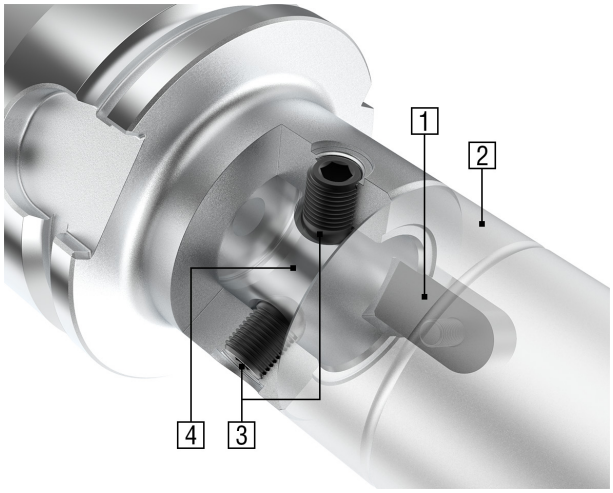
Interested in finding out how to overcome tool overhang challenges?

Then we have an great overview of our Steadyline® products, which include cost-effective milling holders as well as turning and boring bars, perform typical long overhang operations twice as fast as traditional tools. Plus, these highly productive vibration-damping solutions offer high metal-removal rates, smooth part surface finishes and long tool life – all while reducing machine tool stress.

You will find out how the very accurate and rigid GL Connection will enable you to exchange in record times the front heads or just get expertise on how to achieve stable conditions with our solutions.

Visit secotools.com for all the latest information, machining data, manufacturing techniques and other developments on Steadyline® products or access our comprehensive Steadyline® brochure directly thru the QR code.

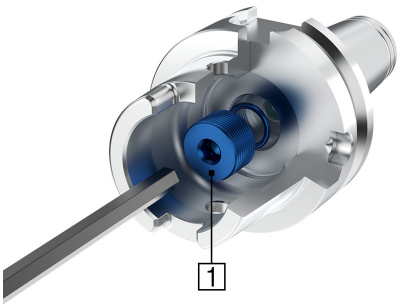




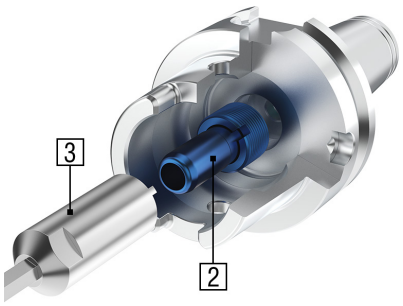
Graflex Modular system

Graflex assemblies include arbors, intermediates, tool holders and boring heads that can be rapidly built together when they are needed.

Suitable for milling, drilling, tapping, reaming and boring, Graflex modules offer tooling of variable lengths and diameters and can be fitted on all types of machines simply by substituting the Graflex basic arbor.



Excellent connection rigidity and precision enables Graflex assemblies to be used in similar machining conditions as the same sized Monobloc holders. The wide range of modules permits tooling dimensions closest to the required machining operation for optimized cutting conditions.



Most important features			
1	The tenon secures the assembly. For operations involving interrupted cuts , the blocking screw on the tenon can be tightened to avoid micro rotational movements	3	Two ball screws, with fine pitched thread , turn radial pressure into axial locking pressure that forces the two faces together. The self-locking features amplifies the interfacial pressure: the harder the cutting forces, the tighter the connection becomes and the higher the rigidity of the assembly Radial access to the ball screw makes it very easy to handle, even directly on the machine
2	Great flexibility: assemblies of variable lengths and diameters can rapidly be built together, when they are needed. Graflex® modules e.g. tool holders and boring heads, as well as cutting tools can be fitted on all types of machines, by the substitution of only the basic Graflex® arbors, available in variety of machine side connections (HSK-A, HSK-E, DIN, BT, CAT, Seco-Capto™ ...). The Graflex® modules are suitable for milling, drilling, tapping, reaming and boring.	4	The long spigot and face connection, combined with tight manufacturing tolerances, offer a strong and very accurate clamping of the assemblies.

WARNING:
Using holders without a coolant tube or a plug fitted, when required by machine tool builder, could cause unseen machine spindle damages.

HSK-A and HSK-E coolant tubes and sealing plugs

1	Sealing plugs are recommended to protect the spindle	**3**	Key need to be ordered separately (see product pages)
2	Coolant tubes are screwed into the backend of the HSK-A and HSK-E holders (HSK-C and F not required) to allow the distribution of the coolant from spindle to tool and protect the spindle and have a +/-1° of angular motion. This degree of freedom is provided to compensate for any misalignment during HSK clamping process		

Pull studs (retention knobs)

The pull stud is the component on which the machine drawbar grabs to pull back the tapered back end of the holder into the spindle.

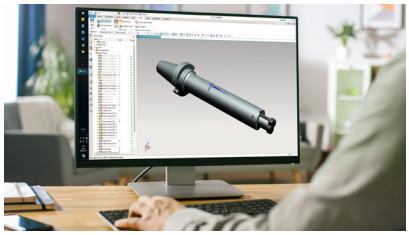
Mainly designed according to international standards (DIN, BT-JIS ANSI, ISO...), it can also exist in different specific designs (on request). It is important to select the appropriate pull stud to avoid damages to the spindle

Assembly supports, Tool Boy

Provides a safe and efficient tool preparation facility. Can be easily fixed on a workbench. The head can be oriented in 4 indexed positions (horizontal and vertical). Different locking systems designs, depending on the holder's tapers designs (see product pages).

Tool boy is composed by a base unit and an interchangeable head but delivered as a complete unit.

Seco Tools Tooling Systems can offer you all kind of special made rotating tool holders, fine and roughing boring bars as well as Steadyline holders for turning, boring and milling.



With our long experience, over 60 years in the industry, we have the expertise to design and manufacture your custom-made tools with the highest quality and best performance guarantees.

A Team of Application Engineers can support you to develop the best adapted solutions for your specific needs. Our design Team will provide you with an approval drawing before manufacturing.

And finally, a dedicated workshop, only for custom-made orders, located in France, will produce your solutions within promised lead times.

We have already supplied a large number of winning solutions in the past to customers active in all main industry segments (Aerospace, Automotive, Power generation, General engineering, ...) which helped them to stay competitive, cost-effective, and deliver in time their finished components.

Please contact your Seco representative.

Balancing qualities

At high spindle speeds (rpm) raises a number of dynamic forces which generate vibrations, shortening tool life, lowers quality of the machined surface, and creates machine wear.

Not all holders are dedicated to run at higher rotations, depending also from the back-end types and sizes, it's why at Seco Tooling Systems, we apply a specific balancing strategy based on the commonly accepted industry standard (ISO1940) which express the balancing quality with G grades.

You will find through the product pages (under column "balancing") and through this guide pages, indications about the balancing quality for each of our holders:

– not balanced at all

– PB: pre-balanced holders by design

– G6.3-20.000 rpm

– G2.5-25.000 rpm or U≤ 1 g.mm for all holders dedicated for High Speed Cutting applications

On request, and if feasible, we can fine balance all holders to G2.5.

Holes for RFID carrier

Product pages contain a column 'RFID hole', mentioning if a hole for RFID carrier is available on the tool holders:

RFID hole = 1: the tool holder feature a hole for RFID carrier, according to respective machine side norms.

RFID carriers can be fitted on request, please enquire.

RFID hole = 0: RFID carrier hole not available. Holes for RFID carriers can be machined and RFID carriers fitted on request, please enquire.

Preliminary notice

The maximum indicated RPM is often restricted by the holder's machine side taper type and size.

Note: To ensure lowest runout, clamp only cylindrical tool shanks DIN 1835-1 Form A/ DIN 6535 Form HA, shank tol. maxi h10, clamped on nominal diameter. Runout can vary when using axial stop screw.

Mounting advice

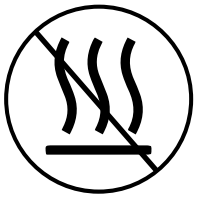
Collet

- Insert collet into the nut aligned with the mark. Push collet by applying pressure (A) until hearing a « click ».
- Fit the tool and screw the nut onto the tool holder.
- To release the collet, unscrew the nut from the tool holder, apply radial pressure (B).
- Never lock the nut without a tool in place.

Sealing ring

- Insert sealing ring into the nut from the back, until it “clicks” into the nut’s front face. The sealing ring’s marked face should be oriented inside the nut to avoid erosion of the diameter information marking.
- Release by pressure onto the sealing ring’s front face

Shrinkfit holders



Clamping ∅	Recommended Max RPM**		
	Type DIN (SFD-/SFD…L1-5603/5403)/5402)*	Type reinforced (SFR-5600)	Type Slim M&D (SFS-5801)

32 mm *1.260”*	30.000	25.000	–

* Tool shanks
– Type: Cylindrical DIN 1835-1 Form A/ DIN 6535 Form HA
– Tolerances: ∅ 3 to 5 mm (∅ 0.118” to 0.197”) maximum h5, tool shank must be carbide or heavy metal (e.g. Densimet). ∅ 6 to 32 mm (∅ 0.236” to 1.260”) maximum h6, tool shank can be steel, HSS, carbide or heavy metal. Using h5 for ∅ 6 to 32 mm (∅ 0.236” to 1.260”) provides a safer minimum clamping torque. Make sure the minimum shrinking depth LSC shown in the Product pages for each holder is followed when fitting the tool shank into the holder.
** For Shrink fit holders equipped with MQL1: maxi 16.000 rpm.
***Heat resistance: maximum acceptable temperature: 400°C

Kit of balancing screws for Shrinkfit holders (all except Slim types)

These kits contain screws of different sizes, to be mounted into the balancing threaded holes of all shrinkfit holders except the slim version. The screws will allow to fine tune the balancing quality of the assemblies holder+tool on a suitable balancing machine. The screws must be inserted until stop in the threaded holes with a torque of 1 Nm (0.736 ft lb).

Hydraulic chucks are not Shrinkfit chucks: don't heat them!

M8	25 Nm *18.44 ft lb*	11 mm *0.433”*
M10	40 Nm *29.50 ft lb*	15 mm *0.590”*
M12	60 Nm *44.25 ft lb*	19 mm *0.748”*
M16	80 Nm *59.00 ft lb*	26 mm *1.023”*
M20	120 Nm *88.51 ft lb*	32 mm *1.260”*

Recommendations of use for Combimaster extensions in Heavy Metal and Carbide:
– Heavy Metal and Carbide extensions are recommended for long overhangs
– Heavy Metal provides a high modulus of rigidity, but is sensitive to bending. Carbide is very rigid but brittle, thus sensitive to shocks. Only to use for finishing operations with small ap and ae
– Use Combimaster cutters with fewer inserts to reduce vibrations
– Select inserts with light geometries, with small edge rounding and preferably with PVD coating
– High feed is a perfect solution in correlation for long applications
– Ensure a very good chips evacuations

Sealing screws and sealing dowels

Tool holders with steep tapers (DIN, BT, CAT) featuring ADB coolant holes, are equipped with two removable sealing screws or sealing dowels mounted into the flange.

Sealing screws Part No 950A0406 for taper size 40 and Part No 950A0606 for taper size 50 (reusable)

- To use the coolant channels through the flange (Form B type), remove the sealing screws / Dowel, and utilize a sealed pull stud
- To use coolant through the center (Form AD type), be sure the plugs are mounted in the flanges, and utilize a pull stud with a drilled coolant channel
- To mount the sealing screws: clean, apply some sealing paste onto the thread (recommended: Loctite 577); screw the sealing screw until its back face is flush with holder's flange; It is recommended to wait 24 hours to reach the maximum sealing resistance (100 bar)

Sealing dowels Part No 564301701 for taper size 40 and Part No 564301702 for taper size 50 (single use only !)

1.1
The holders are delivered from stock with plugged B coolant channels (ready for central coolant form AD) with two plastic dowels

Dismounting:
2.1
To allow coolant through the flange (Form B type), remove the dowel locking screw with a hex key 1,5 mm
2.2
Mount two hexagon socket head screws M3 by screwing it 1,5 to 2 turns into the plastic body 2.3-With pliers, pull out the screw and the plastic body together
2.3
With pliers, pull out the screw and the plastic body together

Mounting:
3.1
Sealing dowels, available as spare parts are for single use only.
3.2
Introduce the two new sealing dowel's plastic bodies, without screw, completely into the two through coolant channels by using an assembly tool, the dowels must not stand out of the flange.
3.3
Tighten the two dowels completely with a size 1,5 mm hex key.

Safety

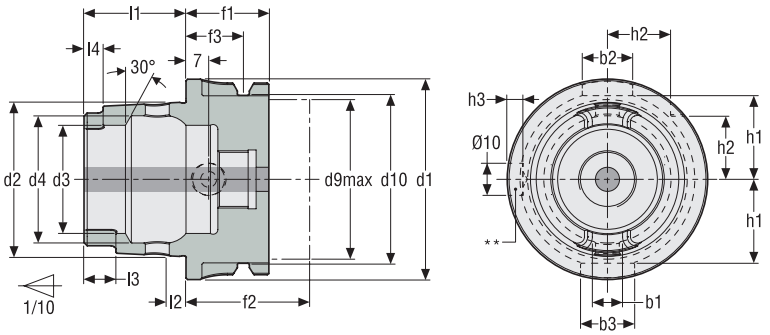
- Always select the best appropriate tool holder type in accordance with your machining application, and tool shank design (see advices in the technical guide)
- Tool must be inserted all the way and securely clamped into or onto the tool holder, using appropriate means (like torque wrenches when clamping torque is recommended). In any case don't over torque, or do not overheat when using a shrink fit heating device.
- Use a Toolboy fixture strongly bolted on a workbench to handle tool assembling/disassembling in safe conditions
- Carefully follow the instructions when delivered along with the products. Special care is requested for the use of the Easyshrink EVO and the Steadyline antivibration holders.
- Use gloves to protect hands and wear protective foot wear. Direct touch of sharp cutting edges may cause injuries
- Handle and carry heavy assemblies with appropriate lifting equipment's
- Make sure to never exceed the maximum cutting conditions recommended for the tool and/or the tool holder
- Do not touch the tool or tool holders when rotating on the machine

Maintenance

- Check on a regular basis the machine spindle's pulling power
- Thoroughly clean all parts (tool holder inner bore and taper, tool shank, spindle,...) before and after use to guarantee best performance.
- Dismount your assemblies periodically to clean and oil them
- Store the holders in a clean and dry place; spray a fine layer of oil to prevent corrosion
- Look for wear on the taper (fretting corrosion) and bores, as well as on the accessories like collets, pull studs,... replace them whenever needed. Make sure the tool shank is undamaged before insertion
- We can offer maintenance/repair services for all our Hydro chucks, please send a request. Never remove the pressurizing screw or the air-release screw

Recycling

- Recycling of our products, when they have come to the end of their useful life, must be done following the local regulations and legislations. Preferably dismantle products to sort out parts of the tool holders according to material type: ferrous materials (steel), nonferrous materials, plastics, others.
- Most of the products are delivered in paper card or plastic boxes which can be recycled accordingly to local regulations and legislations
- Some products are wrapped in anti-corrosion protection papers which can be treated like brown/craft paper according to local regulations and legislations.
- Products which are wrapped in oily plastic bags can be considered as Industrial hazardous waste to be treated according to local regulations and legislations.



HSK-A

Seco allows you to get the most out of both your machine and tools by offering a comprehensive range of tool holders to connect them. **HSK-A** is a lighter weight tool compared to ISO-tapers and offers high consistency in terms of radial and axial accuracy. The range covers all standard workpiece side connections, as well Seco's unique connections.

- Steadyline, vibration damping shell mill holders
- Shell mill holders, with through coolant channels
- Milling cutter holders, flange mounting
- Disc mill holders
- Side lock holders, Weldon
- Shrinkfit holders
- High precision collet chucks
- Hydraulic chucks and Power milling chucks
- ER collet chucks
- Drill chucks and Tapping chucks
- Greenstock blanks and Control bars

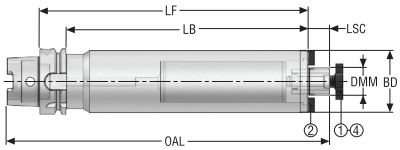
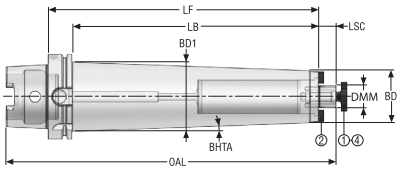
Seco's holders HSK-A have a radial hole through the taper for manual clamping, compatible with HSK-C.

Note: These machine side dimensions are applied to all the holders shown in the Product pages.



** In order to know if a hole for RFID carrier exists, see 'RFID hole' column in Product pages:
1= hole for RFID carrier available, if required a carrier can be fitted on request, please enquire.
0= hole for RFID carrier not available, if required hole can be machined and a carrier can be fitted on request, please enquire.

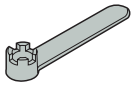
Steadyline®, vibration damping – Metric / *Inch*



HSK-A/ ISO12164-1-HSK-A

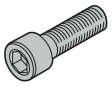
Design 1 (5555)

Design 2 (5556)



- DMM 40 mm / *1.575"*, includes 4 threaded holes for M12 screws on the bearing face ∅66,7 mm / *2.626"* according to DIN 6357
- For HSK sealing plugs, coolant tubes and tube spanners, see page(s) 383
- For ISO attribute explanation, see page 14

Accessories:
4 = Bolt, through coolant



Spare parts:
1 = Bolt
2 = Tenon/Screw

HSK-A/ ISO12164-1-HSK-A

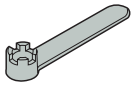
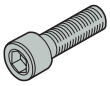
Small face with through coolant channels – ISO 3937 – Metric / *Inch*



Accessories:
4 = Bolt, through coolant

Spare parts:
1 = Bolt
2 = Tenon/Screw



- Small workpiece side diameter BD according to ISO 3937, suitable for Seco disc mill cutters Type B
- For HSK sealing plugs, coolant tubes and tube spanners, see page(s) 383
- For ISO attribute explanation, see page 14

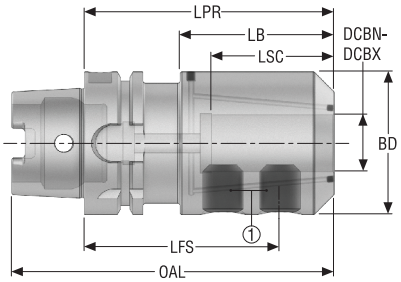
DIN 1835 Form B/ DIN 6535 Form HB – Inch



HSK-A/ ISO12164-1-HSK-A

Design 1

Design 2

- With 2 coolant channels for front lubrication which can be sealed with included screws
- For HSK sealing plugs, coolant tubes and tube spanners, see page(s) 383
- For ISO attribute explanation, see page 14

Spare Parts, included in delivery

For DCBN-DCBX	Locking screw
	
0.500	951CNC043037
0.625	951CNC056050
0.750	951CNC062050
1.000	951CNC075068
1.250	951CNC075068
2.000	951CNC062050

HSK-A/ ISO12164-1-HSK-A

DIN type
– Metric / *Inch*

Spare parts:
1 = Stop screw

- Run-out ≤3 µm
- Delivered with one stop screw
- For Shrinkfit extensions, see page(s) 373-374
- For HSK sealing plugs, coolant tubes and tube spanners, see page(s) 383
- For ISO attribute explanation, see page 14

DIN type – Inch

HSK-A/ ISO12164-1-HSK-A

- Run-out ≤3 µm
- Delivered with one stop screw
- For Shrinkfit extensions, see page(s) 373-374
- For HSK sealing plugs, coolant tubes and tube spanners, see page(s) 383
- For ISO attribute explanation, see page 14

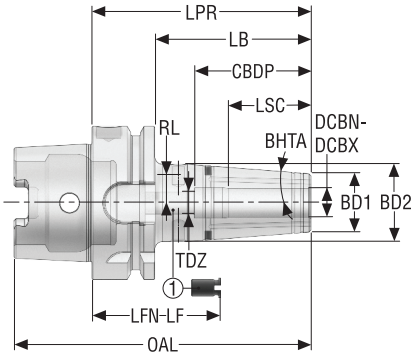
Accessories

For	Balancing screws
	
All	90ZQ01



Spare Parts, included in delivery

For DCBN-DCBX	Stop screw
	
0.250 - 0.625	19BDR05165
0.375	19BDR08165
0.500	19BDR10165
0.625	19BDR12165
0.750 - 1.250	19BDR16165

DIN type, with peripheral coolant channels – Metric / *Inch*

HSK-A/ ISO12164-1-HSK-A

- Run-out ≤3 µm
- With coolant supply channels towards the tool (not plugged)
- Delivered with one stop screw
- For HSK sealing plugs, coolant tubes and tube spanners, see page(s) 383
- For ISO attribute explanation, see page 14

Spare parts:
1 = Stop screw

HSK-A/ ISO12164-1-HSK-A

MQL 1, DIN type – DIN 69090-3 – Metric / *Inch*

- Run-out ≤3 µm
- Designed for MQL1, accessories to be ordered separately
- For MQL1 coolant tubes and stop screws, see page(s) 384-385
- For ISO attribute explanation, see page 14

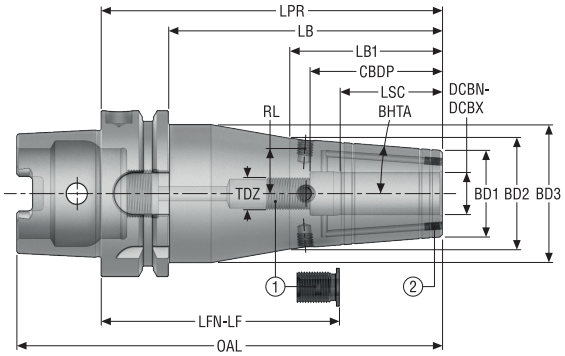
Accessories

For	Balancing screws
	
All	90ZQ01

HSK-A/ ISO12164-1-HSK-A

MQL 1, DIN type – DIN 69090-3 – Metric / *Inch*



- Run-out ≤3 µm
- Delivered ready for MQL1 with stop screw and coolant tube fitted
- For MQL1 coolant tubes and stop screws, see page(s) 384-385
- For ISO attribute explanation, see page 14

HSK-A/ ISO12164-1-HSK-A

Reinforced type
– Metric / *Inch*

Spare parts:
1 = Stop screw
2 = Sealing plugs

- Run-out ≤3 µm
- With coolant supply channels towards the tool (plugged)
- Delivered with one stop screw
- * Holder without thread for a stop screw
- ** Holder without threaded holes for balancing screw
- For HSK sealing plugs, coolant tubes and tube spanners, see page(s) 383
- For ISO attribute explanation, see page 14

HSK-E

Seco allows you to get the most out of both your machine and tools by offering a comprehensive range of tool holders to connect them. **HSK - E** is designed for high spindles speed therefore there is no slots on the flange, it's completely cylindrical.
The range covers all standard workpiece side connections, as well Seco's unique connections.

- Shrinkfit holders
- High precision collet chucks
- ER collet chucks

DIN 69893-HSK-E

DIN

Seco range of rotating holders allow you to get the most out of both your machine and tool by offering a comprehensive array of solutions to connect them. The range covers all standard workpiece side connections, as well as unique connections. Machine side connections are included for most of the norms, including **DIN 69871**.

- Steadyline, vibration damping shell mill holders
- Shell mill holders, with through coolant channels
- Milling cutter holders, flange mounting
- Disc mill holders
- Side lock holders, Weldon
- Shrinkfit holders
- High precision collet chucks
- Hydraulics chucks and Power milling chucks
- ER collet chucks
- Drill chucks and Tapping chucks
- Taper adapters SA
- Greenstock blanks and Control bars

DIN 69871-A/AD/B (ISO 7388-1-A/AD/AF) and CAT-A/AD/B (ISO 7388-1-U/UD/UF)

** DIN40 ADB/CAT 40 and DIN50 ADB/CAT50 with sealing dowel

** DIN40 ADB/CAT 40 and DIN50 ADB/CAT50 with sealing screw

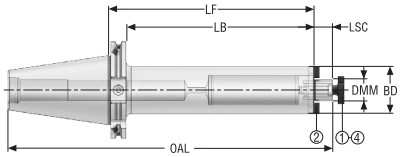
Note: These machine side dimensions are applied to all the holders shown in the Product pages.

* In order to know if a hole for RFID carrier exists, see 'RFID hole' column in Product pages:
1= hole for RFID carrier available, if required a carrier can be fitted on request, please enquire.
0= hole for RFID carrier not available, if required hole can be machined and a carrier can be fitted on request, please enquire.



DIN/ CAT (Combined) indicate these holders of the DIN 69871 range feature the fixed diameter d3 of the ANSI B5 50/CAT norm (full ANSICAT conformity restricted by timing notch inclusion and metric pull-stud thread).

Steadyline®, vibration damping – Metric / *Inch*

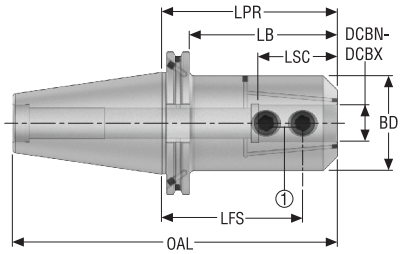
– Metric / *Inch*



DIN 69871-ADB

Design 1

Design 2

- Weldon ∅DCBN-DCBX 20, 25, 32 and 40 mm / *0.787, 0.984, 1.260 and 1.575"* with ground face (Seco-Weldon compatible)
- With 2 coolant channels for front lubrication which can be sealed with included screws
- For ISO attribute explanation, see page 14

Spare parts:
1 = Locking screw
2 = Locking screw, reduced

Reinforced type
– Metric / *Inch*

DIN 69871-ADB

- Run-out ≤3 µm
- With coolant supply channels towards the tool (plugged)
- Delivered with one stop screw
- * Holder without threaded holes for balancing screw
- For ISO attribute explanation, see page 14

Spare parts:
1 = Stop screw
2 = Sealing plugs

BT

Seco range of rotating holders allow you to get the most out of both your machine and tool by offering a comprehensive array of solutions to connect them. The range covers all standard workpiece side connections, as well Seco's unique connections

- Steadyline, vibration damping shell mill holders
- Shell mill holders, with through coolant channels
- Milling cutter holders, flange mounting
- Disc mill holders
- Side lock holders, Weldon
- Shrinkfit holders
- High precision collet chucks
- Hydraulics chucks and Power milling chucks
- ER collet chucks
- Drill chucks and Tapping chucks
- Taper adapters SA
- Greenstock blanks and Control bars

JIS B 6339 with coolant through A/AD/B from DIN (ISO 7388-2-J/JD/JF)

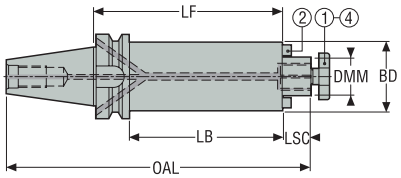
Note: These machine side dimensions are applied to all the holders shown in the Product pages.

The B through coolant design of ADB holders is made according to DIN 69871-B.



* BT holders with a front end diameter in excess of diameter d5, are produced with a flange clearance length: BT30 = ∅ 45 mm x 3 mm; BT40 = ∅ 62 mm x 8 mm; BT50 = ∅ 98 mm x 12 mm. This is compatible with the BT JIS norm which permits free dimensions on workpiece side.

*** In order to know if a hole for RFID carrier exists, see 'RFID hole' column in Product pages:
1= hole for RFID carrier available, if required a carrier can be fitted on request, please enquire.
0= hole for RFID carrier not available, if required hole can be machined and a carrier can be fitted on request, please enquire.

BT TF

Seco range of rotating holders allow you to get the most out of both your machine and tool by offering a comprehensive array of solutions to connect them. The range covers all standard workpiece side connections, as well Seco's unique connections. BT JIS TF brings a better accuracy and is ideal for long tools.

- Steadyline, vibration damping shell mill holders
- Shell mill holders, with through coolant channels
- Side lock holders, Weldon
- Shrinkfit holders
- High precision collet chucks
- Power milling chucks
- ER collet chucks

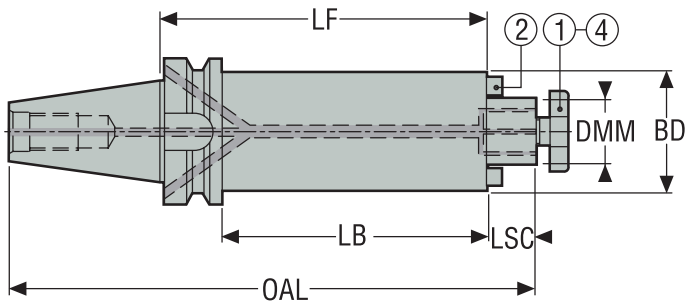
Note: These machine side dimensions are applied to all the holders shown in the Product pages.

* BT with Taper-Face tooling machine sides are:

– conform to the JIS B 6339 (ISO 7388-2) norm.

– except that they have a larger flange towards machine side, with tight tolerances: this achieves taper and face contacts on machine spindles with Taper-Face dimensions. Taper-Face tooling is also usable on standard spindles, but in that case a gap remains between spindle and flange faces.



*** In order to know if a hole for RFID carrier exists, see 'RFID hole' column in Product pages:
1= hole for RFID carrier available, if required a carrier can be fitted on request, please enquire.
0= hole for RFID carrier not available, if required hole can be machined and a carrier can be fitted on request, please enquire.

**** BT holders with a front end diameter in excess of diameter d5, are produced with a flange clearance length: BT30 = ∅ 45 mm x 3 mm;

BT40 = ∅ 62 mm x 8 mm; BT50 = ∅ 98 mm x 12 mm. This is compatible with the BT JIS norm which permits free dimensions on workpiece side.

CAT

Seco range of rotating holders allow you to get the most out of both your machine and tool by offering a comprehensive array of solutions to connect them. The range covers all standard workpiece side connections, as well Seco's unique connections. Machine side connections are included for most of the norms, including **CAT-V**.

- Steadyline, vibration damping shell mill holders
- Shell mill holders, with through coolant channels
- Disc mill holders
- Side lock holders, Weldon
- Shrinkfit holders
- High precision collet chucks
- Hydraulic chucks and Power milling chucks
- ER collet chucks
- Tapping chucks

CAT / ASME B5.50-1994-ADB

Steadyline®, vibration damping – Inch

Reinforced type
– Metric / *Inch*

CAT / ASME B5.50-1994-ADB

- Run-out ≤3 µm
- With coolant supply channels towards the tool (plugged)
- Delivered with one stop screw
- For ISO attribute explanation, see page 14

Spare parts:
1 = Stop screw
2 = Sealing plugs

CAT / ASME B5.50-1994-ADB

Reinforced type – Inch

Spare parts:
1 = Stop screw
2 = Sealing plugs

- Run-out ≤3 µm
- With coolant supply channels towards the tool (plugged)
- Delivered with one stop screw
- For ISO attribute explanation, see page 14

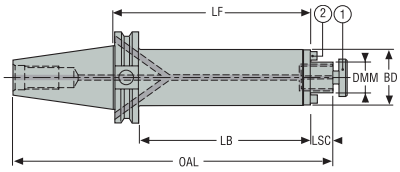
CAT TF

The Seco range of rotating holders allows you to get the most out of both your machine and tool by offering a comprehensive array of solutions to connect them. The range covers all standard workpiece side connections, as well as Seco's unique connections. **CAT-V TF** brings a better accuracy and is ideal for long tools.



- Steadyline, vibration damping shell mill holders
- Shell mill holders, with through coolant channels
- Side lock holders, Weldon
- Shrinkfit holders
- High precision collet chucks
- Power milling chucks
- ER collet chucks

Steadyline®, vibration damping – Inch

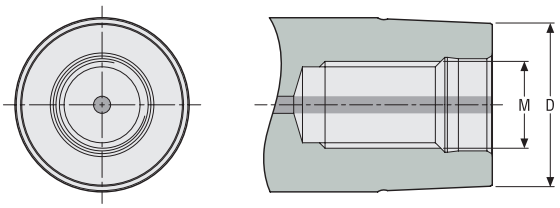
Combimaster

Poorly designed holders can’t provide the rigidity, stability or precision needed for optimized milling strategies and, subsequently, superior performance. Maximize these factors for fully secure milling processes with the expanded line of **Combimaster™** holders.



- Combimaster with different taper backends
- Shrinkfit holders
- Steadyline solutions
- Intermediates to cover extensions and reducers

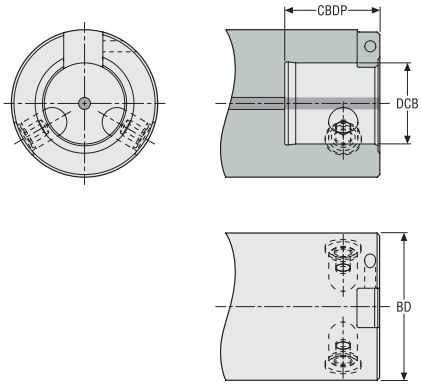
Graflex

Graflex assemblies include arbors, intermediates, tool holders and boring heads that can be rapidly built together when they are needed. Suitable for milling, drilling, tapping, reaming and boring, Graflex modules offer tooling of variable lengths and diameters and can be fitted on all types of machines simply by substituting the Graflex basic arbor.



- Excellent connection rigidity
- Wide range of modules offer high flexibility
- Through coolant possibilities

Graflex®

Seco-Capto™

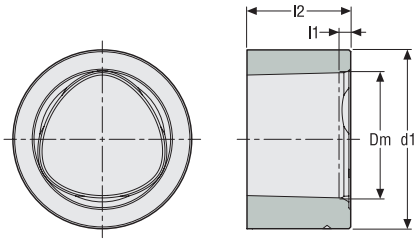
Seco-Capto™ is a leading quick-change modular tooling system for quick setup and replacement of cutting edge holders. The Seco-Capto™ modular tooling range uses Polygonal Shank Coupling (PSC) in accordance with ISO 26623 and features a self-locking taper joint.



- Tool holders range, such as Shrinkfit, collet chuck and shell mill
- Seco-Capto™ basic arbors with HSK, DIN, BT connections
- Seco-Capto™ cassette for greater reliability and insert clamping

ISO 26623-1-PSC/ ISO 26623-2-PSC

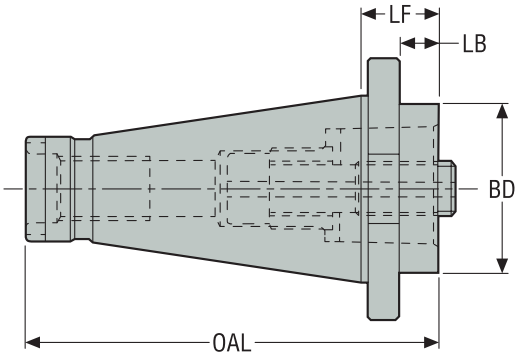
Note: These machine side and workpiece side dimensions are applied to all the holders shown in the Product pages.

* The Seco-Capto™ machine side of short extensions can only be hold by spindles with segment clamping (not with center bolt clamping). The Seco-Capto™ machine side of short reducers can only be hold by spindles with segment clamping (not with center bolt clamping).



** In order to know if a hole for RFID carrier exists, see 'RFID hole' column in Product pages: 1= hole for RFID carrier available, if required a carrier can be fitted on request, please enquire.

0= hole for RFID carrier not available, if required hole can be machined and a carrier can be fitted on request, please enquire.

Reinforced type
– Metric / *Inch*

Seco-Capto™

- Run-out ≤3 µm
- With coolant supply channels towards the tool (plugged)
- Delivered with one stop screw
- For ISO attribute explanation, see page 14

Spare parts:
1 = Stop screw
2 = Sealing plugs

Seco-Capto™

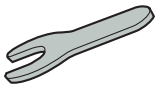
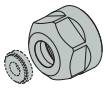
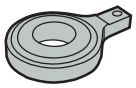
For synchronized tapping, with micro-compensation – Metric / *Inch*

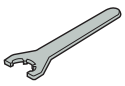
Design 1

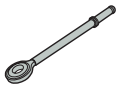
Design 2

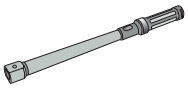












- Maximum coolant pressure 80 bar/ *1160 psi*
- For ER tapping collets with square drive, see page(s) 415, 416-417
- For TCER 5867 sealing rings, see page(s) 418, 419
- For ISO attribute explanation, see page 14

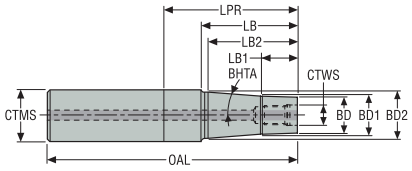
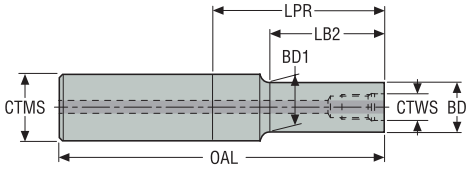
Cylindrical/ Weldon

Seco allows you to get the most out of both your machine and tools by offering a comprehensive range of tool holders to connect them. Besides all common connections Seco also offer Cylidrical and Weldon back ends.

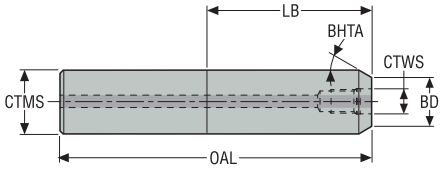


- Cylindrical Tool holders for Combimaster and Graflex solutions
- Cylindrical shrinkfit extensions
- Cylindrical ER extensions
- Weldon Tool holders for Combimaster and Tapping chucks

Steel, Heavy metal or Carbide
– Metric / *Inch*



Cylindrical



Design 1

Design 2

Design 3

- D = heavy metal, E = carbide
- CTMS tolerance h5
- For ISO attribute explanation, see page 14

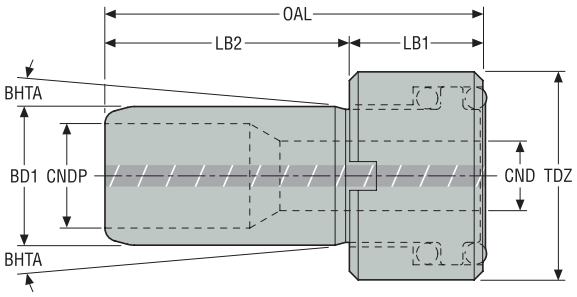
Operating and setting accessories

Seco offers a wide variety of operating accessories to ensure you get the most out of your tooling systems. Seco's range of setting accessories allow you to quickly and correctly set tools to ensure your application benefits from the full accuracy capabilities of your tooling and holder.

- Coolant tubes, Operating accessories, Sealing plugs and Pull studs
- Reduction sleves, Collets for Collet chucks and Sealing rings
- Tool boy for assemly support and Control gauges

– **Metric** / *Inch*



- HSK-A to Seco-Capto holders are delivered with a specific coolant tube available as spare parts and need a specific coolant tube spanner, see product page(s) 312, 313-314, 315
- For ISO attribute explanation, see page 14

Shrinkfit devices

Our range of Shinkfit devices can meet the needs of any manufacturer, offering fast performance and incredibly reliable precision. These systems incorporate automatic heating cycles and efficient cooling cycles that use forced air or water cooling bells. Additionally, the use of stop rods for height setting further ensures stability, reliability and accuracy.

- Easyshrink EVO with latest technology
- Fast and easy operation due to simple interface
- Extended tool holder life because of individual optimized heat settings
- Ergonomic tool setting ensures safety due to the machine design
- Versatility and flexibility with an all-in-one solution

– Metric / *Inch*

Delivery content – 1 Easyshrink Evo device, including:
5 standard heat focusing stoppers for ∅3 to 32 mm
8 stop rods
2 cooling cones
1 pair of gloves
1 operating instruction

- The device accepts only the voltage:
  AC 3 x 400V (+/-10%) + PEN/25A/50-60Hz
  AC 3 x 400V (+/-10%) + N + PE/25A/50-60Hz
- For other voltages, the usage of transformer ZFM30IN30 is required and need to be bought separately
- For ISO attribute explanation, see page 14

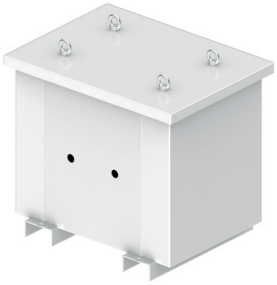
– Metric / *Inch*



Delivery content – 1 Refrigeration unit, including:
1 column for Tubes Support
2 cooling bells with connecting tubes
1 Extension Table

- For usage of refrigeration unit, contact bushing are required, see page(s) 425, 426
- For ISO attribute explanation, see page 14

Group 1
Heat focusing stopper

Group 2
Heat focusing stopper for tools with a larger head*

Group 3
Stop rods set

Group 4
Pair of protective gloves

Group 5
Cooling cone

- * Maximum tool head that can pass through the inductor is 65 mm
- For ISO attribute explanation, see page 14

Threading

Seco

At Seco, we make tools, tech, and solutions for the most advanced manufacturing challenges on Earth. From our founding in Fagersta Sweden, to today's global company, our business has always been made to measure, and built on trust.

Combining cutting-edge, precision tools with lasting, personal partnerships, we're a true people company helping our partners discover the future of the manufacturing industry.

We're proud to make for makers, invent for inventors, and partner with pioneers. Driving the future forward with our focus on innovation. In short - if the right tool for the job exists, we'll deliver it. If it doesn't, we'll create it.

We're proud to put sustainability at the heart of everything we do, challenging perceptions of our industry, changing the process of manufacturing, and playing our own small part in shaping a brighter looking future.

Made for Makers

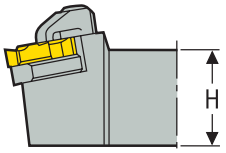
Code keys

Toolholders

C	E	R	25	25	M	16	Q	HD
1	2	3	4	5	6	7	8	9

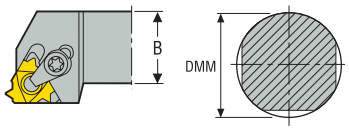
1. Insert clamping

2. External/Internal



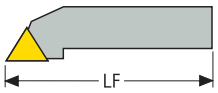
E = External
N = Internal

3. Cutting direction



X = Special

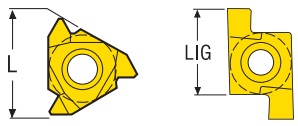
4. Shank height



00 = Round toolholders S & C
25 = 25 mm *(0.984")*
32 = 32 mm *(1.260")*
etc.

5. Shank width/diameter

20 = 20 mm *(0.787")*
25 = 25 mm *(0.984")*
etc.



6. Tool length

H = 100 mm *(3.937")*
K = 125 mm *(4.921")*
L = 140 mm *(5.512")*
M = 150 mm *(5.906")*
P = 170 mm *(6.693")*

Q = 180 mm *(7.087")*
R = 200 mm *(7.874")*
S = 250 mm *(9.843")*
T = 300 mm *(11.811")*
U = 350 mm *(13.780")*
V = 400 mm *(15.748")*

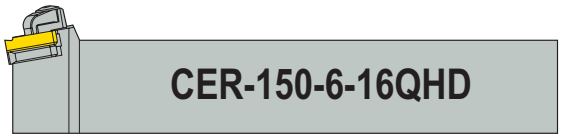
7. Cutting edge length

If the cutting edge length consists of only one digit, the designation should start with a 0.

Example:

Cutting edge length	= 16,5 mm *(0.650")*
Symbol	= 16
Cutting edge length	= 9,525 mm *(0.375")*
Symbol	= 09

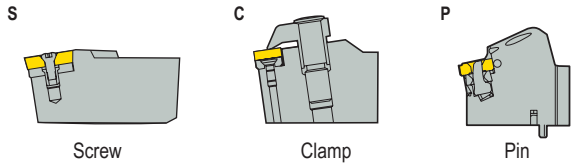
8. Other information



A = Steel with coolant passage
Q = Toolholder/cranked
CQ = For mounting upside down

9. Other information

H = High density bar
HD = Heavy duty
JET = Jetstream Tooling®
JETI = Jetstream Tooling® Jeti



Code keys

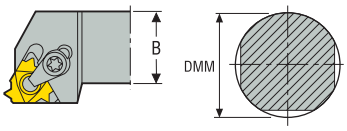
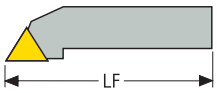
3. Cutting direction



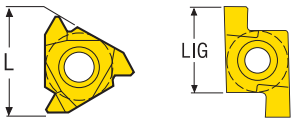
X = Special

4. Shank definition



00 = Boring bars
= Square shanks

5. Square shank height/width and bar diameter



For square shank tools height and width in inches.
For boring bars bar diameter in inches.
075 = 0.75
100 = 1.00
125 = 1.25
etc.

6. Tool length

3 = 3 inches
4 = 4 inches
5 = 5 inches
6 = 6 inches

7. Cutting edge length

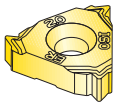
If the cutting edge length consists of only one digit, the designation should start with a 0.

Example:

Cutting edge length	= 16,5 mm (0.650")
Symbol	= 16
Cutting edge length	= 9,525 mm (0.375")
Symbol	= 09

8. Other information

A = Steel with coolant passage
Q = Qualified
CQ = For mounting upside down



9. Other information

H = High density bar
HD = Heavy duty
JET = Jetstream Tooling®
JETI = Jetstream Tooling® Jeti

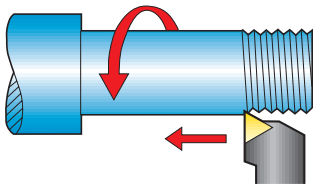
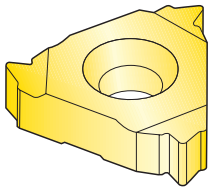
Selection process

Seco Suggest

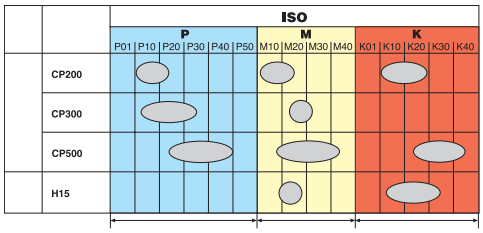


In order to simplify the selection of tools and cutting parameters Seco Tools introduce Suggest which eliminates complicated searching, programming and calculation. Suggest gives you the best suggestion of holder, insert and optimized parameters for your application and the possibility to download information to the CNC machine.

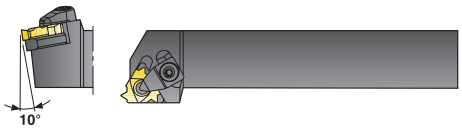
The application can be found at https://www.secotools.com/dashboard/Suggest/Suggest.



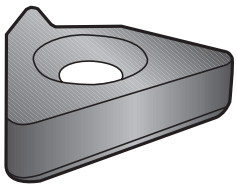
Use the selection process below to choose a suitable tool, insert, cutting data and production method.



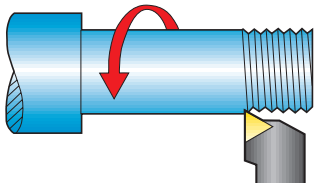
1. Selection of production method, page 8.



2. Selection of insert type, page 9.

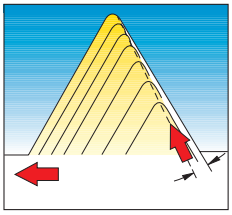


3. Selection of grade, page 10.



4. Selection of toolholder, page 12.

5. Selection of insert shim, pages 13-14.



6. Selection of cutting speed, pages 15-19.

7. Selection of number of passes and infeed depths, pages 20-31.

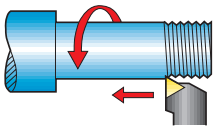
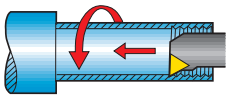
8. Selection of infeed method, page 32.



Production methods



Workpiece
-External or internal thread
-Right or left hand thread
Machine
-Right or left hand tool

Threading towards the chuck		Threading away from the chuck*	
Benefit:	• Best stability • Originally fitted insert shims can be used for most operations	**Benefit:**	• Chip flow is correctly directed during internal threading
Note:	• Chip build-up may occur during internal threading, particularly if there is little space between the threading bar and bore of the hole	**Note:**	• Secure clamping of the insert and mounting of the toolholder are necessary
		Internal threading:	• Use only CNR/L toolholders

Right-hand thread – Right-hand tool

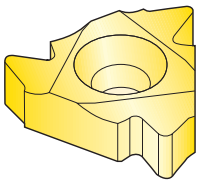
*Notice that the insert shim must be changed when threading away from the chuck.

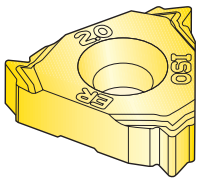
Threading away from the chuck



Threading towards the chuck

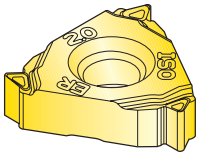
Insert types

For single tooth inserts choose a full profile or partial profile design



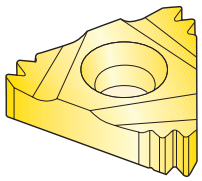
Single-tooth insert (Type S) A or Original

First choice, can be used for applications in a variety of materials. Low cutting forces.



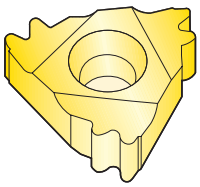
Single-tooth insert (Type S) A1 chipbreaker

First choice for general applications in steel.



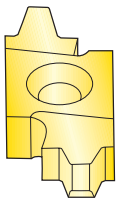
Single-tooth insert (Type S) A2 chipbreaker

First choice for general applications in stainless steel.



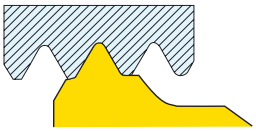
Multi-tooth insert (Type M)

First choice for mass production, since fewer passes are necessary.
Only for radial infeed.
2M = 2 teeth version
3M = 3 teeth version



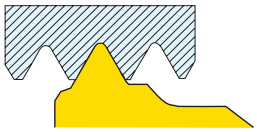
Multi-tooth insert (TWIN THREADER, TT)

Lower cutting forces than M type.
Shorter undercut length than M type.
Only for radial infeed.
Use insert shim for 2M.



K insert (Type K)

First choice for large/coarse threads.

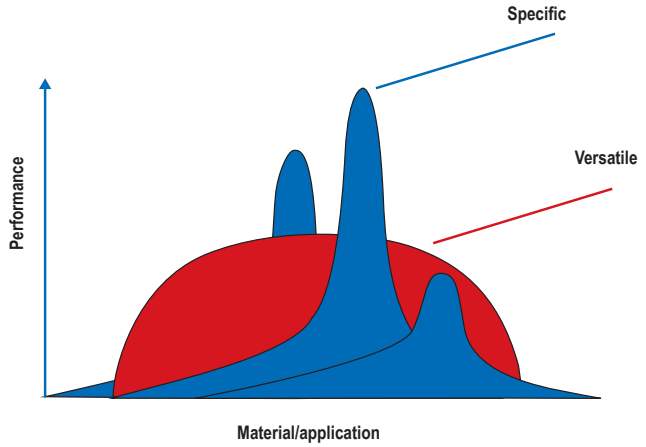


Full profile

By topping the thread, the workpiece need not be pre-machined to the exact diameter and may be a little oversized for external threads and undersize for internal threads. The threading operation is simplified since only one tool is needed for the entire thread (no subsequent deburring is needed).

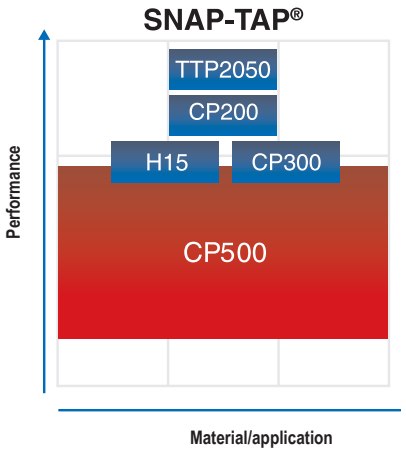
Partial profile

Covers a wide range of thread pitches, which simplifies stock-keeping. Requires a correct workpiece diameter prior to threading. The nose radius of the insert is sized to suit the smallest profile within the pitch range of the insert.



Insert grades

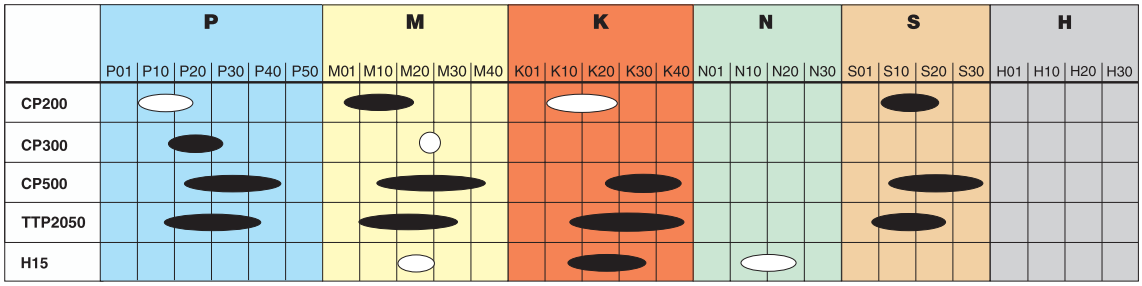
Thread turning – Insert grades



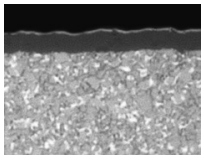
Continuous research and development of better materials, coatings and optimal geometries help fulfil customers requirements.

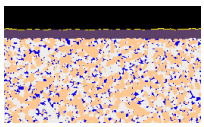
Our product strategy is to provide the market with versatile first choice tools and specific optimized solutions for threading.

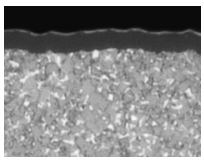
Product strategy grades

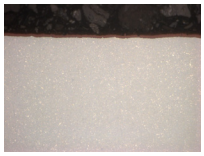


Grade assortment Snap-Tap®









Insert grades

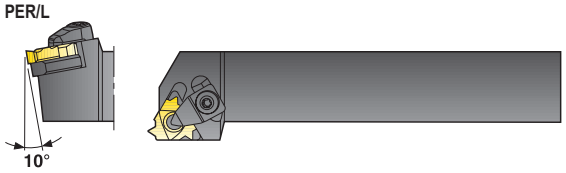
Grades
The black areas in the chart indicate a grade's main ISO application groups and the white areas indicate other supplementary application groups.

PVD coated grades

CP200		First choice for high-strength steel, martensitic stainless steel, cast iron with low hardness, superalloys and titanium alloys. First choice for high cutting speeds. Hard micrograin with sharp edge, highly resistant to plastic deformation. (Ti,Al)N + TiN
CP300		Wear-resistant grade which is principally intended for high cutting speeds. Optimizing grade in steel and stainless steel. (Ti,Al)N + TiN
CP500		Universal very tough micrograin grade for all types of threading in most materials. Excellent for stainless steel and difficult operations. (Ti,Al)N + TiN
TTP2050		Peak performance, wear resistant micrograin grade to be used in steel, stainless steel and cast iron. The nano-laminated coating increases the wear resistance of the grade. (TiAl)N/(TiSi)N
TTP1550		Fine grain wear resistant grade for optimized performance in carbon steels. (TiAl)N

Uncoated grades

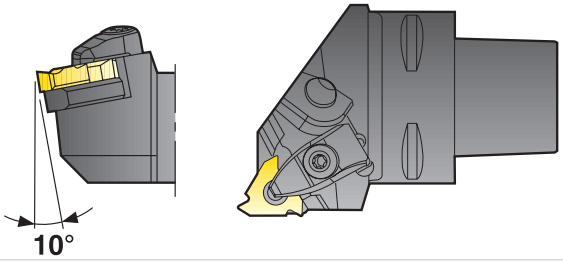
H15		First choice for machining normal to hard cast iron. Also suitable for hard steel with a hardness in excess of 350 HB. Micro-grain with excellent wear-resistance and sharp edge.



Toolholders

Use the guidelines below to choose a suitable toolholder type.

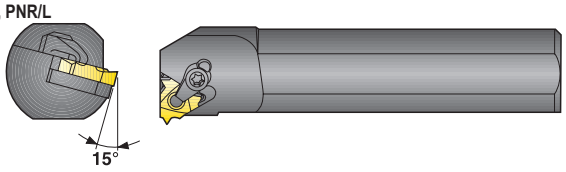
External threading



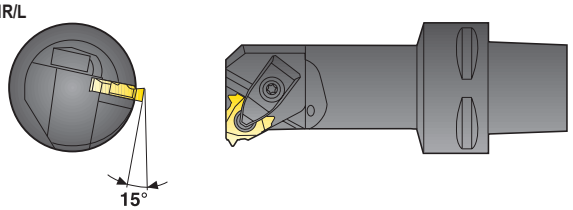
Basic choice
Type C (clamp)
Type P (Pin)

CER/L, PER/L

Insert size
16, 20, 22, 26, 27
With insert shim



Cx-CER/L

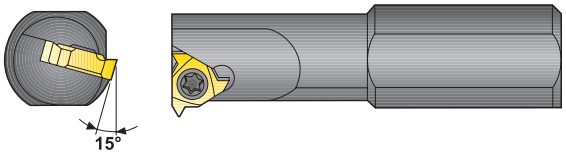


Internal threading

Basic choice
Type C (clamp)
Type P (Pin)

CNR/L, PNR/L

Cx-CNR/L

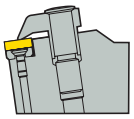


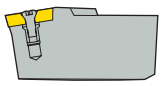
Insert size
16, 20, 22, 26, 27
With insert shim

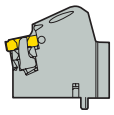
N.B. On 27 mm inserts this angle is 10°

For small holes
Type-S (screw)

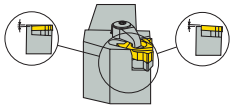
SNR/L





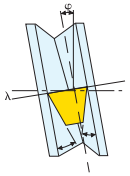


Insert sizes
09,11,16, 22



(No insert shim. To be used only when threading towards the chuck)

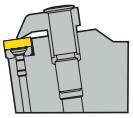
Insert shim

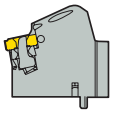


Originally fitted insert shims

The table below shows the originally fitted insert shims. These insert shims are suitable for most operations when threading towards the chuck.

		Clamp		Screw	Jetstream Tooling®
Toolholders		 External and internal threading		 Internal threading	 External and internal threading
Insert type		Single-tooth insert (Type S)	Single-tooth insert (Type K)	Single-tooth insert (Type S)	Single-tooth insert (Type S)
Insert shim				No insert shim (λ=2°)	
Insert size	16	GX 16-1			GXA16-1
	20		KX 20-2		
	22	NX22-1			NXA22-1
	26		KX26-2		
	27	VX27-1			VXA27-1





The helix angle can be selected from +5 to -2 by changing the insert shim. The same insert shims are used for both right and left hand holders. The centre height remains constant.

To receive the correct shape on the thread and uniform wear on the insert the cutting edge helix angle (λ) should be equal to the thread lead angle (φ).

The helix angle (λ) can also be calculated. See page 33 for formula.
SNR/L toolholders have no exchangeable insert shim and can therefore only be used for threading towards the chuck. The table below shows the available insert shim range.

Insert shim range

		Clamp				Jetstream Tooling® Thread turning		
Toolholders		 External and internal threading				 External and internal threading		
Insert type		Multi-tooth insert (Type M)	Single-tooth insert (Type S)		Single-tooth insert (Type K)	Multi-tooth insert (Type M)	Single-tooth insert (Type S)	
Insert shim		 Threading towards the chuck	 Threading towards the chuck	 Threading away from the chuck	 Threading towards the chuck	 Threading away from the chuck	 Threading towards the chuck	 Threading away from the chuck
Insert size	16	MX16-1	GX16-0, -1, -2, -3, -4	GX16-0 -99 -98			MXA16-1	GXA16-0, -1, -2, -3, -4	GXA16-0, -99, -98

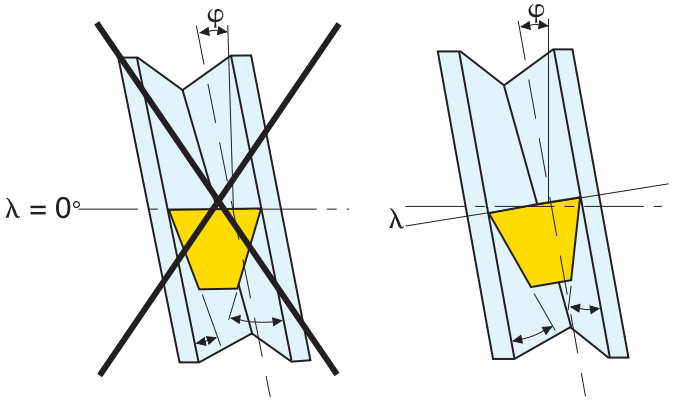
	27	MX27-1	VX27-0, -1, -2, -3, -4	VX27-0 -99 -98			MXA27-1	VXA27-0, -1, -2, -3, -4	VXA27-0,-99,-98

Insert shim

Choice of insert shim



Use the graph below to choose the correct insert shim.
The graph gives the last digit in the insert shim code.
Example: GX16-1

Production method

Threading towards the chuck, use right side of the graph.
Threading away from the chuck, use left side of the graph.

Vertical column - lead

Thread with one start, Lead (Ph) = pitch (P).
Thread with several starts, Lead (Ph) = pitch (P) x number of starts.

Horizontal column = pitch diameter (D_2)

Pitch diameter D_2 – threading away from the chuck

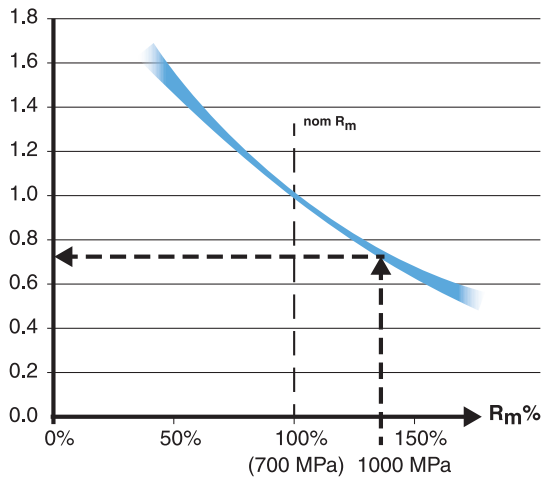
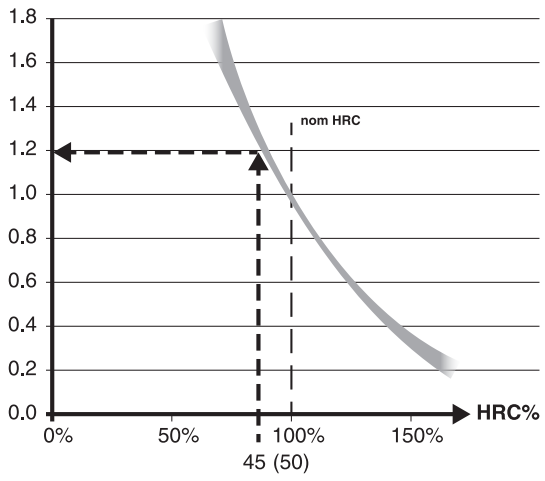
Pitch diameter D_2 – threading towards the chuck

SMG – Cutting data

In SMG classification of workpiece materials involves a specific material standard in a specific condition assigned as reference for easy and unabiguous adjustment of cutting data for any actual material compared to any Seco reference material. As examples the reference materials EN C45E for SMG P4 and EN 42 CrMo 4 for both SMG P5 and SMG H5 shown below in table 1 where the reference level material property is indicated. A more complete extract can be found on page(s) 476-487.



SMG	Description	Properties	Reference
P4	Low-alloy general structural steels, 0.25% < C < 0.67%wt Low-alloy Quench & Temper steels	520 < R_m < 1200	C 45E R_m = 660 N/mm²
P5	Structural steels, 0.25% < C < 0.67%wt Quench & Temper steels	550 < R_m < 1200	42 CrMo 4 R_m = 700 N/mm²



SMG	Description	Properties	Reference
H5	Quenched & Tempered steels	38 < HRC < 56	42 CrMo 4 50 HRC

Focusing specifically on EN 42 CrMo 4 in annealed condition, the ultimate tensile strength R_m may typically vary between Rm = 630 N/mm² and R_m = 780 N/mm², which provide a reference level for SMG P5. In Quenched & Tempered condition, the ultimate tensile strength R_m may typically be between R_m = 900 N/mm² and R_m = 1100 N/mm² thus still belongs to SMG P5. However, if hardened above R_m = 1200 N/mm² it instead belongs to SMG H5.

SMG	EN	W.-Nr	AFNOR	BS	UNI	JIS	AISI / ASTM	GOST	Condition	R_{m_nom}	HRC_{nom}
P5	42 CrMo 4	1.1201	42 CD 4	708 M 40	42 CrMo 4	SCM 440 (H)	4142, 4140	38HM	Annealed	700	
	42 CrMo 4	1.1201	42 CD 4	708 M 40	42 CrMo 4	SCM 440 (H)	4142, 4140	38HM	Quenched & Tempered	1000	
H5	42 CrMo 4	1.1201	42 CD 4	708 M 40	42 CrMo 4	SCM 440 (H)	4142, 4140	38HM	Quenched & Tempered		45
	42 CrMo 4	1.1201	42 CD 4	708 M 40	42 CrMo 4	SCM 440 (H)	4142, 4140	38HM	Quenched & Tempered		50

The EN 42CrMo4 quench & tempered steel could be used to illustrate the machinability dependence of materials' condition.
The graphs below indicate how speed recommendations for a nominal material conditions may be adjusted for relative R_m (left diagram valid for ISO-P) and for relative HRC (valid for ISO-H).

To further illustrate how the SMG P5 nominal v_c can be adjusted to a more accurate recommended v_c we need ultimate tensile strength R_m data and in this case we use the EN 42 CrMo 4 quenched & tempered to R_m = 1000 N/mm² according to above table (bold blue arrows).
Assume that we find that the SMG P5 nominal v_c = 280 m/min for a certain product and machining.
Then, actual recommended v_c = 280 m/min x 0,75 = 210 m/min.
Consequently in the SMG H5 the nominal v_c can be adjusted using the hardened EN 42 CrMo 4 at HRC 45 (smaller grey arrows).
Assume that the SMG H5 nominal v_c = 50 m/min for a certain product and machining using a coated cemented carbide tools then, actual recommended v_c = 50 m/min x 1,2 = 60 m/min.
For further workpiece material details please see page(s) 476-487 and suggested cutting data at applicable pages.
For more convenient cutting data handling we recommend applicable tools in My Pages – Suggest on www.secotools.com

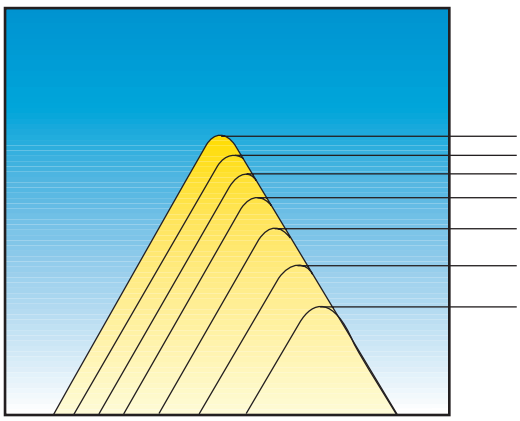
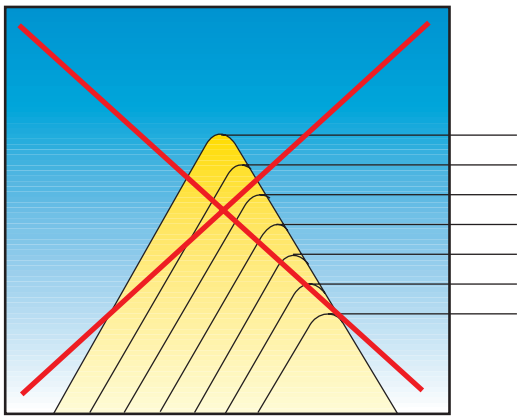
Use the SMG tables to classify the workpiece material. Use the table to choose cutting speed. Cutting speeds (v_c) in the table are recommendations for a start value. Due to machine, material and setup condition it is advisable to optimize cutting data. Recommended ranges to use for each grade is CP200, CP300, CP500, TTP2050 and H15 +/-15%



SMG=Seco Material Group
v_c = Cutting speed (m/min)



Note that there is a fixed relationship between rotational speed and feed rate in threading. Check that the chosen cutting speed does not result in a too high feed speed.

Number of passes and infeed depths

A thread cannot be made in one cut because of the relatively brittle cutting edge. The total cutting depth must be divided into several passes. Those passes should all have similar cutting forces (equal chip areas), see figures.

Use the tables on page 20-31 to find recommendations for number of passes and infeed depths. The tables give basic recommendations and are applicable on all geometries - Original, A, A1 and A2.

- The infeed series given is based on a good control of the OD/ID tolerances for the selected profile.
- If insert fracture should occur, the number of passes should be increased.
- The infeed depth should not be less than 0,05 mm (0.0020") /pass.
- On stainless steel, the infeed depth per pass should be greater than 0,08 mm (0.0031").
- The recommendations can also be used for part-profile inserts. The number of passes should then, in most cases, be increased.
- The threading insert nose radius is relatively small and can easily be damaged if it is overloaded.

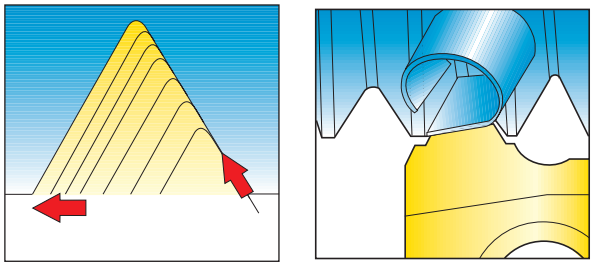
Infeed method

The choice of infeed method is most important for long chipping materials to ensure good chip control.

Modified flank infeed

For CNC machines and conventional machines

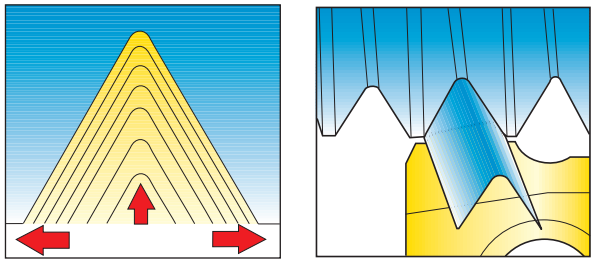


First choice for CNC machines
The infeed angle should be 2,5–5% less than the flank angle

- Good chip control (important for internal threading)
- Good surface finish on thread
- Long tool life

Flank infeed

For CNC machines and conventional machines

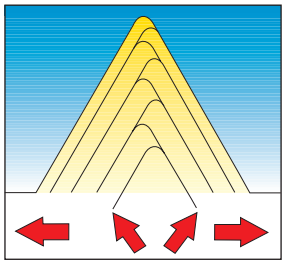


Choose flank infeed when modified flank infeed cannot be used

- Good chip control
- Can result in bad surface on thread
- Not suitable for work hardening materials

Radial infeed

For conventional machines and multi-tooth inserts



Multitooth inserts demand radial infeed
First choice for work hardening materials

- Difficult to control the chip
- High cutting forces

Alternate flank infeed

For CNC machines

First choice for large coarse threads

- Long tool life
- Chipbreaking problems can arise

Nomenclature and formula

RPM

$$n = \frac{v_c \cdot 1000}{\pi \cdot D_c} \quad \text{(rev/min)}$$

Cutting speed

$$v_c = \frac{n \cdot \pi \cdot D_c}{1000} \quad \text{(m/min)}$$

Slide velocity/feed rate

$$v_f = \frac{n \cdot P_h}{1000} \quad \text{(mm/min)}$$

Lead

$P_h = P \cdot$ numbers of starts (mm)

Helix angle

$$\lambda = \arctan \frac{P_h}{D_2 \cdot \pi} \quad (°)$$

Conversion of P to TPI

$$TPI = \frac{25{,}4}{P}$$

D_c = Workpiece diameter (mm)
D_2 = Pitch diameter (mean diameter) (mm)
n = RPM (rev/min)
P = Pitch (mm)
P_h = Lead (mm)
v_f = Slide velocity (feed rate) (m/min)
TPI = Number of threads per inch
v_c = Cutting speed (mm/min)
λ = Helix angle (°)

RPM

$$n = \frac{v_c \cdot 3.82}{D} \quad \text{(rev/min)}$$

Cutting speed

$$v_c = \frac{0.262 \cdot D \cdot n}{1000} \quad \text{(sf/min)}$$

Slide velocity/feed rate

$$Sv = \frac{n \cdot P_h}{1000} \quad \text{(in/min)}$$

Lead

$P_h = P \cdot$ numbers of starts (inch)

Helix angle

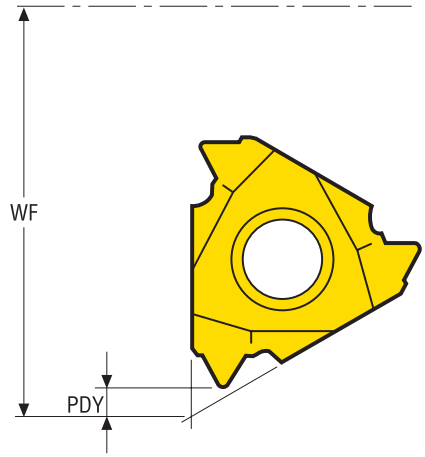
$$\lambda = \arctan \frac{P_h}{D_2 \cdot \pi} \quad (°)$$

Conversion Pitch – TPI

$$P = \frac{1}{TPI}$$

D = Workpiece diameter (inch)
D_2 = Pitch diameter (effective diameter) (inch)
n = RPM (r/min)
P = Pitch (inch)
P_h = Lead (inch)
Sv = Slide velocity (in/min)
TPI = Thread per inch
v_c = Cutting speed (sf/min)
λ = Helix angle (°)

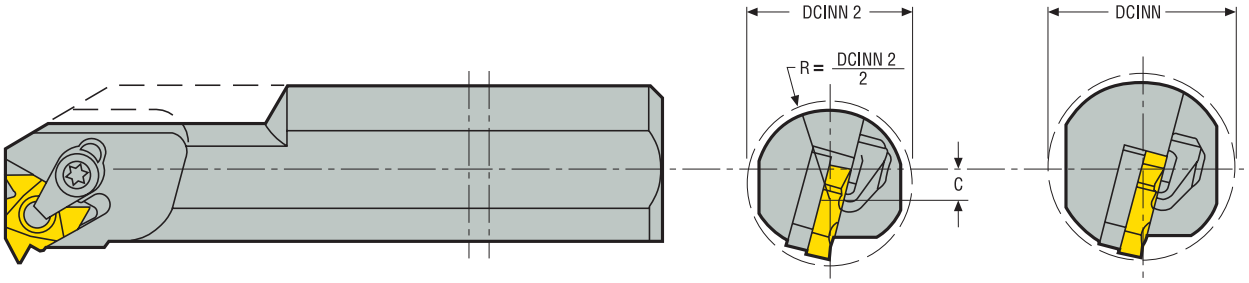
Toolholder modification to thread small ID



It is often necessary to cut internal threads which are too small to be made with a standard toolholder.

Several standard internal toolholders can be modified by a simple reworking so that threads can be cut in approximately 30% smaller bores.
This modification work can be made on an lathe with a four-jaw chuck.
In the dimension table DCINN at pages 'Toolholders Internal' you will find the dimensions required for the alteration.

On demand, these internal toolholders can also be supplied as special design.

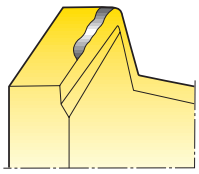


For some holders it is possible to work inside smaller bores than indicated by the DCINN2 dimension, here it is necessary "to back off" the bottom corner of the insert (possibly also the insert shim).

Reference dimensions on insert

WF and PDY dimensions can be found on the pages for internal toolholders and threading inserts.

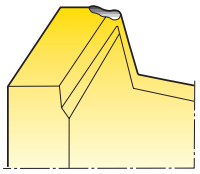
Reference dimensions on bar



C = WF – PDY + R – DCINN2

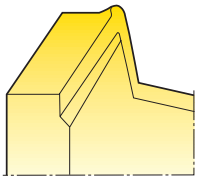
C = Centre-point displacement when modifying the tool.
DCINN = Minimum bore diameter of standard tool.
DCINN2 = Minimum bore diameter with a modified tool.

Troubleshooting



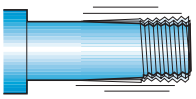
Rapid flank wear

- Reduce the cutting speed
- Increase the infeed per pass
- Use modified flank infeed
- Check that the correct insert shim has been selected
- Select a more wear-resistant grade



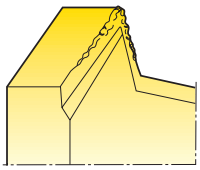
Insert fracture

- Increase the number of passes
- Check the workpiece mounting
- Check the centre height of the cutting edge
- Check for built-up edge
- Select a tougher grade



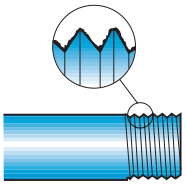
Plastic deformation

- Select a grade with better resistance to plastic deformation
- Reduce the cutting speed
- Increase the number of passes
- Increase the coolant supply
- Check that the workpiece diameter is correct prior to cutting the thread



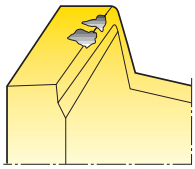
Vibrations

- Change the cutting speed
- Reduce the overhang and use the most stable toolholder
- Check the centre height of the cutting edge
- Check that the workpiece diameter is correct



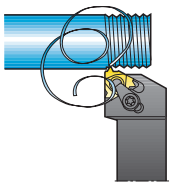
Build-up edge

- Increase the cutting speed
- Do not use coolant



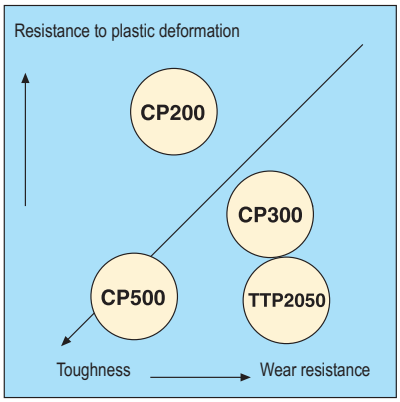
Poor finish

- Increase the cutting speed
- Check that the correct insert shim has been selected
- Use modified flank infeed or radial infeed



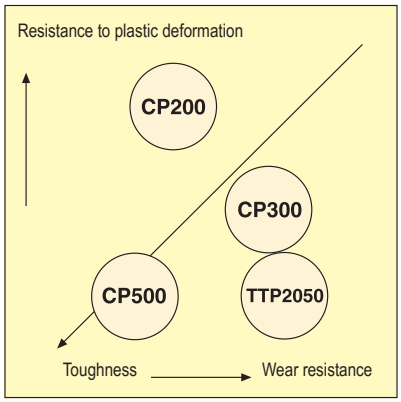
Edge chipping

- Check the workpiece mounting
- Check the cutting speed
- Use modified flank infeed
- Select a tougher grade

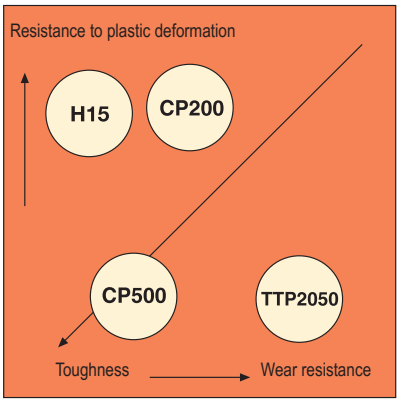


Poor chip control

- Reduce the number of passes
- Increase the cutting speed
- Use modified flank infeed
- Increase the coolant supply



Optimisation



ISO-P (steel)

ISO-M (stainless steel)

ISO-K (cast iron)

Torque values for clamping screws

For the Seco range of torque keys, please see next page

Torque keys

The range of torque keys with fixed torque values are available, in combinations key grip/torque value for insert locking, for most of the Seco turning products. By using a torque key you always ensure the correct tightening force when mounting the insert. The torque value is given on page(s) 36 for each screw. Torque keys are calibrated according to ISO 6789.

Code key: T00-15P35

T00 = Torque screwdriver type for Torx Plus blade
T00T = Torque T-handle type for Torx Plus blade
H00 = Torque screwdriver for hexagonal blade
H00T = Torque T-handle type for hexagonal blade

15P = Torx Plus size
35 = Torque value 3,5 Nm

Jetstream Tooling® Introduction

Seco Jetstream Tooling® is a revolutionary solution to the problem of delivering coolant precisely to the cutting zone.

It works by delivering a concentrated high pressure jet of coolant at high velocity straight to the optimum position precisely to the cutting edge.

The jet lifts the chips away from the rake face, improving chip control and tool life, enabling increased cutting data.

It has been proven to show improvements in nearly all material groups with a wide choice of coolant pressures.

Seco Jetstream Tooling® Duo holders, yet another innovation introduced to the market, features both a rake face and a flank face jet, that may provide even better chip control and significantly longer tool life.

For many years, Seco has been supporting the market with Jetstream Tooling® solutions for ISO-turning and grooving applications. Now the Jetstream Tooling® technique will also be available on holders for thread turning (Snap-Tap®).

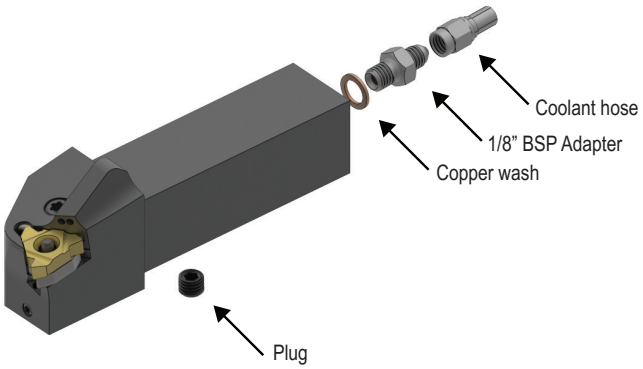
Coolant can either be supplied to the toolholder externally through a coolant hose, which is attached to one of the inlet positions of the toolholder, or by the new JETI connection.

When it comes to boring bars, the coolant is supplied internally from the back end.

For internal applications, holders for Steadyline® bars are also available, designated GL-. Please see more information regarding Steadyline® in catalog Turning.

Square shank holders for external applications are designed with the Duo technique. They also have the option for coolant supply through JETI connection.

The JETI is developed with a compact assembly in mind, the tooling eliminates the need for any external piping and connections that would otherwise obstruct machine movements in tight workspaces. Coolant hole underneath the square shank holder make it possible for coolant to reach the cutting edge directly from the tool block.

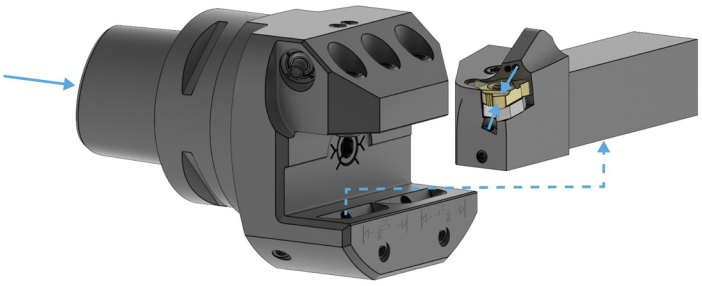


Jetstream Tooling® Assembly instructions

Description of parts

For personal safety, Jetstream Tooling® should only be used with the machine door in a fully closed position in accordance with general machine safety procedures.

Please ensure that the coolant hose is located correctly and fully tightened with all seals in position. The unused coolant hole should have a blanking plug fitted. Please note the maximum safe working pressures shown below.



For accessories, see next page.

JETI Assembly instructions

To use the benefits of a JETI-holder there is a need to use a basic holder designed for JETI-connections. Maximum coolant pressure when using this feature is 150 bar.

Note: The unused coolant hole (from the back) should have a blanking plug fitted.

Accessories and spare parts

Hoses, Part No. ordering code includes spare parts

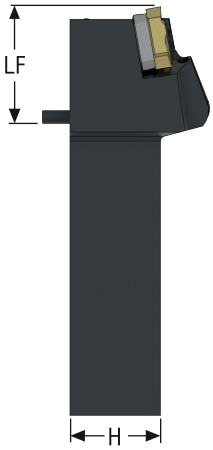
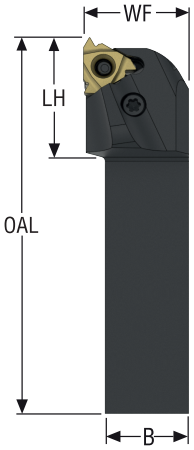
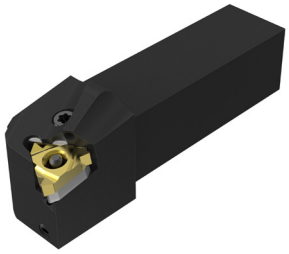
Thread turning Toolholders



The innovative toolholders made for use with Snap-Tap® inserts offer the best possible holding power available for long tool life and high accuracy. They employ an Anti-Twist insert locking system that features a carbide pin in the back of the insert pocket that resists wear and prevents the insert from turning or twisting under pressure during machining.



- Anti-Twist Toolholders.
- D-style clamp for securely pulls insert down and into the pocket.



Jetstream Tooling® – Toolholders, external

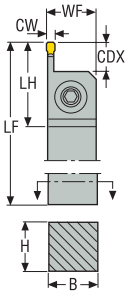
Thread turning MDT

The highly stable and reliable Seco MDT (Multi-Directional Turning) system consists of holders and inserts that offers excellent performance in thread-turning operations. Products are available for both external and internal threads. Its unique clamping method is a combination of V-shaped top clamp and serrated contact surfaces between the underside of the insert and toolholder, resulting in superb stability.



- External and Internal threads.
- Unique clamping method.
- V-shaped top clamp secure stability.

MDT Toolholders, external

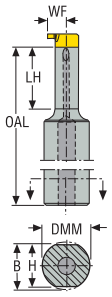
Thread turning Mini-Shaft™



The highly versatile Mini-Shaft™ consists of inserts and holders providing stable, high-precision internal threading operations. Mini-Shaft™ features a special double-serrated joint that creates a secure connection point for its exchangeable inserts and toolholders, resulting in a repeatability of +/- 0.02 mm (+/- .0008 inch).

- All toolholders can accommodate R- and L-handed inserts.
- Through coolant possibility.
- Use in holes as small as 8 mm (0.315 inch).

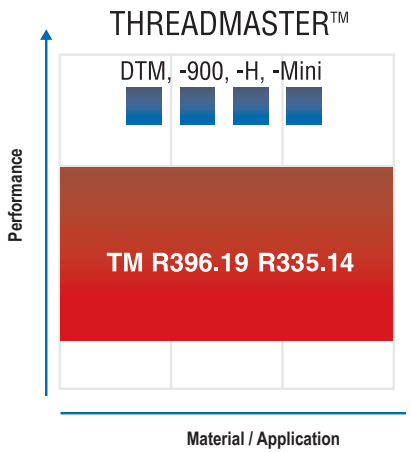
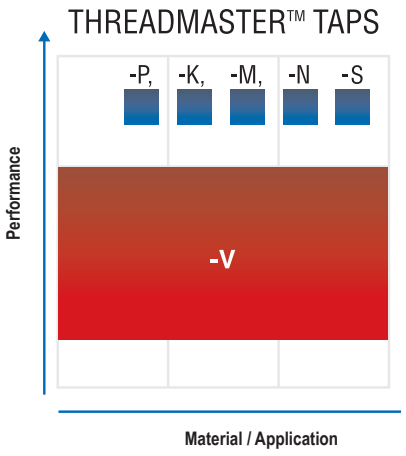
Versatile & Specific

Thread milling and Tapping – Choice of tool



Continuous research and development of better materials, coatings and optimal geometries help fulfil customer's requirements.



Our product strategy is to provide the market with versatile first choice tools and specific optimized solutions for threading.

Product Strategy

Product Assortment

Thread milling – Choice of cutter, inserts and cutting data

Solid carbide cutter – Threadmaster™

1. General

The same cutter can be used for machining both right and left hand threads. Metric and UN versions are only for internal threading. The remaining of the range can be used for both external and internal threading.

- The cutters are regrindable

2. Select cutter diameter

- Look up the pages with the Threadmaster programmes
- Look up the column for the required thread type
- Look up the required pitch
- When more alternatives are available note that:

- Smaller cutter diameter allows smaller threading diameter (minimum thread diameter is found in the designation).
- Larger cutter diameter allows larger threading depth (maximum threading depth is 2 x cutter diameter, D_c).

3. Selection of cutter

- TM: Basic choice
- TM...-900: Choice for steel and stainless steel with tensile strength > 900 N/mm^2
- TM...-H: Choice for hardened steel with hardness 45-60 HRC
- DTM: Drill, thread and chamfer with same tool. To be used in aluminium and cast iron

4. Select cutting data

- Use the tables beginning on page 476 to classify the workpiece material into a SMG (Seco Material Group)
- Cutting speed recommendations are found on the cutting data page for Threadmaster
- Feed per tooth (= flute) recommendations are found on the cutting data page for Threadmaster
- Formulae for cutting data calculation are on page 209
- For best suggestion and performance use Seco Suggest https://www.secotools.com/dashboard/Suggest/Suggest.

5. Machining methods

- Helical interpolation must be used to create the pitch
- Clockwise or counterclockwise feed direction can be used depending on thread type and machining method (right or left hand), external or internal thread
- Climb milling is recommended
- Coolant supply is recommended. Except when threading hardened material
- Special machining recommendations for certain workpiece materials are found on the cutting data page for Threadmaster

Feed recommendations

Threadmaster™

- Feed recommendations for TM-M4X0.7ISO-6R1 except for TM-Mini, that recommendation is for TM-M1.0X0.25ISO-3R1-H and only a start value
- For best suggestion and performance use Seco Suggest https://www.secotools.com/dashboard/Suggest/Suggest
- All feed are related to the centre of the cutter and not the periphery
- In the entrance loop reduce feed by 50%. In the exit loop increase feed by 50%
- In the entrance and exit loop feed the cutter 15% of the pitch axially
- For free cutting steel, low alloy and ferritic steel, quench & temper steel, low to medium alloy stainless steels and austenitic cast irons, leave 0,05 mm in a_e for a finishing cut
- For high strength steels, martensitic and high alloy stainless steels, Ni-based superalloys and titanium alloys remove 2/3 of a_e in the first cut and the remaining 1/3 in the second cut
- For hardened steels remove 1/3 of a_e in the first cut, 1/3 of a_e in the second cut and the remaining 1/3 in the third cut
- For NPT and NPTF threads take the whole a_e in one cut
- Coolant is recommended (except when using -H in hardened materials)
- The Metric and UN thread mills are only for internal threads

TM-Mini:

- Left-hand cutting (M4)
- Do the entrance loop before entering into the workpiece

DTM:

- Use peck drilling

Choice of cutter, inserts and cutting data

1. General

- The same cutter can be used for machining external and internal, right-hand and left-hand threads

2. Select cutter diameter

- Look up the pages for thread milling cutters and choose a suitable diameter in the tool data table
- The insert size varies with the cutter diameters. Check the available insert programme for the different sizes before deciding cutter diameter
- For internal thread milling check the 'minimum thread diameter' table before deciding cutter diameter. This table shows the relation between the cutter diameter and the smallest thread diameter to be machined

3. Select insert

- Look up the thread milling inserts pages and choose the required thread type in the correct insert size for the cutter. Choose the grade F30M/ CP500 for general machining

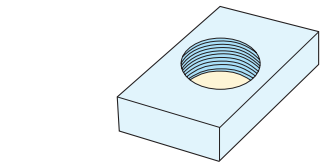
4. Select cutting data

Radial cutting depth

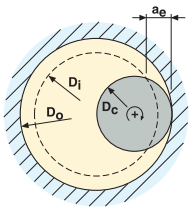
- Use the formulae to calculate the radial cutting depth (a_e). (See figures)

Feed rate

- Divide the radial cutting depth with the cutter diameter to get the actual cutter engagement percentage (a_e/D_c%). Use the cutting data table to get a feed per tooth recommendation, see page(s) 219 - 224.



Cutting speed



- Use the tables beginning at page 476 to classify the workpiece material into a Seco Material Group.
- Cutting speed recommendations (for 10% engagement) are in the basic cutting speed table in the catalogue
- For safety reasons, maximum rpm that should never be exceeded
- Formulae for cutting data calculation are found on page 209

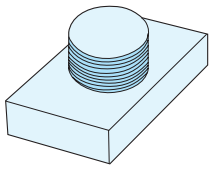
5. Machining methods

- Helical interpolation must be used to create the pitch
- Clockwise or counterclockwise feed direction can be used depending on thread type and machining method (right or left hand, external or internal thread)
- Climb milling and coolant is recommended. Coolant supply is recommended except when threading hardened material

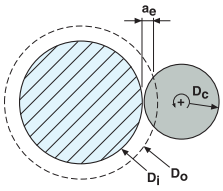
Internal

$D_i = D_o$ - 2h

Thread	
ISO	0,60 x p
UN	0,60 x p
W	0,69 x p
BSPT	0,69 x p
NPT	0,78 x p



Radial infeed value a_e:



$$a_e = \frac{D_o^2 - D_i^2}{4\,(D_o - D_c)}$$

p = pitch (mm)
h = depth of thread

D_c = Cutter dia
D_o = Major dia
D_i = Minor dia

External

$D_i = D_o$ - 2h

Thread	
ISO	0,65 x p
UN	0,65 x p
W	0,69 x p
BSPT	0,69 x p
NPT	0,78 x p

Radial infeed value a_e:

$$a_e = \frac{D_o^2 - D_i^2}{4\,(D_i + D_c)}$$

p = pitch (mm)
h = depth of thread

D_c = Cutter dia
D_o = Major dia
D_i = Minor dia

Choice of cutter, inserts and cutting data

RPM

$$n = \frac{v_c \cdot 1000}{\pi \cdot D_c} \quad \text{(rev/min)}$$

Cutting speed

$$v_c = \frac{n \cdot \pi \cdot D_c}{1000} \quad \text{(m/min)}$$

Feed speed

$$v_f = n \cdot z_n \cdot f_z \quad \text{(mm/min)}$$

$$v_f = n \cdot z_c \cdot f_z \quad \text{(mm/min)}$$

Feed per revolution

$$f = z_n \cdot f_z \quad \text{(mm/rev)}$$

$$f = z_c \cdot f_z \quad \text{(mm/rev)}$$

D_c = Cutter diameter (mm)
f = Feed per revolution (mm)
f_z = Feed per tooth (mm/tooth)
z_c = Effective No. of teeth for calculation of feed speed or feed per rev

n = RPM (rev/min)
v_c = Cutting speed (m/min)
v_f = Feed speed (mm/min)
z_n = No. of teeth

RPM

$$n = \frac{v_c \cdot 3.82}{D_c} \quad \text{(rev/min)}$$

Cutting speed

$$v_c = \frac{n \cdot D_c}{3.82} \quad \text{(sf/min)}$$

Feed speed

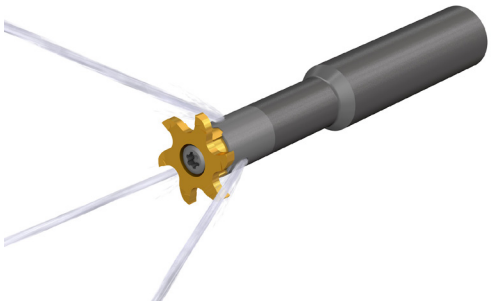
$$v_f = n \cdot z_n \cdot f_z \quad \text{(in/min)}$$

$$v_f = n \cdot z_c \cdot f_z \quad \text{(in/min)}$$

Feed per revolution

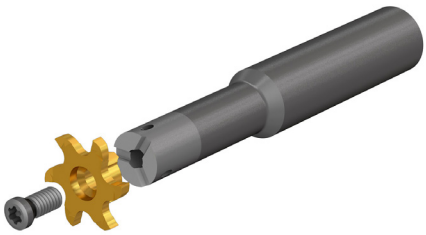
$$f = z_n \cdot f_z \quad \text{(in/rev)}$$

$$f = z_c \cdot f_z \quad \text{(in/rev)}$$



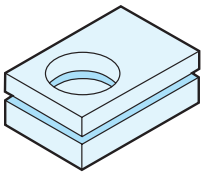
D_c = Cutter diameter (inch)
f = Feed per revolution (inch)
f_z = Feed per tooth (in/tooth)
z_c = Effective No. of teeth for calculation of feed speed or feed per rev

n = RPM (rev/min)
v_c = Cutting speed (sf/min)
v_f = Feed speed (sf/min)
z_n = No. of teeth

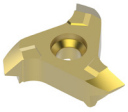


Disc Milling cutter 335.14

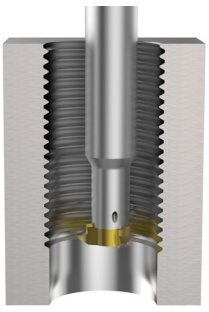
Disc milling cutter with exchangeable carbide head from diameter 9,7 mm *(0.382")*



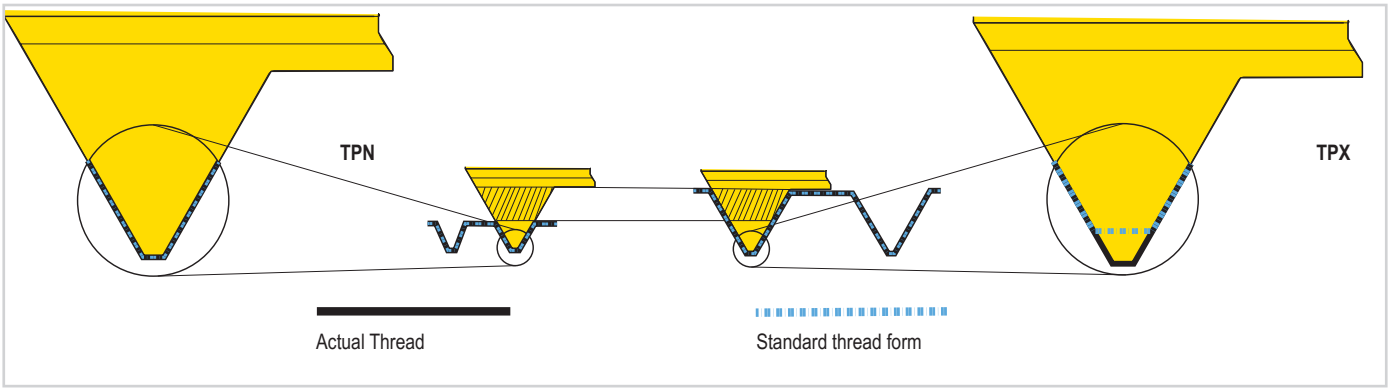
A broad range of heads and shanks available for all your disc milling operation by circular interpolation or linear slotting.



Strong, reliable and precise connection between the head and the cutter body.



Cover all type of material with universal M geometry and F32M grade.

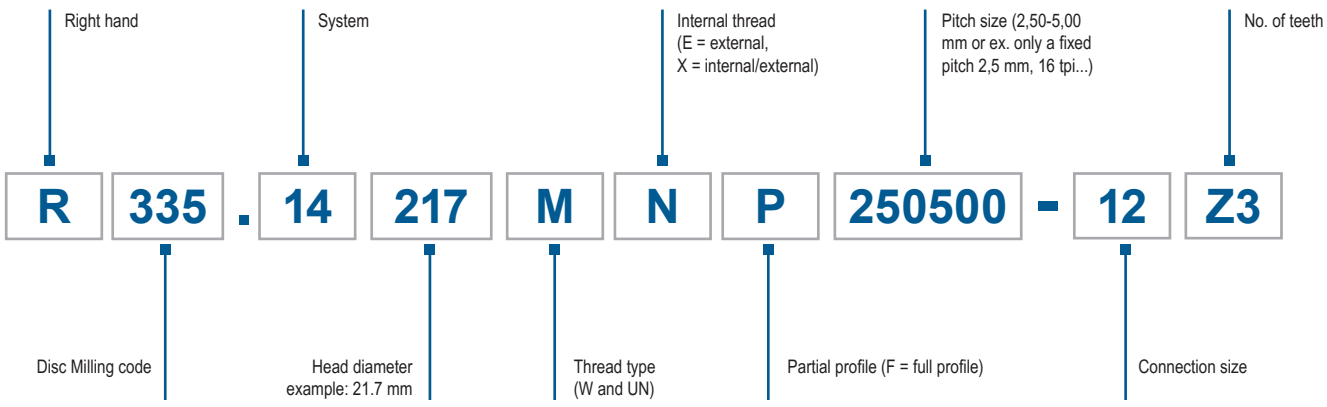


Threading:
Head from dia 11,7 to 27,7 mm *(0.461 to 1.091")* for partial metric threads with pitch 1-6 mm *(0.039-0.236")* and full profile whitworth threads with pitch 19 to 11 tpi and UN threads with pitch 24 to 6 tpi.

Deviation from standard thread profile

Thread milling by circular interpolation can cause thread profile violation when using insert designed for partial thread. Keep this in mind while selecting a tool. The tool diameter needs to be small enough compared to the hole diameter. The pitch also needs to be considered.

Insert with partial profile for Metric ISO-Threads are multi tools. That means that each insert could machine different pitches. The insert is designed to meet the minimum pitch size (TPN); Machining this pitch will result in a thread form that conforms to the standard.



The recommended maximum pitch size (TPX) can also be machined with this insert at the expense of standard conformity: The result will be a slightly deeper thread than the standard. The deeper thread is normally accepted, but the application and use needs to be evaluated.

Following table is a recommendation over maximum tool diameter in relation to the thread size and pitch:

ISO-Thread, partial profile

Pitch	M12	M16	M20	M24	M27	M30	M36	M42	M48	M56	M60
1	10	14	18	22	25	28	34	40	45	53	57

Threadmaster™

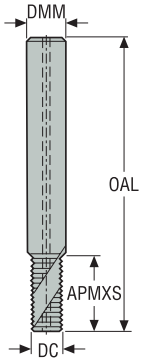
Threadmaster™ thread mills provide high thread quality at low cost per hole. Machining up to 100 percent depth, Threadmasters have high helix angles that reduce cutting forces and eliminate chatter. They feature an excellent carbide substrate and TiCN-coating (TM and TM-900) or TiAlN-coating (TM-H and DTM) for high toughness and wear resistance milling aluminum, steel, stainless steel and cast iron.



Drilling Threadmaster is a multi-tool producing a thread by drilling and chamfering in a single pass for high thread quality at a low cost per hole.

- Some versions with through-coolant holes.
- Threads range from M4 to M20.
- Mini thread mills for thread sizes from M1 - M2.5.

SMG = Seco Material Group
f_z = mm/tooth (mm/flute)
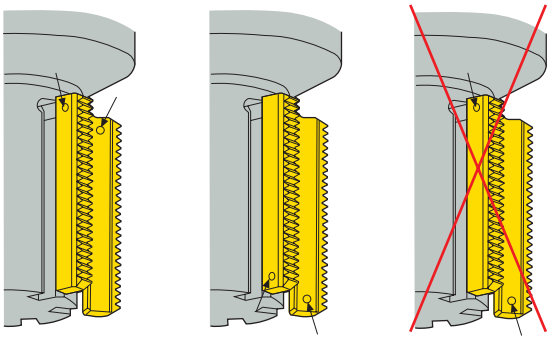
v_c= m/min (for holder types -065AM, -079AM and -080AM use factor 0,75 on vc)
All cutting data are start values

All feed are related to the centre of the cutter and not the periphery.



Feed related to the centre of the cutter

When calculating feed and feed/tooth from average chip thickness using circular interpolation or helical interpolation ramping in an operation, the feed and feed/tooth are always related to the centre and not to the periphery of the cutter.

Tolerance on the machined component.

The tolerance on the thread diameter is 6H when using a cutter with more than one tooth. With a single cutting insert the tolerance is 4H. If a multi-tooth milling cutter is used with one cutting insert, the other insert seat(s) must be equipped with non-cutting blank insert(s) to stabilise the milling cutter during the cutting process.

As all 396.19 inserts are double sided, it is important that all inserts are mounted in the same position to achieve best possible tolerance. It must be done by indexing the identification dots in the same position. See figure.

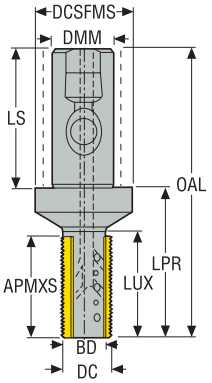
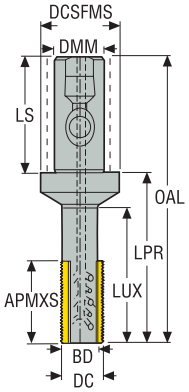
Thread milling Indexable



Seco 396.18/19/20 thread mills are versatile, cost-effective process tools for anyone facing a variety of threads, parts and workpiece materials on the same machine. Multi-tooth indexable insert cutters use a double sided multi-tooth insert usable above Ø 14 mm for both internal and external threads.



- Inserts available with different thread profiles and pitches.
- Multi-tooth cutters for high productivity.
- Arbor, Weldon and SecoWeldon shanktypes.

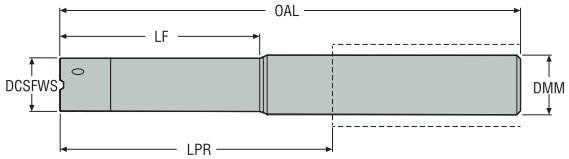
Thread milling Shanks

Generate precision threads in holes as deep as 106 mm with Seco's new single raw Disc Mill 335.14 interchangeable threading heads and matching holder shanks. You will also be able to boost processing speed and versatility, as each head performs both chamfering and threading operations. Additionally, performing two operations with the same tool helps reduce required tooling inventories.

- Both carbide and steel shank types.
- Internal coolant capability.
- Over 31 different carbide-coated heads.

335.14 Shank - Cylindrical version



- For cutting data see page(s) 224, 226
- Technical information, see page 211, 213
- -E = Carbide shank with DMM tolerance = h6
- Steel shank: DMM tolerance = g6
- Max RPM = 30 000 rev/min

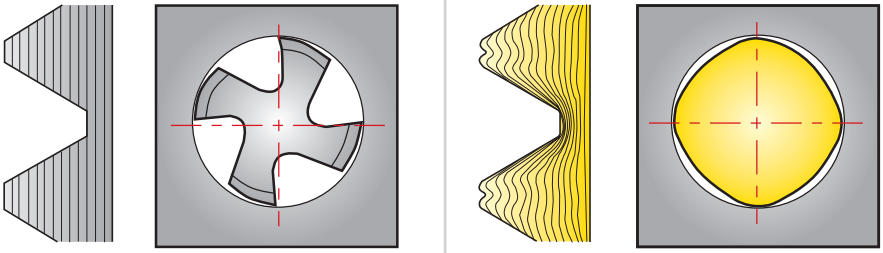
Threadmaster™ Taps

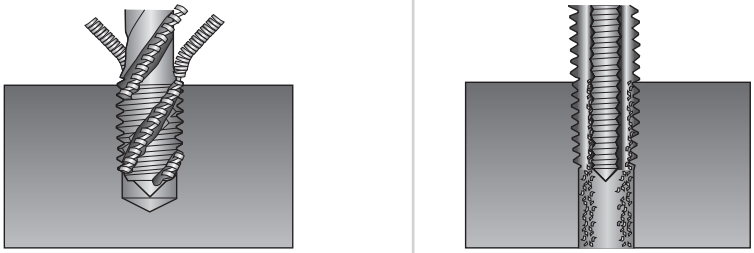
Designed to be universal in application, the high-speed steel Threadmaster Tap effectively threads holes in a wide range of workpiece types and materials. The tool features an advanced coating technology that enables it to achieve higher cutting data and output in steel up to 350 HB, stainless steels and cast irons when compared to the uncoated solutions typically found in this product area.



- Features spiral helixes for blind holes and spiral points for through holes.
- Straight flutes accommodate for short chipping materials.
- Advanced coatings for faster tapping.

Introduction to taps

What are you looking for in a thread?

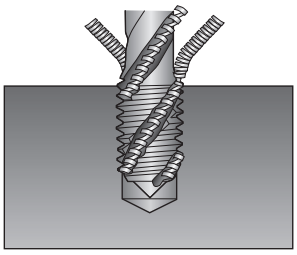


Cutting a thread vs forming a thread

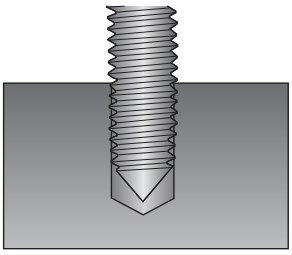
There are two way of making a thread, cutting or forming. Cutting is to be used in most materials, while forming is to be used in steel, stainless steel and aluminium.

Through hole, blind hole

Taps have different designs. Depending on application (through or blind hole).

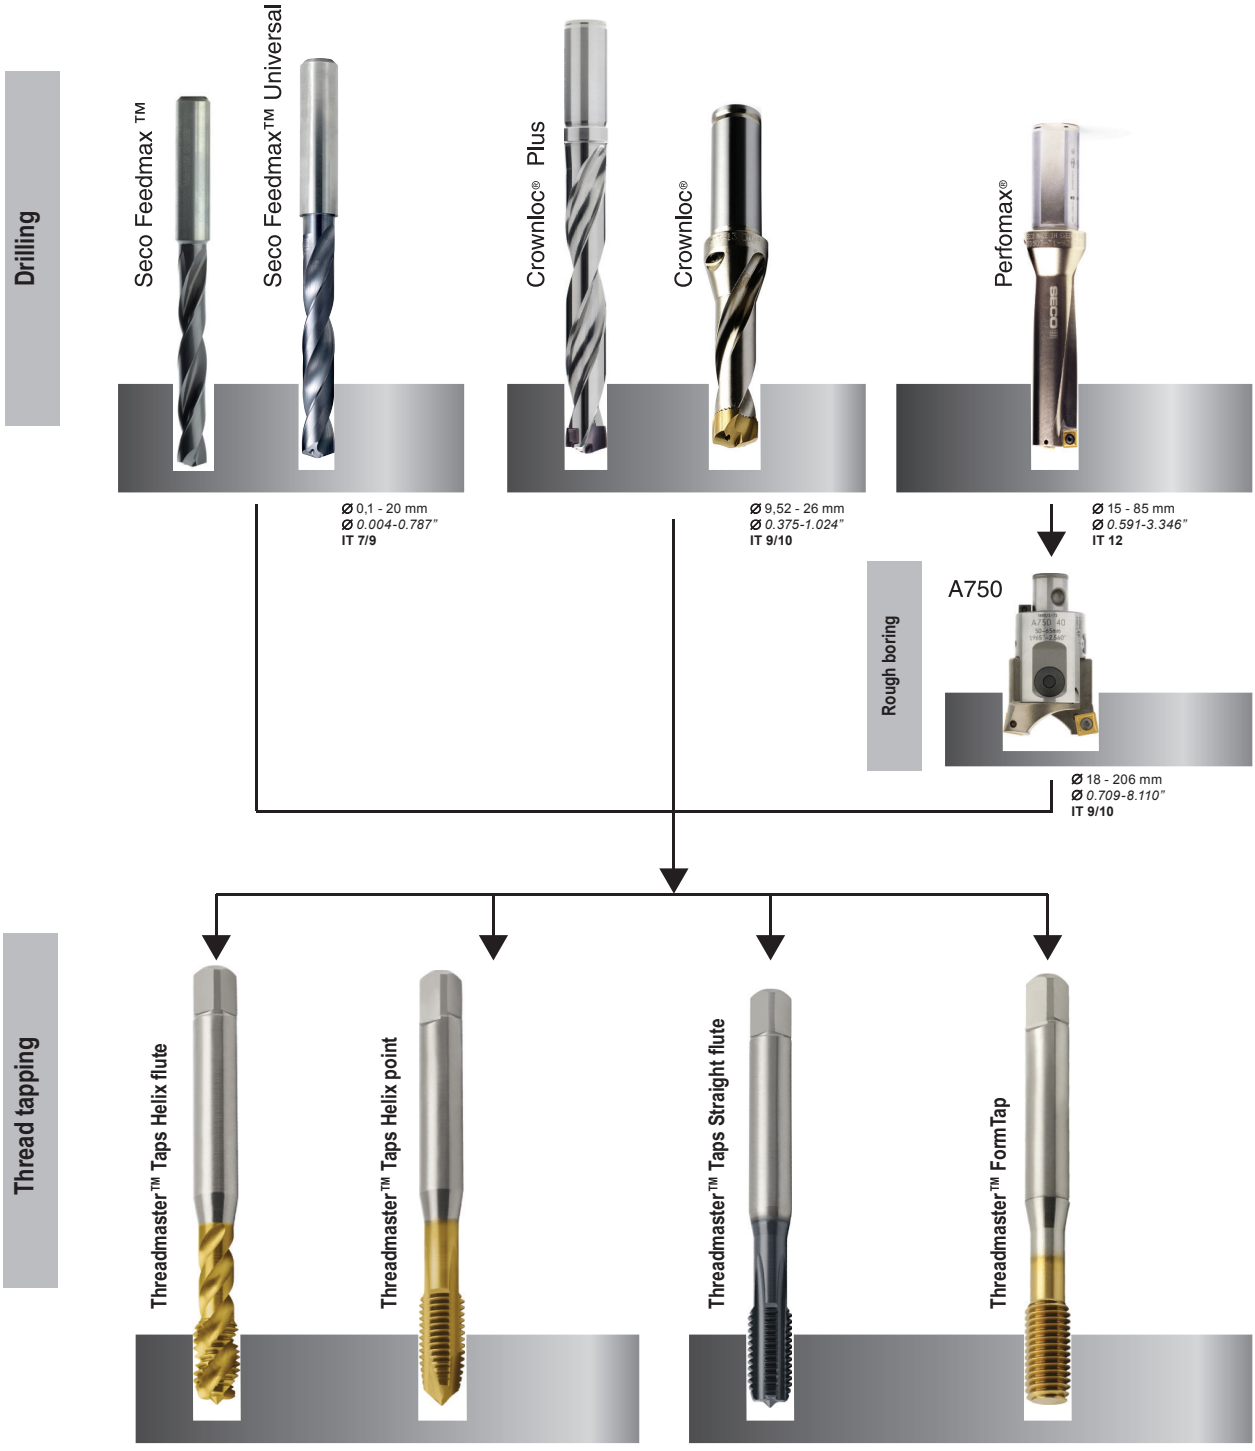


Hole size



Dimension of the hole differs between cutting and forming the thread.

D = Hole diameter
TD = Major thread diameter
PTH = Thread pitch

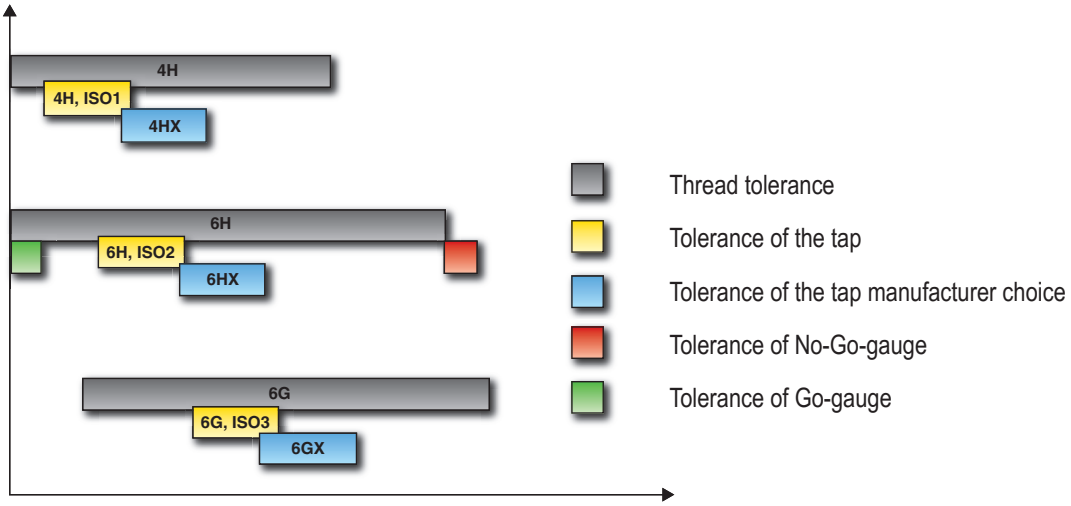


Cutting tap
D = TD-PTH

Forming tap
D = TD-PTH/2
($D = D_{nom}$ - 0.0068 x PTH x 65)

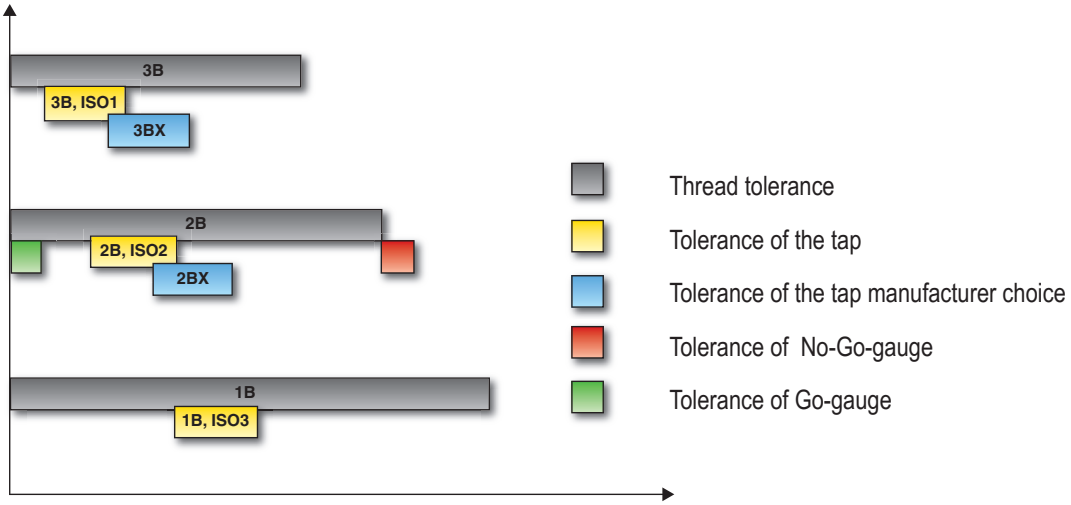
Introduction to taps – Tool guide

Taps – Choice of Tap tolerance



The Threadmaster™ Taps from Seco are available for threads with different tolerences 6H and 6G, as well in 6HX and 6GX.

Normal standard tolerance is H.



Tolerance GX/HX and BX is to be used when risk of oversize is limited, this also increases tool life of the tap.

Taps for UNC/UNF are designed for tolerance 2B.

Tolerance class for G and NPT/NPTF is normal.

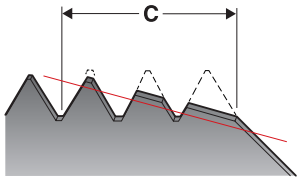
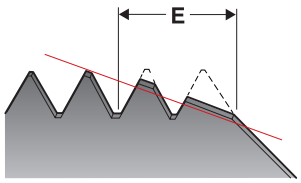
Taps – Entering chamfer THCHT



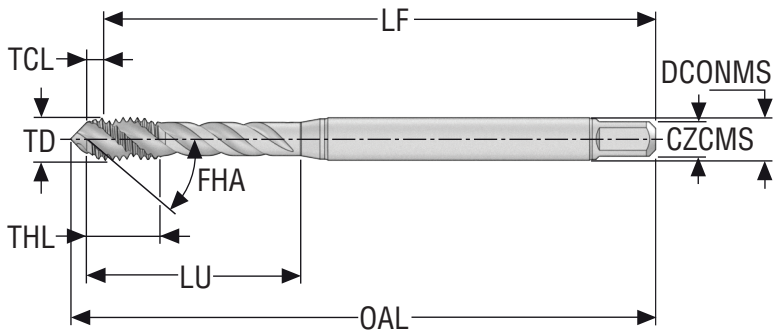
B-type

Length 3.5 – 5 threads
Low load
Best surface finish
Thin chip thickness
Low pressure at the chamfer
Long tool life
Most common for through holes (Helix point)



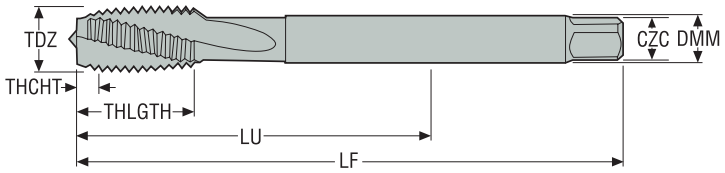
C-type

Length 2 - 3 threads
Medium load
Good surface finish
Normal chip thickness
Normal pressure at the chamfer
Normal tool life
Most common design
Standard for blind holes
Most common for blind holes (Helix flute)



E-type

Length 1.5 – 2 threads
High load
Good surface finish
Thick chip thickness
High pressure at the chamfer
Shorter tool life
When limited space in the bottom of a hole



Definitions for T32, T33 and T34

Definitions Seco Threadmaster™	
BSG	= Basic standard group
TD	= Thread diameter
TDZ	= Thread diameter size
THCHT	= Threading chamfer type
TCL	= Thread chamfer length
THL	= Thread length
LU	= Usable length
LF	= Functional length
OAL	= Overall length
FHA	= Flute Helix angle
DCONS	= Connection diameter machine side
CZCMS	= Connection size code machine side
NOF	= Flute count
PHDR	= Recommended premachined hole diameter
PHDX	= Maximum premachined hole diameter
TCTR	= Thread tolerance class
TPI	= Threads per inch
ULDR	= Usable length diameter ratio

Definitions for -P, -M, -K, -N, -S, -V and MF

Definitions Seco Threadmaster™	
BSG	= Basic standard group
CZC	= Connection size code
DMM	= Shank diameter
FHA	= Flute helix angle
LF	= Functional length
LU	= Usable length
NOF	= Number of flutes
PHDR	= Recommended premachined hole diameter
PHDX	= Maximum premachined hole diameter
TCTR	= Thread tolerance class
TD	= Thread diameter
TDZ	= Thread diameter size
THCHT	= Thread chamfer type
THFT	= Thread form type ISO, Withworth, UN...
THLGTH	= Thread length
TPIX	= Threads per inch maximum
TTP	= Thread type internal/external/both
TPX	= Thread pitch maximum
ULDR	= Usable length diameter ratio

Taps - Choice of toolholder

The tool holder choice is made according to the machine spindle, with or without synchronization.

Modern CNC machine with synchronization:

The modern CNC machines can synchronize the spindle feed rate and rotation in order to make a rigid tapping operation. The TCER – tapping chucks with micro-compensation is the most suitable for synchronized tapping.

TCER Tapping chucks with micro-compensation, for synchronized tapping:

TCER for synchronized tapping has a micro-compensation system to avoid the small discrepancies and axial forces during rigid tapping machining. The taps are mounted in specific ER collets with square drive.

Note: These ER collets with square drive can also be mounted in ER collet chucks, but then without micro-compensation.

TCER

Troubleshooting

Oversized thread

Wrong tap for application
- Refer to application charts

Incorrect axial feed
- Ensure feed rate is controlled
- If possible, use tool holder for syncronized tapping

Wrong cutting speed
- Refer to recommendations

Wrong tolerance
- Choose tap with lower tolerance

Undersized thread

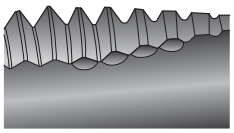
Tap worn out
- Replace tap

Tap drill hole too small
- Check drilling recommendations

Material closing after tapping
- Increase drill diameter

Wrong tolerance on tap
- Choose tap with higher tolerance

Chipping



Wrong tap for the application
- Check for tool selection

Incorrect or lack of lubricant
- Use appropriate emulsion or oil

Tap hitting bottom of hole
- Increase drill depth or reduce thread depth

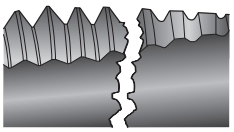
Trapped chip
- Check tool selection

Surface hardening in drilled hole
- Check drilling recommendations

Breakage

Too high torque
- Use tap holder with torque settings

Tap worn out
- Replace tap



Incorrect or lack of lubricant
- Use appropriate emulsion or oil

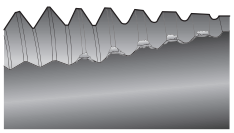
Tap hitting bottom of hole
- Increase drill depth or reduce thread depth

Wrong cutting speed
- Refer to recommendations

“Birdnest” around tool
- Check tool selection

Tap drill hole too small
- Check drilling recommendations

Rapid wear



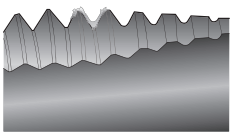
Wrong type of tap for application
- Refer to tap choice

Incorrect or lack of lubricant
- Use appropriate emulsion or oil

Too high cutting speed
- Refer to recommendations

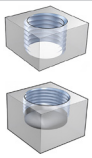
Work (surface) hardening in drilled hole
- Check drilling recommendations
- Drill worn out

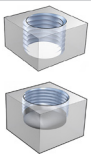
Tap drill hole too small
- Check drilling recommendations



Built-up edge

Incorrect or lack of lubricant
- Use appropriate emulsion or oil





Tap worn out
- Replace tap

Wrong cutting speed
- Refer to recommendations

Wrong type of tap for application
- Refer to tap choice

SMG = Seco material group, v_c = m/min (*sf/min*)

Cutting speeds (v_c) in the table are recommendations for a start value and calculated when running in 2xD, except for V048, V050 and MTH-S (001, 002, 003, 004, 011, 012, 031, 032, 041, 042 and 044) that are calculated from 1,5xD.

When running in 1,5xD increse speed by 20% and at 2,5 x D reduce speed by 20%. At 3 x D reduce by 30%. Due to machine, material and setup condition it is advisable also to optimize cutting data.

Recommended ranges to use for each type of tap: K001-K002: +25% / -25%, V015-V016: +15% / -15%, V001-V045: +15% / -15%, V048-V050: +35% / -35%, V053-V063: +15% / -15%

SMG = Seco material group, v_c = m/min (*sf/min*)

Cutting speeds (v_c) in the table are recommendations for a start value and calculated when running in 2xD, except for V048, V050 and MTH-S (001, 002, 003, 004, 011, 012, 031, 032, 041, 042 and 044) that are calculated from 1,5xD. When running in 1,5xD increse speed by 20% and at 2,5 x D reduce speed by 20%. At 3 x D reduce by 30%. Due to machine, material and setup condition it is advisable also to optimize cutting data.

Recommended ranges to use for each type of tap: K001-K002: +25% / -25%, V015-V016: +15% / -15%, V001-V045: +15% / -15%, V048-V050: +35% / -35%, V053-V063: +15% / -15%

SMG = Seco material group, v_c = m/min (*sf/min*)

Cutting speeds (v_c) in the table are recommendations for a start value and calculated when running in 2xD, except for V048, V050 and MTH-S (001, 002, 003, 004, 011, 012, 031, 032, 041, 042 and 044) that are calculated from 1,5xD.

When running in 1,5xD increse speed by 20% and at 2,5 x D reduce speed by 20%. At 3 x D reduce by 30%. Due to machine, material and setup condition it is advisable also to optimize cutting data.

Recommended ranges to use for each type of tap: K001-K002: +25% / -25%, V015-V016: +15% / -15%, V001-V045: +15% / -15%, V048-V050: +35% / -35%, V053-V063: +15% / -15%

Cemented carbide inserts and insert carriers

Cemented carbide inserts and cemented carbide insert carriers from Seco Tools are not included in the product range intended for the following requirements.
Nevertheless Seco Tools can make the following declaration.
These products meet all requirements in RoHS (Restriction of the use of certain Hazardous Substances in electrical and electronic equipment), WEEE (Waste Electrical & Electronic Equipment) and ELV (End of Life Vehicles) requirements.
Products do not contain mercury, lead, hexavalent chromium, cadmium, CFC, HCFC, flame retardants or solvents in concentrations that exceed specifications in the regulations.

Regrinding:
Wet or dry grinding can produce potentially hazardous dusts or mists that can irritate skin, eyes, nose, throat and result in lung damage or disease. To avoid injury use proper safety precautions and protective equipment.

Disposal:
Seco Tools will buy back used inserts and solid carbide tools for recycling. Inserts and solid carbide tools should be separated from other metal waste (steel, aluminium, copper etc).
All packing material is fully recyclable.

CBN and PCD inserts

Inserts from Seco Tools are not included in the product range intended for the following requirements. Nevertheless Seco Tools can make the following declaration.
This product meets all requirements in RoHS (Restriction of the use of certain Hazardous Substances in electrical and electronic equipment), WEEE (Waste Electrical & Electronic Equipment) and ELV (End of Life Vehicles) requirements.
Products do not contain mercury, lead, hexavalent chromium, cadmium, CFC, HCFC, flame retardants or solvents in concentrations that exceed specifications in the regulations.

Regrinding:
Wet or dry grinding can produce potentially hazardous dusts or mists that can irritate skin, eyes, nose, throat and result in lung damage or disease. To avoid injury use proper safety precautions and protective equipment.

Disposal:
Seco Tools will buy back used CBN- or PCD-tipped inserts for recycling. Inserts should be separated from other metal waste (steel, aluminium, copper etc). Solid CBN-inserts may be discarded as landfill waste.
All packing material is fully recyclable.

Black oxide insert carriers

Insert carriers from Seco Tools are not included in the product range intended for the following requirements. Nevertheless Seco Tools can make the following declaration.
This product meets all requirements in RoHS (Restriction of the use of certain Hazardous Substances in electrical and electronic equipment), WEEE (Waste Electrical & Electronic Equipment) and ELV (End of Life Vehicles) requirements.
Products do not contain mercury, lead, hexavalent chromium, cadmium, CFC, HCFC, flame retardants or solvents in concentrations that exceed specifications in the regulations.

Disposal:
Used insert carriers may be sent for recycling together with ordinary steel waste (swarf and discarded steel scrap) for recycling.
All packing material is fully recyclable.

Cermet inserts

Inserts from Seco Tools are not included in the product range intended for the following requirements. Nevertheless Seco Tools can make the following declaration.
This product meets all requirements in RoHS (Restriction of the use of certain Hazardous Substances in electrical and electronic equipment), WEEE (Waste Electrical & Electronic Equipment) and ELV (End of Life Vehicles) requirements.
Cermet grade C15M inserts do contain nickel and will leach nickel when in contact with the skin. Amount of leaching is higher than specified in norm SS-EN 1811 Reference test method for release of nickel from products intended to come into direct and prolonged contact with the skin. These norms are intended for products that are in direct and prolonged contact with the skin and are therefore not directly applicable for cermet inserts. Persons with known allergic reactions to nickel are advised to wear protective gloves when handling cermet inserts.

Regrinding:
Wet or dry grinding can produce potentially hazardous dusts or mists that can irritate skin, eyes, nose, throat and result in lung damage or disease. To avoid injury use proper safety precautions and protective equipment.

Disposal:
Used inserts may be recycled. Inserts should be separated from other metal waste (steel, aluminium, copper, etc) including cemented carbide inserts.
All packing material is fully recyclable.

Nickel coated insert carriers

Insert carriers from Seco Tools are not included in the product range intended for the following requirements. Nevertheless Seco Tools can make the following declaration.
This product meets all requirements in RoHS (Restriction of the use of certain Hazardous Substances in electrical and electronic equipment), WEEE (Waste Electrical & Electronic Equipment) and ELV (End of Life Vehicles) requirements.
Products do not contain mercury, lead, hexavalent chromium, cadmium, CFC, HCFC, flame retardants or solvents in concentrations that exceed specifications in the regulations.
Insert carriers do contain nickel and will leach nickel when in contact with the skin. Amount of leaching is not higher then norm SS-EN 1811 Reference test method for release of nickel from products intended to come into direct and prolonged contact with the skin.
These norms are intended for products that are in direct and prolonged contact with the skin and are therefore not directly applicable for insert carriers.
Persons with known allergic reactions to nickel are advised to wear protective gloves when handling nickel coated insert carriers.

Disposal:
Used tools maybe sent for recycling together with ordinary steel waste (swarf and discarded steel scrap) for recycling.
All packing material is fully recyclable.

Seco

Catalog & technical guide 2024.1

Solid End Mills

At Seco, we make tools, tech, and solutions for the most advanced manufacturing challenges on Earth. From our founding in Fagersta Sweden, to today's global company, our business has always been made to measure, and built on trust.

Combining cutting-edge, precision tools with lasting, personal partnerships, we're a true people company helping our partners discover the future of the manufacturing industry.

We're proud to make for makers, invent for inventors, and partner with pioneers. Driving the future forward with our focus on innovation. In short - if the right tool for the job exists, we'll deliver it. If it doesn't, we'll create it.

We're proud to put sustainability at the heart of everything we do, challenging perceptions of our industry, changing the process of manufacturing, and playing our own small part in shaping a brighter looking future.

Made for Makers

WELCOME TO SECO SOLID MILLING

JABRO was founded in 1976 in Lottum, Netherlands.
JABRO is Seco's competence centre for solid milling solutions, and has the global responsibility for Research & Development, Manufacturing and Application Engineering.

Seco JABRO´s products provide the world market with a wide range of standard tools and custom tool solutions, including reconditioning, mainly for General Engineering, Aerospace, Energy, Medical and Mould & Die customers.

Advanced manufacturing technology and an environmental focus, ensures Seco's sustainable development and production of products that successfully respond to market demands in milling operations for both ferrous and non-ferrous materials.

- General Engineering
- Mould & Die
- Aerospace
- Medical
- Power energy
- 3C segment (Computer Customer Electronics and Communications)

Product family overview

SOLID²

Jabro-Solid² is a range of solid carbide end mills for applications in general machining, offering flexibility, speed and cost efficiency. Jabro-Solid² is available in a diameter range of ∅1-∅32 mm and in *inch* ∅1/32 - 1 1/4.
Jabro-Solid² also includes a group of dedicated advanced roughing tools (JS564 and JS565).
The 564 and 565 offer excellent performance when applied in well defined tool paths with constant arc of contact with high cutting speed and high cutting depth applications (advanced roughing).
For the complete range of JS500 series tools all chamfer (c*45°) have the following tolerances: c = DC</=3=+0,01, 3<DC</=6=+0,02, 6<DC</=10=+0,03,
10<DC</=14=+0,04, 14<DC</=18=+0,05, 18<DC</=24=+0,06,
All Jabro-Solid² product codes begin with JS.
Please see page 9 for a grouped overview of JS² products.

HSM/TORNADO

These tools are characterized by high precision tolerances, short cutting lengths, reduced necks and significant core diameters, maximizing rigidity. These tools have been developed to excel in peripheral milling and copy milling machining methods.
Please see page 9 for a grouped overview of HSM/TORNADO (high speed machining) products.

HPM

Optimized endmills are dedicated for original equipment manufacturers and first-tier suppliers where large batches of a single component have to be machined and where processes need to be fully optimized to reduce cycle times, reducing costs per part.
Please see page 10 for a grouped overview of HPM (high performance machining) products.

HFM

High feed machining is the first choice for applications with deep and shallow workpiece features, 3D profiling for mold & die applications and machining in unstable conditions. High feed tools excel in plunge milling machine methods.
Please see page 10 for a grouped overview of HFM (high feed machining) products.

Product family overview

MINI

Seco's range of micro solid carbide end mills consists of square end mills and ballnose cutters with small cutting diameters. Universal tools are applicable for common workpiece materials and specific tools are dedicated for graphite and hardened-steel applications. All tools have a thin layered coating for optimal performance in small-sized applications.
Please see page 10 for a grouped overview of MINI (micro machining) products.

DIAMOND

Available in a variety of geometries and an extensive diameter range, these tools feature the best possible substrate to ensure the perfect adhesion of the diamond coating across a range of cutting parameters. Overall, these end mills significantly increase productivity and lower tooling costs by requiring fewer tool changes and being able to produce precision parts at high feed rates.
Please see page 10 for a grouped overview of DIAMOND (diamond coated) products.

COMPOSITE

It consists of diamond-coated and uncoated solid carbide and PCD end mills incorporating different geometries as well as with PCD-brazed cutting edges. This is a product range offering optimized tools for difficult cutting conditions on challenging workpiece materials.
Please see page 10 for a grouped overview of COMPOSITE (JC) products.

VHM

Includes universal coated and uncoated endmills, a range of products dedicated for machining plastics and aluminum, chamfer end mills and conical tools. These products consist of high-quality grades and coatings for predictable and premium tool life.
Please see page 11, 12 for a grouped overview of VHM (general engineering) products.

Product family overview

CERAMIC

To cut the world's toughest heat-resistant superalloys (HRSAs) quickly, you need a tool just as strong and advanced as the materials themselves. Streamline your processes and cut your HRSA parts considerably faster with these high-performance ceramic solid end mills.
Please see page 11, 12 for a grouped overview of CERAMIC products.

HSS-CO

High speed steel cobalt is a premium grade that offers higher performance compared to traditional high speed steels. Due to increased hardness, these end mills last longer in today's abrasive, heat resistant and exotic materials.
The high-quality, low-cost production advantages of these end mills are a direct result of engineered flute designs, wear resistant coatings and optimized features like internal coolant channels for these challenging materials.
Please see page 11, 12 for a grouped overview of HSS-CO products.

X-Heads

With the Seco exchangeable head milling system, quickly and easily change between various solid carbide milling head profiles and types to optimize all your milling operations while you reduce manufacturing costs and tooling inventories. X-Heads end mills mount to a variety of available shank lengths for even greater versatility, with long-reach capability. End mill changes only require a simple turn of a wrench, and the shank could remain in the machine. Eliminate the need to reset tool lengths thanks to a secure and reliable connection that provides exchange accuracies within 50 microns.
Please see page 487 for a grouped overview of X-heads (exchangeable heads) products.

BLANK = Standard (catalogue) product R = Reconditioned product (complete) RK = Reconditioned product (frontal)	J = JABRO® VHM JC = JABRO® Composites JD = JABRO® Diamond JH = JABRO® HSM/Tornado JHF = JABRO® HFM JHP = JABRO® HPM JM = JABRO® Mini JS = JABRO® SOLID²	JPD = JABRO® PCD JCO = JABRO® HSS-Co JCG = JABRO® Ceramic XS* = X-Head SOLID² XH* = X-Head HSM/Tornado XV* = X-Head VHM XHF = X-Head HFM	A three-digit combination specifying the cutting geometry. Example: 111, 950, 553, 514, etc.

4. Connection size	5. Cutting diameter
This figure indicates the threading connection size between the head and adaptor E10 = 10 mm E12 = 12 mm E16 = 16 mm E20 = 20 mm E25 = 25 mm	Metric = 3 digit code (in case of 4 digit code – xx,xx mm) Imperial = a dot followed by a 3 digit code Example: (050 = metric, 5 mm) / (.500 = imperial, ½ inch)

6. Tool shape

(DC = DMM)		(DC < DMM)			(DC > DMM)
					
D	E	F	G	J	P

Form shape

		
N	X	T

7. Length of shape

A single digit that gives an indication of the length of the cutter compared to other products with the same cutting geometry.

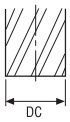
9. Type of shank

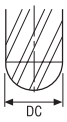
.0 = Cylindrical
.3 = Weldon
.5 = Whistle Notch
.9 = Safe-Lock

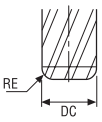
10. Number of flutes

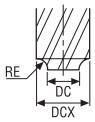
This figure indicates the number of flutes in the cutter.
Example: PCEDC2= 2 flutes, PCEDC6 = 6 flutes

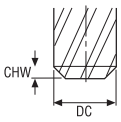
11. Coolant channels

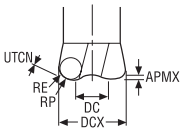












BLANK = No coolant channels
A = Internal coolant channel(s)
C = Chip splitters

12. Grades

4 character code specifying the coating on the cutter.

MEGA =	MEGA	DURA =	DURA
MT =	MEGA-T	NXT =	NXT
M64 =	MEGA-64	HXT =	HXT
M64 T=	MEGA-64-T	STAX =	STAX
SIRA =	SIRON-A	TAN =	TAN
HEMI =	HEMI	M9 =	M9
DIA =	DIAMOND	AXT =	AXT

8. Tip shape

Sharp	Ball-nose	Corner radius	Concave radius	Chamfer	High feed
					
S	**B**	**R...**	**K...**	**C**	**H**

Size of radius for convex and concave radius tipped products

000 = For metric products the tip shape is shown by a three-digit figure.
By dividing this figure by 100 you will get the actual corner radius size in millimetres.

.000 = For imperial products the tip shape is shown by a dot, followed by a three-digit figure.
This figure actually shows the size of the corner radius in *inch* (e.g. R.100 would indicate a radius of 0.100 *inch*).

4. Tool shape		
(DC = DMM)	(DC < DMM)	
		
E	G	J

5. Length of shape	6. Overall length
A single digit that gives an indication of the length of the cutter compared to other products with the same cutting geometry.	Metric = 3 digit code Imperial = 3 digit code with a dot after the first digit Example: (055 = metric, 55 mm) / (2.50 = imperial, 2 1/2 inch)

7. Taper angle	8. Type of shank	9. Type of material
Indicates the body half taper angle. Example: (00 = 0°;0°; 05 = 5°; 10 = 10°)	.0 = Cylindrical .3 = Weldon .5 = Whistle Notch .9 = Safe-Lock	Indicates the different shank materials that are available. S = Steel DM = Densimet E = Solid Carbide

How our solutions can benefit you

The individual solution - Custom and modified tools

If the requirements are very special, we have the right solution with our individual and customized tools - solutions that have been tailored specifically to your individual requirements. This will enable you to take your machining productivity to a whole new level.
In addition to the standard solutions, our offer includes:

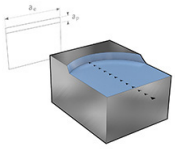
Custom tools
They are modified geometries or form shaped tools for customer specific demands as we can fully cooperate with the customer and design a specific tool which answers the needs. Examples can be:

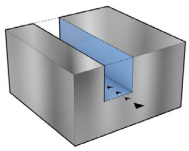
- Modified tools within a standard geometry
- MEP (Mechanised edge Profiling)
- Firtree,
- Dovetail
- Tapered ballnose
- Condyle cutter
- Form shaped tools
- Barrel

Modified tools
Seco offers a quick delivery solution for standard tools requiring modification to meet specific dimensional requirements as this can be:

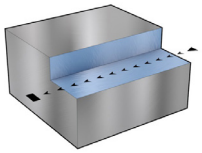
- (full) Radius/Facet/Chamfer/Concave
- OD reduction (neck reduction), including increased length
- Coating (application for uncoated tools)
- Reduced cutting diameter
- Chip breakers
- Adding Weldon / Safelock
- External coolant channels

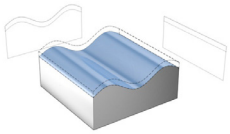
Reconditioning cuts cost and tools inventory





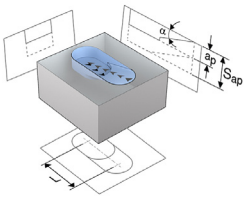
Seco's modern carbide tools offer remarkable performance by utilizing the best combinations of carbide substrates with highly wear resistant coatings, optimized cutting geometry and controlled edge preparation.

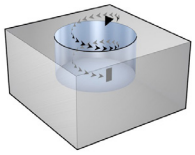




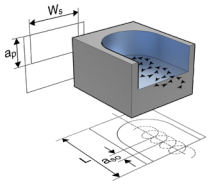
However good a tool is, as part of its function, it will eventually show signs of wear on the cutting edge. Controlling this wear and the timely replacement of the tool will allow the used tool to be reconditioned, thus reducing tool investment costs. And we use the same advanced technology to recondition your solid carbide tools as we use to manufacture new products.

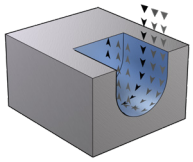
Your benefits from reconditioning



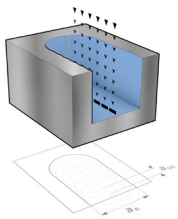


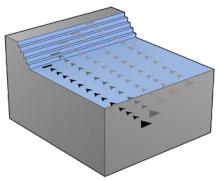
- Manufactured to Seco´s high standards with the original Seco geometry, edge preparation and coating processes.
- Savings on tooling costs by repeated use of the same solid carbide tool.
- Our easy to use and free 'reconditioning box' includes a pre-prepared delivery note.
- Free, reliable collection on the following day when you call your Seco contact for pick up.
- An easy process due to the package service, reconditioning box and prepared delivery note.
- Delivery via the normal Seco channels.
- Safe transportation and storage of the reconditioned tools by packaging them in similar packaging as new tools.
- A new packaging label is included.
- Work towards greener and cleaner environment. -Seco´s processes are globally certified with ISO14001.
- Guaranteed quality, as all processes are ISO9001 certified.



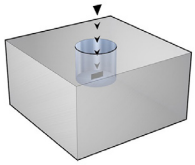


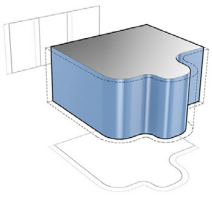
Basic operations:





Face milling:	Slot milling:
Operation where the tool is in engagement with less than 180° arc of contact. Tool engagement: Small a_p and large a_e. 	Operation where the full diameter is in engagement, a_e is equal to DC and a_p up to 2 times DC depending on the machining strategy in use. 





Side milling:	Copy milling:
Operation where the side of the tool is in engagement, a_p is large and a_e is small. 	Operation where the radius is in engagement. a_p and a_e are both small. 

Advanced machining methods:

Ramping:	Helical interpolation ramping:
Opening up a pocket by making a Z axis at an angle. 	Opening a pocket by making a circular movement with the tool while ramping in Z axis. 

Trochoidal:	Push-pull:
Opening a slot by using side milling, making a partial circular movement in X- or Y-axis. (changing slot milling into side milling). 	Machining a 3D form by making a down and up copying movement following the profile of the form. 

Plunge milling:	Z-leveling:
Opening up a deep slot by using drilling (Z) axis. 	Machining a surface by making a small drilling or ramping in Z axis then opening the pocket with X and Y movements. 

Drilling:	Advanced roughing/ Optirough
Making a hole with movement in Z axis. 	Well defined tool paths with constant arc of contact for reliable roughing of simple & complex shapes. The large axial depths (a_p) & small radial depths (a_e) of cut combined with high feeds per tooth (f_z) and cutting speeds (V_c) results in high productivity. 

Definitions, machining strategies:

General machining:
A machining strategy for general use. a_e - a_p ratio can vary depending on the operation.
Tool characteristics: Tools have relatively long cutting lengths and thin core diameters.
There are no high requirements on the tolerances.
Machine requirements: There are no special machine requirements needed.
With basic CNC technology, difficult advanced machining methods are not possible.
Average results will be reached on metal removal rate Q (cm^3/min).
The application area usually includes small batch sizes and a wide range of materials.

High Performance Machining:
Is a machining strategy where very high metal removal rates can be achieved. Typical for this strategy is that a_e is 1 times DC and a_p is 1 to 1½ times DC depending the workpiece material.
With HPM (High Performance Machining) you achieve an extremely high metal removal rate by using a much higher chip load than in general machining.
Tool characteristics: Specially developed chip formers in the flute of the tool, tip protection with a small 45° face or corner radius, special smooth formed chip space and coating, with or without Weldon shank.
Machine requirements: High stability, high power requirements, CNC control, rigid clamping system.
The application areas are: Operations in a mass production environment where production time/lead time is of great importance or on single products where a high metal removal rate Q (cm^3/min.) is required.

High Feed Machining:
Is a machining strategy where high feed rates can be reached with large radial engagements (a_e) in combination with a small a_p.
With HFM (High Feed Machining) you achieve high metal removal rates and/or surface finish by using a much higher table feed compared to general machining.
Tool characteristics: Specially developed front teeth, very short cutting length and coating.

Machine requirements: Good stabillity, CNC, possibility for high table feed (v_f).
The big advantage of this technology is that it is very user friendly, easy, safe and quick to program in CAM. By using the so called Z-leveling strategy it is relatively easy to program complex forms without the necessity of having extensive experience in programming.
The application area is: From soft to hardened steel, titanium and stainless steel and it is very good as a pre operation before HSM is used.
It can also be applied in deep pocket machining.

Micro machining:
Is a machining strategy where extremely small tool diameters are used.
Tool characteristics: Diameter range Ø 0,1 to 2,0 mm, small cutting lengths, a wide range of OD reductions, high accuracy, coating.

Machine requirements: High spindle accuracy, high RPM, CNC, thermal stability against spindle growth.
Application area is: Production of cavities like slots, pockets, holes or engravings in many types of material.

High speed machining:
Is a machining strategy where a combination of a small radial depth of cut and high cutting speed and table feeds are used.
Depending on the method a high metal removal and a low R_a value can be reached.
Typical for this strategy are the low cutting forces, less heat build up in tool and workpiece, less burr formation and high dimensional accuracy on the workpiece.

With HSM (High Speed Machining) you achieve high metal removal rate and/or surface finish by using a much higher cutting speed compared to general machining.
Tool characteristics: Stable, (thick core diameter and a short cutting length) clear and well formed chip space for good chip evacuation, coating.

Machine requirements: Quick CNC control, high RPM, quick transmission to the axis.
The applications area is: Mould & Die industry on pre-finishing and finishing operations in hardened steel (48-62 HRc) in a short lead time.
This technique can also be applied in most other materials when using the right tool and advanced machining method.

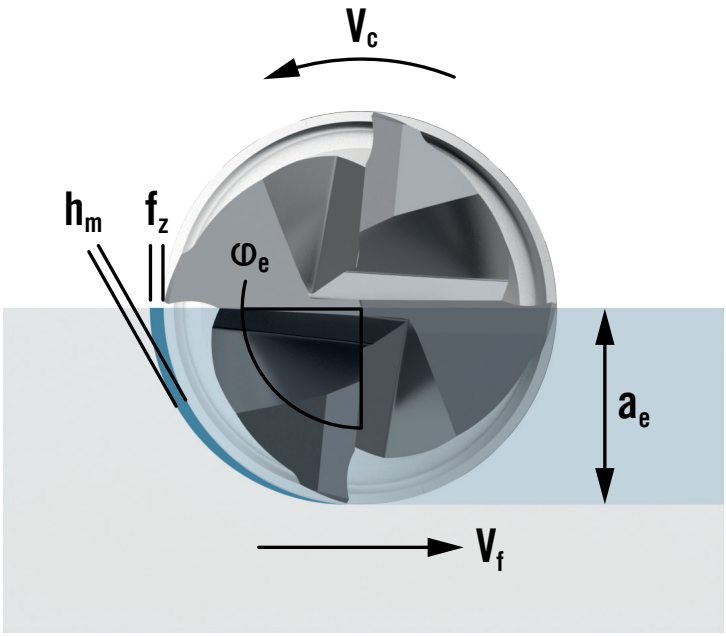
Advanced roughing / Optirough:
Well defined tool paths with constant arc of contact for reliable roughing of simple & complex shapes. The large axial depths (ap) & small radial depths (ae) of cut combined with high feeds per tooth (fz) and cutting speeds (Vc) results in high productivity.

These CAM-based rough-machining, or dynamic milling, strategies are ones that centre on a cutting tool's arc of contact and its average chip load.

When reducing the arc of contact, the amount of heat generated during roughing operations is reduced. As the radial depth of cut decreases, so does a cutter's arc of contact. A smaller amount of contact results in less friction and, therefore, less heat between the tool's cutting edges and the workpiece it is machining. These lower machining temperatures, in turn, allow for increased cutting speeds shorter cycle times.

Explanation of Advanced Roughing

Advanced Roughing, what does it mean?



Today's CAM packages offer toolpath strategies specifically for inside/outside radii shapes where changing arcs of contact are common when using conventional tool-paths. These software packages automatically apply different feeds to control arc of contact and keep chip loads consistent.

These CAM-based rough-machining, or advanced roughing, focus on a cutting tool's arc of contact and its average chip load. When reducing the arc of contact, the amount of heat generated during roughing operations is reduced. As the radial depth of cut decreases, so does a cutter's arc of contact. A smaller amount of contact results in less friction and, therefore, less heat between the tool's cutting edges and the workpiece it is machining. These lower machining temperatures, in turn, allow for increased cutting speeds shorter cycle times. Also, the resulting cutting force is lower, allowing high APMXS, or cutting depth to be programmed.

In advanced roughing, to maintain arc of contact, CAM packages need to employ trochoidal machining-like techniques when entering a radius.

When using an optimized roughing toolpath and maintaining consistent arc of contact, the cutter's radius can match that of the inside radius being cut without risk of cutter overload. This capability allows our Advanced Roughing tools (JS554-3C, JS564, JS565, JS754, JS755 and JS720) to remove more stock in the roughing pass, thus reducing the amount of stock the finish pass has to cut – all of which translates to faster machining cycle times and longer tool life. Also, while the remaining stock is constant the finishing tool can generate a better final surface quality and at the same time will have longer tool life.

Impact of arc of contact on cutting speed and feed per tooth

How our products can benefit you

Achieve Revolutionary speeds in superalloys with JABRO® Ceramic end mills

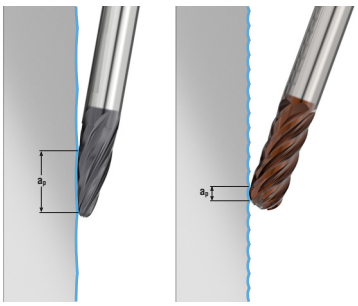
SiAlON ceramics, high-strength geometries and reinforced frontal teeth are some of the main features of these highly optimized tools and allow full utilization of high speed, high-performance machine tools. The tools can operate at cutting speeds of up to 1200M/min and can offer a significant productivity increase when compared to standard solid carbide solutions.

Since high temperatures are needed, also a significant amount of RPM is needed in order to achieve the high vc. The high temperatures are required in order to reach a level where the HRSA softens (850c +). With these tools, multiple strategies can be applied as long as a constant cut and constant contact with the workpiece is maximized.

The tool is designed for side milling, slot milling, high-feed milling and advanced roughing! All these are possible. To maintain the high cutting temperature in the cutting zone, coolant is compressed air. Because the tool operates at high speeds, also run out is of high importance.

You can find JABRO®Ceramic tools on page 294.

Simplify aerospace hybrid materials holemaking with two-in-one-geometry



The JC899 has a patented two-in-one double geometry solution, designed for machining hybrid stacked material combinations such as CFRP-Ti and CFRP-Alu. Due to its left-hand helix, right-hand cut design, this tool is preventing delamination, fiber pull-out and chip marks from damaging the workpiece surface (this as chips will be pushed downwards out of the hole). As a result, the JC899 left-hand helix, right-hand cut STAX finisher gives a perfect surface finish and prevents chip pollution between the 2 stack layers.

This means post-machining, unstacking, cleaning and deburring, and re-stacking is not needed anymore which can can boost process efficiency by as much as 200 to 300 percent and provide tool life three to six times longer than that of conventional reamers.
At the same time the drilling process is replaced by applying the JC898 high feed rougher. This tool helical interpolates and allows the JC899 to operate in continuous stock conditions, maximizing quality output while minimizing corellation in hole size and tolerance.

You can find JABRO® JC898/JC899 on pages 454 - 456.

Take bigger stepovers for faster finishing productivity

For the fastest, most reliable finishing operations, new barrel-shaped tools use an innovative “taper” or “drop” geometry to enable large increases in stepover. This is possible through the use of advanced CAD/CAM systems or new plugins built for the uses of these tools. Using 5-axis machine movement, the tool’s cutting profile can remain engaged with the surface of the part at the proper angle at all times.
In addition to our standard barrel-style shapes, Seco can also offer all styles of barrel geometry’s as custom products, such as lens shapes, ensuring you always have access to the ideal tools for your part-production needs.

Take the risk out of micro milling operations

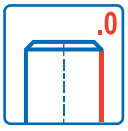
Achieve accuracy, precision and high surface finish quality from the very start when machining small, micro-sized surfaces with our range of solid-carbide JABRO® end mills. SECO's new Mini ranges deliver longer tool life, stability and peace of mind for machining operations where it is typically impossible to actually see the workpiece and cutting tool as it works.

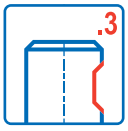
Precisely produced geometries, virtually zero runout, advanced coatings and true line-form radius tolerances give these mini ranges its incredibly long tool life and reliability. Key is to apply these tools in suitable conditions, in which the benifits can be maximized. Minimize run-out of the tool plus the tool holder is essential.
Also the CAM program can be optimized with the SECO JABRO® feed optimizer which calculates the ideal RPM and feed speed (vf) for every applicaton. As a result, the tool and set-up help to eliminate any unforeseen problems during rough, pre-finish and final finish micro milling operations.

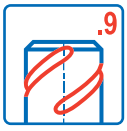
You can find an overview of JABRO®Mini tools on page 10.

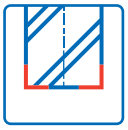
JS522 long flute finisher

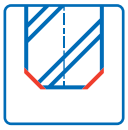
The JS522 long-flute finishing tool is capable of meeting the aerospace industry's stringent criteria for perpendicularity, fine surface finish, high metal removal rates and more effective machining.

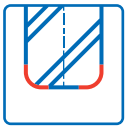


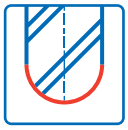


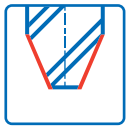


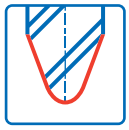


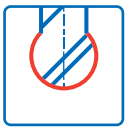


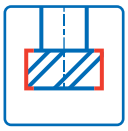


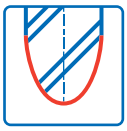




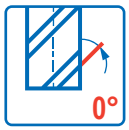


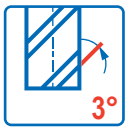


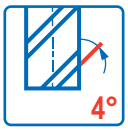


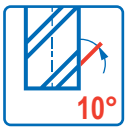


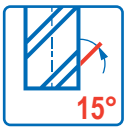
With a cutting length of 5*Dc, an increased core diameter and a slightly negative taper to compensate deflection, the JS522 is specially designed to machine high shoulders in single-pass finishing operations. This single pass saves time (up to 80%) but most important, also delivers instant quality. This tool is often used in mass production areas.

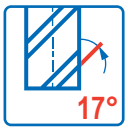


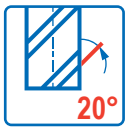


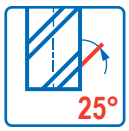


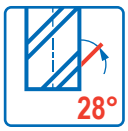


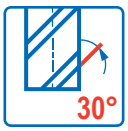


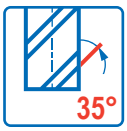


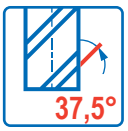


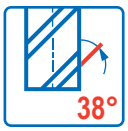


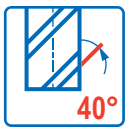


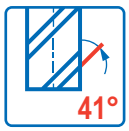


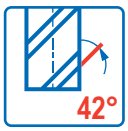


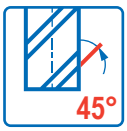


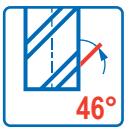


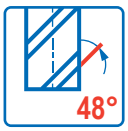


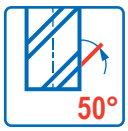


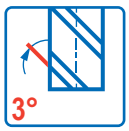


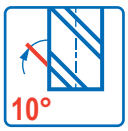


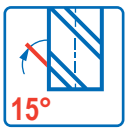


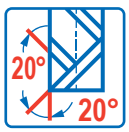


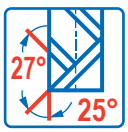


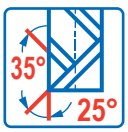


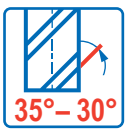


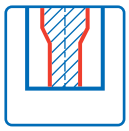


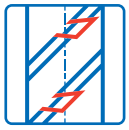


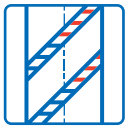


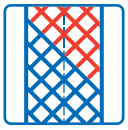












Once in place and optimized, this has proven to be the number one cost saver in multiple applications!

You can find JABRO® JS522 on page 114.

UNIVERSAL

Seco offers a complete range of high performance solid carbide square shoulder end mills, ballnose cutters and finish end mills for high productivity and extended tool life. This range covers universal products and optimized end mills for specific workpiece materials.

Universal products offer full machining flexibility at an excellent price/performance ratio.

- JSE512, JSE513, JSE514, JS553, JS554, JS564, JS565 and JS520 with 45° chamfer type.
- JS522, JS553, JS554, JH910, JH930, JHF980, J36, V31, JME542, JME562 and JME564 for radius type.
- JS506, JS509, HK, HKM and J29 for conical type.
- JSB512, JS532, JS533, JS534, JHB970, JMB542, JMB562 and JMB563 for ball-nose type.
