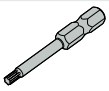
DOUBLE OCTOMILL 05/09

The Double Octomill face milling cutter is a highly versatile, economic and productive tool that can be used for both roughing and finishing. With double-sided inserts featuring a total of 16 cutting edges, the cutter represents a combination of high performance with cost-effective operation. Double Octomill also has a coated, pre-hardened body to ensure long tool life by protecting the tool from wear and preventing chips from welding to it.

- Insert size 05, cutter range 25-200mm (1.25-8 inch)
- Insert size 09, cutter range 63-500mm (2.5-12.5 inch)
- Double-sided inserts with 16 cutting edges

Double Octomill™ R217.48-05 – Metric



- For insert selection and cutting data recommendations, see page(s) 245 - 247
- For complete insert programme, see page(s) 816
- For ISO attribute explanation, see page 16

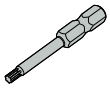
QUATTROMILL 09/12/15

QuattroMill™ is more than a general-purpose face mill. It is a simple solution with more teeth per cutter that increases productivity, ease of use, reliability and precision for the full range of face milling applications and materials. QuattroMill features strong, square inserts that meet the needs of most challenging applications, and a strong center locking screw with quick insert location make it easy to replace inserts. The cutter body is coated and pre-hardened and features a large chip space for steel and stainless steel machining. Positive cutting rakes/negative radial rakes maximize a machine tool's capability and enables increased productivity in both stable and unstable conditions.

- Insert size 09, cutter range 20-315mm (0.75-3 inch)
- Insert size 12, cutter range 40-315mm (1.5-8 inch)
- Insert size 15, cutter range 63-315mm (3-6 inch)

Quattromill R217.53-09 – Metric



- For insert selection and cutting data recommendations, see page(s) 264-266
- For complete insert programme, see page(s) 822
- For ISO attribute explanation, see page 16

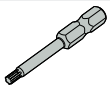
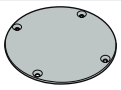
R220.88 (SNMU)

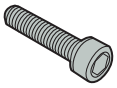
The R220.88 cutters with SNMU12/16 inserts provide high depth-of-cut capabilities, along with an economical eight cutting edges per insert. These cutters provide strong performance in machining steels and cast iron and are available in two insert sizes, 12 and 16. This tool is ideal for roughing and semi-finishing operations.

- Insert size 12, cutter range 40-160mm (1.5-6.0 inch)
- Insert size 16, cutter range 63-160mm (2.5-6.0 inch)

R220.88-12 – Metric







- For insert selection and cutting data recommendations, see page(s) 287-288
- For complete insert programme, see page(s) 834
- For ISO attribute explanation, see page 16

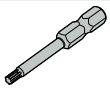
OCTOMILL 05/07

Octomill™ 05 and 07 provide one of the most comprehensive ranges of face milling cutters on the market. Designed to handle many applications, Octomill 05 and 07 offer high performance and process security. These cutters excel in medium to rough machining in steel and stainless steel. With eight edges, the cutters are more economical than traditional cutters due to a lower cost per cutting edge.

- Insert size 05, cutter range 32-315mm (1.5-4 inch)
- Insert size 07, cutter range 50-315mm (2.5-6 inch)
- Octomill 05 is for small machines and Octomill 07 is for medium sized machines

Octomill R217/R220.43-05 – Metric



- For insert selection and cutting data recommendations, see page(s) 300 - 302
- For complete insert programme, see page(s) 815
- For ISO attribute explanation, see page 16

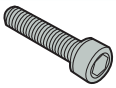
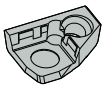
R220.60

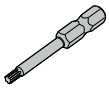
Face mills for heavy duty. Strong inserts and the cutter is equipt with cassettes for handling high metal removal.

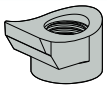
- Cutter range 63-250 mm
- Inserts SPEN/SPER/SPMR19
- Available in many different grades for most common workpiece materials

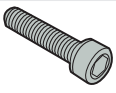
R220.60-19CM – Metric

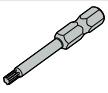












- For insert selection and cutting data recommendations, see page(s) 315 - 316
- For complete insert programme, see page(s) 836
- For ISO attribute explanation, see page 16

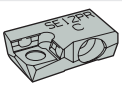
R220.30 -12

This cutter family can meet the highest surface finish requirements in a variety of materials. The strength is in cast iron materials due to a comprehensive offer in geometry and grade combinations. The adjustable pocket ensures a high run out accuracy and the precise inserts reduces the efforts to set the cutter. The single sided inserts are light cutting and include a long wiper flat to meet the requirements of bigger diameter cutters. The included crown design on the SEEX1203 inserts compensates a misalignment between spindle head and the workpiece to ensure a superb surface finish and appearance. The inserts offer is ideal for special cutters like hybrid cutters for rough-finishing with dedicated roughing inserts as well as pure finishing cutters with customized pitches and handling units.

- DC = 80 – 355 mm
- Available in both course and close pitch versions
- Available in both cassette version and fix pocket and also for mounting as CAP

R220.30-12CT – Metric



- For insert selection and cutting data recommendations, see page(s) 321 - 322
- For complete insert programme, see page(s) 823
- For ISO attribute explanation, see page 16

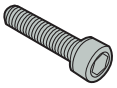
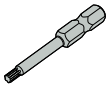
R230.19

This finishing cutter subsist on an exceptional run out even though it is a fixed pocket solution. The axial mounted inserts have a high accuracy and are light cutting at the same time thanks to the positive rake face design. The small wiper flat length created furthermore low axial tool pressure and the high run out accuracy enables you to run above the wiper flat and still achieve an excellent surface finish. This family is ideal for weak machines and smaller diameter in steel and stainless-steel materials.

- DC = 30 – 100 mm
- R230.19 Face mills for finishing
- Inserts with 4 cutting edges
- Single sided inserts

R230.19 - Metric – Metric





- For insert selection and cutting data recommendations, see page(s) 325 - 326
- For complete insert programme, see page(s) N/A
- For ISO attribute explanation, see page 16

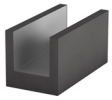
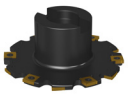
A full range of cutters for all kinds of disc Milling operations

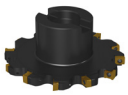


Seco's disc mills, available from 0,7 to 32 mm (0.029 to 1.25") in width, offer a wide range of cutter diameters and connection types suitable for all relevant machine tools and disc milling applications.

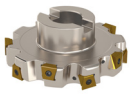
The core of the range consists of 4 main cutter families



Min

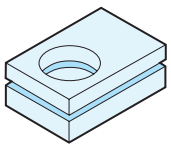


Max

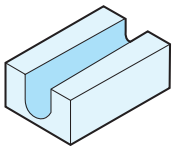


335.10 for narrow slotting and sawing
Width 2,25-4,1mm, .089"-.122"

335.19 for small width of cut and sawing
Fixed pockets
Width 4-12mm, .156"-.500"

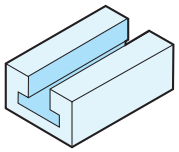


335.18 for medium width of cut
Fixed and adjustable width
Width 8-20mm, .312"-.750"



335.25 for large width of cut
Fixed and adjustable width
Width 13,5 -32mm, .53"-1.26"

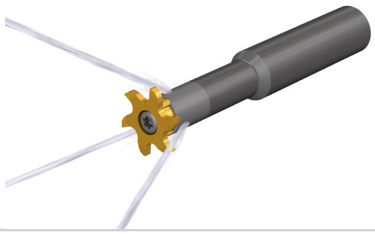
And 4 other families dedicated to specific disc milling operation

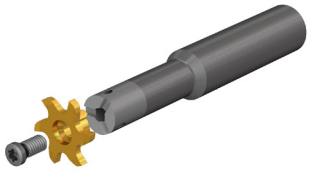


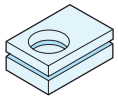
335.14 and 335.15 for circlips groove and narrow slotting
Width 0,7-5,15mm, .029"-.203"

335.29, 335.18 and 335.25 equipped with round insert - full radius profile and copy milling. Fixed and adjustable width
Width 5 - 20 mm, .197"-.787"

335.16 for T-slots
Width 11 - 22 mm, 0.387" - 0.823"



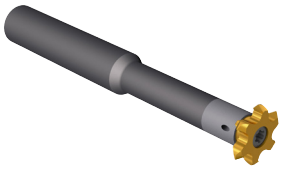




335.14

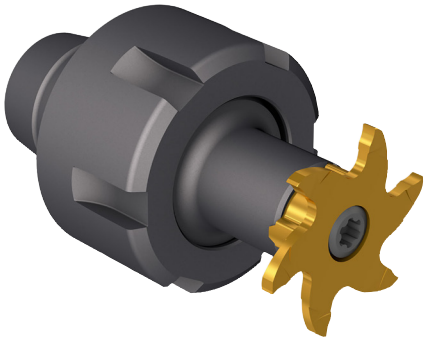
Small diameter disc milling cutter system dedicated for shallow grooving, circlips grooving, top and bottom chamfering, full radius profile and threading

- Exchangeable carbide head systems to help controlling machining costs
- Width of cut range 0.7-6.0 mm (0.043-0.236 inch)
- Diameter insert range 9.7-34.7 mm (.381 - 1.36 inch)
- A comprehensive range of cylindrical carbide and steel shanks, complemented with integrated ER collet chuck holder
- High precision width of cut +/-0.02mm - +/-0.0008”



Disc Milling cutter 335.14

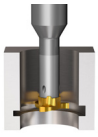
Disc milling cutter with exchangeable carbide head



A broad range of heads and shanks available for all your disc milling operation by circular interpolation or linear slotting.
- Strong, Reliable and precise connection between the head and the cutter body
- Cover all type of material with universal M geometry and F32M grade
- Heads from diameter 9.7 mm

Cylindrical

ER collet chuck



2 types of shanks available: cylindrical available both in steel and carbide, or ER collet chuck system

Grooving

Head from dia 9.7 to 34.7 mm (0.382" to 1.366") for bore with minimum dia 10mm (0.393")
Width from 1 to 6 mm (0.039 to 0.236")

Disc Milling cutter 335.14

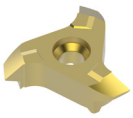
Circlip groove

Head from dia 9.7 to 21.7 mm (0.382 to 0.854") and width from 0.7 to 5.15 mm (.029" to.203")

Full radius profile

Head from dia 11.7 to 21.7 (0.460 to 0.854") and width from 1 to 5 mm (0.039 to 0.197")

Top & bottom Chamfering profile



Head from dia 11.7 to 21.7 (0.460 to 0.854")and width from 1 to 4 mm (0.039 to 0.157")

Threading

Head from dia 11,7 to 27,7 mm (0.460 to 0.854") for partial metric threads with pitch 1-6 mm and full profile whitworth threads with pitch 19 to 11 tpi and UN threads with pitch 24 to 6 tpi.

Technical information – Threading

Recommendation for circular interpolation

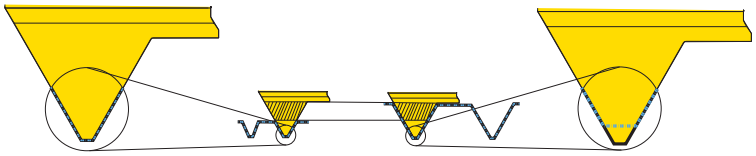
To avoid vibration and insert damage when working with internal circular interpolation, we recommend a progressive entrance into the material. The circular arc angle for the progressive immersion should be between 45° and 180°

When calculating cutting datas for circular interpolation please be aware of the real radial depth of cut and the feed speed related to the centre of the cutter- See page 863 for more info

Milling insert with 6 cutting edges

If vibrations appear when working with milling insert with 6 cutting edges please reduce the radial depth of cut to reduce the number of teeth into contact with the material , an alternative is to choose an insert with 3 cutting edges instead.

Holder recommendation



For best result in terms of stability, precision and reliability, it is recommended to use the following SECO-Tooling holders
-High precision collet chucks ERHP 5672
-Shrink fit Holder SFD 5603, SFR 5600 and SFS 5801
-ER Collet chuck ER 5675
-Power Milling Chuck, PMC

Please see SECO Tooling System catalogue for more information.

Technical information – Threading

Pitch (as of/up to)

Actual Thread

Standard thread form

Thread milling by circular interpolation can cause thread profi le violation when using insert for partial thread. Keep this in mind during the process of selecting tool. The tool diameter need to be small enough compare to the hole diameter. The pitch also needs to be considered.

Insert with partial profile for Metric ISO-Threads are multi tools. That means that each insert could machine different pitches. The insert is designed to meet the minimum pitch size (TPN); Machining this pitch will result in a standard conform thread form.

The given maximum pitch size (TPX) can be machined also with this insert at the expense of standard conformity: The result will be a slightly deeper thread than the standard. The deeper thread is normally accepted, but the application and use needs to be evaluated.

Following table is a recommendation over maximum tool diameter in relation to the thread size and pitch:

ISO-Thread, partial profile											
Pitch	M12	M16	M20	M24	M27	M30	M36	M42	M48	M56	M60

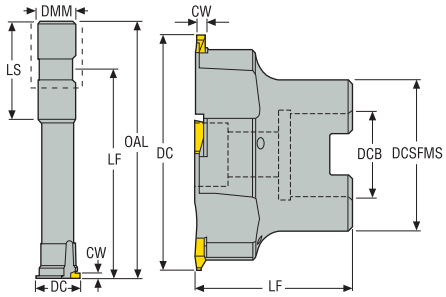
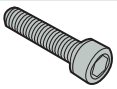
335.15



Disc Milling cutter system designed to generate circle snap-ring grooves and shallow slotting grooves

- Width of cut 1.1-5.15 mm (.043 - .202 inch)
- Cutter range diameter 24-63 mm (1 - 2.5 inch)
- Available with Weldon, Arbor and Combimaster with through coolant connection
- Economical light cutting insert with 2 cutting edges design
- Insert width precision +0/+0.05mm - +0/+0.002”

R335.15 – Metric



- For insert selection and cutting data recommendations, see page(s) 366 - 367
- For complete insert programme, see page(s) 860
- For ISO attribute explanation, see page 16

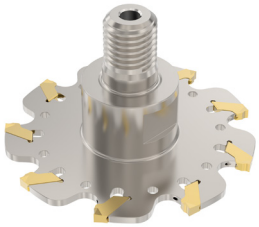
335.10

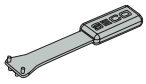


Easy to use and reliable disc milling cutter system dedicated for slim slotting and cut-off operations.

- Self-clamping carbide insert design, the insert is retained by the spring action of the steel part of the cutter
- Width of cut 2.25-4.1 mm (.088 - .161 inch)
- Cutter range diameter 40-315 mm (1.5 - 6.0 inch)
- Available with Weldon, Combimaster, Arbor and Arbor hole connection
- Large cutter diameter with HSS cutter body material for high rigidity and reliability
- Small cutter diameter with internal coolant and close pitch design for high productivity
- Insert width precision from +/- 0.05 to 0.08mm - +/-0.002 to 0.003”

Width 2,25/2,5/3,1 mm – full side – close pitch design with internal coolant

Cutter 335.10 - Insert 150.10 – Metric



- For insert selection and cutting data recommendations, see page(s) 378-379
- For complete insert programme, see page(s) 854
- For ISO attribute explanation, see page 16

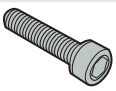
335.19

Economical, precise and free-cutting disc milling cutter system dedicated for small width of cut slotting and cutting off operations

- Width of cut 4-12 mm (.157 - .500 inch) - Flat bottom slot with SNHQ inserts.
- Cutter range diameter 40-250 mm (1.5 - 8 inch)
- Available with Cylindrical, Arbor, Arbor hole and Combimaster connection, with through coolant and close pitch option
- High insert precision with built-in wiper flat and corner radii range 0.2-6 mm (.008 - 0.236 inch)
- Economical solution with up to 4 cutting edges per inserts
- Theoretical tolerance of the slot -0.02 /+0.08mm - -0.001 / +0.003”

Width 4 mm - full side

Cutter 335.19 - Insert SNHQ – Metric



- For insert selection and cutting data recommendations, see page(s) 394-395
- For complete insert programme, see page(s) 826, 827, 833
- For spare parts and technical information, see page 390-391
- See “CW” Cutting Width information page 380
- For ISO attribute explanation, see page 16

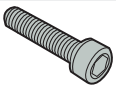
335.18

Highly economical, versatile and free-cutting disc milling cutter system dedicated for medium width of cut slotting, or half side and face cutting operations

- Width of cut 8-20 mm (.312 - .7500 inch) - slot with flat bottom
- Cutter range diameter 32-315 mm (1.25 - 12 inch)
- Fixed or adjustable cutting width with replaceable cassettes
- Available with Cylindrical, Arbor, Arbor hole and Combimaster connection, with through coolant and close pitch option
- Corner radii range 0.4-4 mm (.016 - 0.16 inch), and possibility to apply round insert dia 8/10/12mm in adjustable system
- Economical solution with up to 4 cutting edges per insert
- Basic tolerance of the slot:
  Fixed pocket cutters: +/-0.08mm (+/-0.003”)
  Adjustable cutters: +/-0.07mm (+/-0.0025”)

Width 8/10 mm - full side - Fixed pocket

Cutter 335.18 - Insert LNK. – Metric



- For insert selection and cutting data recommendations, see page(s) 454-455
- For complete insert programme, see page(s) 811-812
- For spare parts and technical information, see page 447-453
- For ISO attribute explanation, see page 16

All listed adjustable cutters are set to the minimum cutter width CWN (factory setting).
Adjustable cutter may be ordered with the cutting width set to any value within its range (CWN - CWX), see technical data for more info at page 447

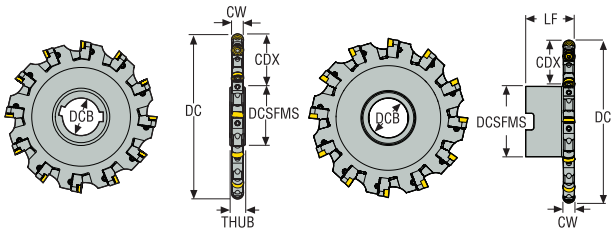
Cutter 335.18 - Insert RD..08/RD..10T3 – Metric

Width 8-12 mm - full side - radius profile - Adjustable design



- For insert selection and cutting data recommendations, see page(s) 470-475
- For complete insert programme, see page(s) 817
- For spare parts and technical information, see page 447-453
- For ISO attribute explanation, see page 16

All listed adjustable cutters are set to the minimum cutter width CWN (factory setting).
Adjustable cutter may be ordered with the cutting width set to any value within its range (CWN - CWX), see technical data for more info at page 447

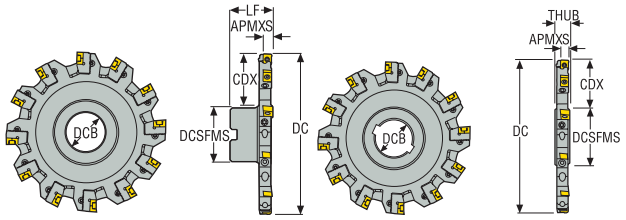
Width max 5-6 mm - Half side - Right hand with cassette

Cutter 335.18 - Insert LNK. – Metric



- For insert selection and cutting data recommendations, see page(s) 454-455
- For complete insert programme, see page(s) 811-812
- For spare parts and technical information, see page 447-453
- For ISO attribute explanation, see page 16

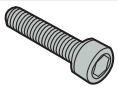
335.25

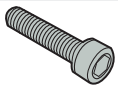
Easy to use, strong and free-cutting disc milling cutter system dedicated for large width of cut slotting, or half side and face cutting operations

- Width of cut 13.5-32 mm (.512 - 1.25 inch) - slot with flat bottom
- Cutter range diameter 80-315 mm (4.0 - 12 inch)
- Fixed or adjustable cutting width with replaceable cassettes
- Available with Arbor or Arbor hole connection , with through coolant option up to diameter 160mm
- Corner radii range 0.4-6 mm (.016 - 0.236 inch), and possibility to apply round insert dia 16/20 mm on adjustable system
- Economical solution with 4 cutting edges per insert
- Basic tolerance of the slot: Fixed pocket cutters: +/-0.08mm (+/-0.003”),Adjustable cutter: +/-0.07mm (+/-0.0025”)

Cutter 335.25 - Insert XNHQ/LNHQ – Metric

Width 15/20/25 mm - Full side and face - Fixed pocket





- For insert selection and cutting data recommendations, see page(s) 456-463
- For complete insert programme, see page(s) 841, 842
- For spare parts and technical information, see page 447-453
- For ISO attribute explanation, see page 16

All listed adjustable cutters are set to the minimum cutter width CWN (factory setting).
Adjustable cutter may be ordered with the cutting width set to any value within its range (CWN - CWX), see technical data for more info at page 447

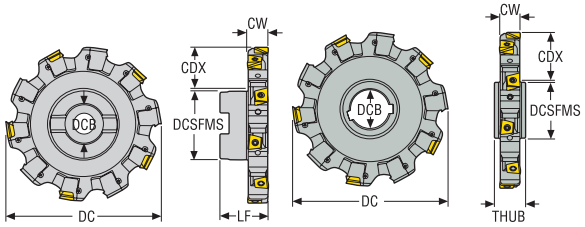
Width 0.53-0.83” - Full side and face - Adjustable design

Cutter 335.25 - Insert XNHQ – inch



- For insert selection and cutting data recommendations, see page(s) 456-459
- For complete insert programme, see page(s) 841, 842
- For spare parts and technical information, see page 447-453
- For ISO attribute explanation, see page 16

All listed adjustable cutters are set to the minimum cutter width CWN (factory setting).
Adjustable cutter may be ordered with the cutting width set to any value within its range (CWN - CWX), see technical data for more info at page 447

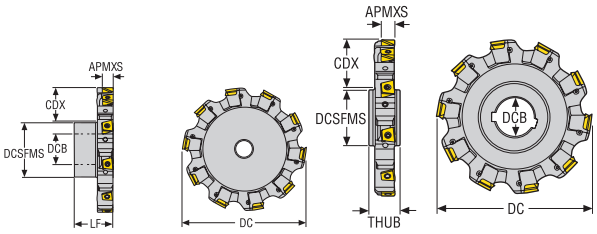
Max depth of cut 9-11,1 mm - Half side - Right hand with cassette

Cutter 335.25 - Insert XNHQ – Metric



- For insert selection and cutting data recommendations, see page(s) 456-459
- For complete insert programme, see page(s) 841, 842
- For spare parts and technical information, see page 447-453
- For ISO attribute explanation, see page 16

335.29

Free-cutting disc milling cutter system equipped with round inserts dedicated for slotting with full radius or 3D profiling operation

- Width of cut 5-12 mm (.236 - .394 inch)
- Cutter range diameter 25-80 mm (1.5 - 3.0 inch)
- Available with Cylindrical, Arbor, and Combimaster connection, with through coolant capability
- Economical solution with 4 cutting edges per insert

Cutter 335.29 - Round insert – Metric

Width 5/6/7/8/10/12 mm - full side - radius profile - Fixed pocket

- For insert selection and cutting data recommendations, see page(s) 464-478
- For complete insert programme, see page(s) 817, 819
- For spare parts and technical information, see page 447-453
- For ISO attribute explanation, see page 16

Note: For disc cutter not mentioned in the tables, please use cross head retaining screw, supplied with the Seco Tooling System shell mill holder

To order a standard adjustable disc milling cutter set at a specific width:

To obtain an adjustable disc mill set to your required dimension add "/ADJ" at the end of the reference and specify your required width which will be set with a tolerance of +/- 0,03 mm (+/- .001"). Without specification the standard disc mill is set to the minimum cutting width.

Ordering example: R335.25-200.1317.40-7N/ADJ and specify on your order your width to any value within its range, for example specify a cutting width of 15.50mm in your order. The disc mill will be set to 15.50 +/- 0,03 mm (0.610" +/- .001").

The delivery time is approx. 3 days for a set adjustable disc mill.

(R)335.18 – LNK inserts

LNK.05
For width 8-10, .312"-.375"

LNK.06
For width 10-12, .625"

LNK.08
For width 12-15, 500"-.750"

LNK.06 and LNK.08 have the same size, but LNK.06 have a reduced cutting length (6mm, .250") to decrease cutting forces for width= 10-12 mm, .394"-.472". LNK.08 have a cutting length = 7,5 mm, .295" for width 12-15 mm, .500"-.750".

*Cassette compatible with adjustable disc milling cutter x335.18-xxx-1418 series to generate width of cut from 14 to 17 mm, generating nominal “DC” diameter
**Cassette compatible with adjustable disc milling cutter x335.18-xxx-1924 series to generate width of cut from 18.5 to 21 mm, generating nominal “DC” diameter
***Cassette compatible with adjustable disc milling cutter x335.18-xxx-2530 series to generate width of cut from 24,3 to 26 mm, generating nominal “DC” diameter
**** Cassette compatible with adjustable disc milling cutter x335.18-xxx-2530 series to generate width of cut from 26 to 30,5 mm, generating nominal “DC” diameter

Spare parts for adjustable cutter (R)335.25 equipped with round insert dia 16 and 20mm - Inch

335.16

Free-cutting and reliable disc milling cutter system dedicated for T-shape slotting

- Width of cut 10.91 -21 mm (.387 - .823 inch)
- Cutter range diameter 25-50 mm (0.969 - 1.844 inch)
- Weldon connection, with through coolant capability for reliable chips evacuation
- Economical solution with 4 cutting edges per insert

R335.16 – Metric

- For insert selection and cutting data recommendations, see page(s) 488-493
- For complete insert programme, see page(s) 812, 838
- For ISO attribute explanation, see page 16

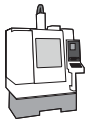
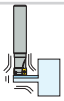
x — x indicates number of teeth (first choice)

x — x indicates number of teeth



Troubleshooter for unstable fixturing and/or unstable conditions



Basic choice

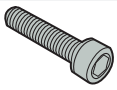
HIGH FEED SP

For challenging ISO P, M and S materials, the Seco High Feed SP features a combination of dedicated cutting geometries and insert grades, as well as optimized lead angles, that combine to boost material removal rates, maximize chip evacuation and extend tool life. Packed with versility, one High Feed SP tool optimizes copy milling, ramping, pocketing, face milling and plunging operations to reduce tooling inventory further. Designed for ease of use, the milling tools provide simple foolproof insert indexing that prevents operator mistakes, unexpected machine downtime and scrapped parts.

- 3 insert sizes, with IC = 10, 14 & 18mm
- 30 items in metric version, Ø32 to Ø160mm
- 19 items in inch version, Ø01.25 to Ø06.00
- Standard and close pitch
- Well proven SPKT inserts with a range of premium Seco grades optimized for tough materials.

R217/220.21-SP10 – Metric



- For insert selection and cutting data recommendations, see page(s) 507-509
- For complete insert programme, see page(s) 837
- For ISO attribute explanation, see page 16

R217/220.21 HIGH FEED 2

Highfeed 2 for LP05/06/09 insert types, 2-cutting edge, single sided positive inserts.
The inserts have modern geometries that provide the lowest possible cutting forces in all materials. These low forces lead to superior tool life.

- Cutter range 12-100 mm (.5 - 4 inch)
- Max depths of cut by insert type: LP05/0.65 mm, LP06/0.8 mm, LP09/1.8 mm
- First choice for ISO M & S materials in small-to-medium size machines
- Excellent solution for plunge milling

R217.21-LP05 – Metric

- For insert selection and cutting data recommendations, see page(s) 533-535
- For complete insert programme, see page(s) 813
- For ISO attribute explanation, see page 16

R217/220.21 HIGH FEED 4

Highfeed 4 for LO06 insert types, 4-cutting edge, double sided inserts.
The inserts is strong and reliable for applications with low demands on ramping capability. A wide selection of inserts and geometries make it easy to find the right combination for your application.

- Cutter range 20-63 mm (1 - 2.5 inch)
- Max depth of cut 0.9 mm
- First choice for ISO P & K materials in small-to-medium-size machines

R217.21-LO06 – Metric

- For insert selection and cutting data recommendations, see page(s) 555-557
- For complete insert programme, see page(s) 808
- For ISO attribute explanation, see page 16

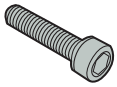
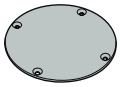
R217/220.21 HIGH FEED 6

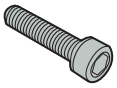
High feed 6, for 218.21 insert type, 6-cutting edge, double sided inserts.
This familly consists of shell end mill bodies with fixed pockets and very strong negative inserts with six cutting edges.

- Cutter range 40-160 mm (1.5 - 6 inch)
- Max depth of cut 1.8 mm
- First choice for ISO P & K materials for medium-size machines

R220.21-R230 – Metric







- For insert selection and cutting data recommendations, see page(s) 562-564
- For complete insert programme, see page(s) 857
- For ISO attribute explanation, see page 16

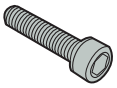
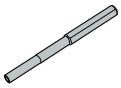
R220.21 (ON09) HIGH FEED

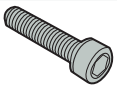
High feed double octomill insert cutters. ON09 inserts have 16 cutting edges, making them the most cost-effective choice for face milling applications using a high feed strategy.
HSS pins securely position inserts in the fixed pockets of the cutter and decrease the time required for indexing.

- Cutter range 80-160 mm (3 - 6 inch)
- Max depth of cut 2 mm (.078 inch)
- Facing applications only

R220.21-ON09 – Metric







- For insert selection and cutting data recommendations, see page(s) 568-569
- For complete insert programme, see page(s) 816
- For ISO attribute explanation, see page 16

R217/220.21 HIGH FEED

High feed mills for general purpose applications, 3-cutting edge, single sided inserts.
218.19 insert range include a wide selection of cutting geometries and grades for many different materials.

- Cutter range 16-100 mm (.625-4 inch)
- Suitable for long overhangs and/or unstable conditions
- Small-to-medium sized CNC machines with high rpms and high feed rates
- Also works for machines that run lower rpms and feed rates

R217.21 – Metric

- For insert selection and cutting data recommendations, see page(s) 578-588
- For complete insert programme, see page(s) 855
- For ISO attribute explanation, see page 16

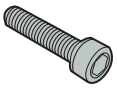
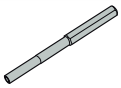
R220.21 (SC12) HIGH FEED

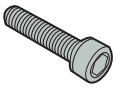
High feed mills for high-torque machines, for SCET12 inserts, 4-cutting edge, single sided. These cutter bodies with fixed pockets are optimised for strong horizontal machines. SCET120630T is our 6.35-mm thick insert range with a corner radius of 3.0 mm.

- Cutter range 50-160 mm (2 - 4 inch)
- Max depth of cut 1,5 mm (.059 inch)
- Heavy roughing operations
- Large, powerful machines

R220.21-SC – Metric







- For insert selection and cutting data recommendations, see page(s) 591-592
- For complete insert programme, see page(s) 821
- For ISO attribute explanation, see page 16

R217/220.29 ROUND INSERT CUTTERS

Our comprehensive range of round insert cutters, R217/220.29, is ideal for semi-finishing and roughing in all copy milling applications and materials.

- Insert size 05, cutter range 10-20mm
- Insert size 06, cutter range 12-40mm (0.75 - 1.25 inch)
- Insert size 07, cutter range 16-25mm
- Insert size 08, cutter range 16-50mm
- Insert size 3/4, cutter range (2.5 - 5 inch)
- Insert size 10, cutter range 16-63mm (1 - 2.0 inch)
- Insert size 12, cutter range 25-137mm (1 - 6 inch)
- Insert size 16, cutter range 32-160mm (2.0 - 4.0 inch)
- Insert size 20, cutter range 25-250mm (2 - 3 inch)

R217.29-025 – Metric

- For insert selection and cutting data recommendations, see page(s) 608-609

R217/220.28 ROUND INSERT CUTTERS

Our range of double-sided round inserts in size 12 and cutters, R217/220.28, is ideal for light copy milling applications, face milling, slot milling and side milling in all workpiece materials.

- Cutter range 32-100 mm (1.25 - 4 inch)
- Max depth of cut 6 mm (.236 inch)
- Recommended slotting depth of cut 3 mm (.118 inch)
- Up to 16 cutting edges

R217.28-06 – inch

- For insert selection and cutting data recommendations, see page(s) 661-662
- For complete insert programme, see page(s) 818
- For ISO attribute explanation, see page 16

R218.20/19/24 BALLNOSE

We offer a variety of highly productive ballnose cutters for all materials and applications, ranging from general purpose to segment-oriented tools. The ballnose cutter is designed to deliver higher performance and better reliability in copy milling applications.

- Ballnose K=1, 3-cutting edge, cutter range 16-40 mm (0.75 - 1 inch)
- Ballnose K=2, 2-cutting edge, cutter range 12-50 mm (0.5 - 2 inch)
- Tapered Ballnose, 2-cutting edge, cutter range 16 mm

R218.20 – Metric

- For insert selection and cutting data recommendations, see page(s) 672-693
- For complete insert programme, see page(s) 837, 856
- For ISO attribute explanation, see page 16

R217/220.97

Aluminium routers high productivity cutters are designed to provide optimal performance in slotting, square shoulder milling and pocketing operations in aluminum. These tools are specifically optimized to achieve high speed and high metal removal rates in aluminum.

- Cutter range 16-100mm (0.625 - 4 inch)
- Available in cylindrical, combimaster or for arbor mounting

R217.97-X08 – Metric

- For insert selection and cutting data recommendations, see page(s) 726
- For complete insert programme, see page(s) 852
- For ISO attribute explanation, see page 16

Square 6 PLUNGE MILL

The Plunge Square 6 cutters are equipt with double sided inserts, means 6 cutting edges.

- Cutter range: 40-100 mm (1.5 - 3 inch)
- Max radial depth of cut 7 mm (.275 inch)
- Insert corner radii range 0.8-1.6 mm (.031 - .063 inch)

R217/220.79-08 – Metric

- For insert selection and cutting data recommendations, see page(s) 737-738
- For complete insert programme, see page(s) 840
- For ISO attribute explanation, see page 16

TURBO PLUNGE MILL

Turbo Plunge mills can be used for both up-copying and down-copying in an axial feed direction, such as in deep cavities for mold tools. All cutters in this family incorporate internal coolant to optimize chip evacuation.

- Insert size 06, cutter range 12-16 mm
- Insert size 10, cutter range 20-32 mm (0.75 - 1 inch)
- Insert size 12, cutter range 25-63 mm (1 inch)

R217/220.79-06 – Metric

- For insert selection and cutting data recommendations, see page(s) 741-742
- For complete insert programme, see page(s) 843
- For ISO attribute explanation, see page 16

Accessories

For cutter	Insert clamping torque	Torque key
		
R217.79-..	8.0IN.LBS	T00-07P09

Torque and fixed keys, see page 872

R217.79-10 – Metric

- For insert selection and cutting data recommendations, see page(s) 747-749
- For complete insert programme, see page(s) 844, 845
- For ISO attribute explanation, see page 16

Designation	Item number	Type of mounting	DC	ZEFP	APMXE	TDZ	DCSFMS	LF	Weight	RPMX	Insert
			mm		mm		mm	mm	kg

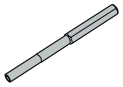
R217/220.79-12

The R217/220.79 for SCET12 inserts are strong and robust plunge mill.

- Cutter range 32-160 mm (1.25 - 6 inch)
- Max radial depth of cut: 11 mm (.433 inch)
- Insert corner radii range 1.2-3.1 mm (.047 - .122 inch)

R217.79-SC..12 – Metric



- For insert selection and cutting data recommendations, see page(s) 762-763
- For complete insert programme, see page(s) 821
- For ISO attribute explanation, see page 16

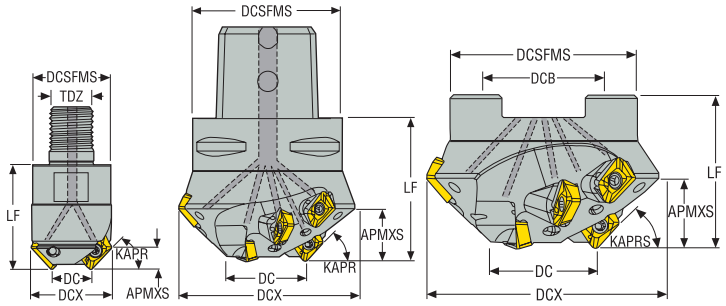
Chamfer Mills



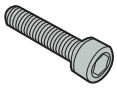
Turbo 12, R217/220.49-XO12 Chamfer mills, for XOMX12 inserts with 2 cutting edges and is available in many different grades for most common workpiece materials

- Chamfer angle 30°, 45°, 60° and 75°
- Max. depth of cut 31 mm (1.22 inch) with the 75° milling cutter
- Front chamfering
- Available in combimaster, Seco-Capto or for arbor mounting

R215/220.49 Chamfer mills for SPMX06/09/12 insert types, 4-cutting edges, single sided positive inserts.

- Chamfer angle 45° and 60°
- Front and back chamfering
- Available in Weldon and Arbor mounting

R217/220.49-XO12 – Metric



- For insert selection and cutting data recommendations, see page(s) 767-769
- For complete insert programme, see page(s) 846, 847
- For ISO attribute explanation, see page 16

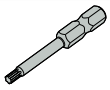
R417.19 SPOT FACING

Seco spot facing mills are cutters for milling spot faces of blind and countersunk holes. Key benefits include smooth cutting, reduced spindle bearing wear via a highly balanced tool and high security through a center-lock clamping system, all engineered in an economical solution.

- Strong SPMX inserts, available in many different grades for most workpiece materials
- Inserts with 4 cutting edges
- Cutter range metric, Ø 18-42mm (Imperial Ø 0.625-1.620 inch)

R417.19-SPMX – Metric



- For insert selection and cutting data recommendations, see page(s) 777-779
- For complete insert programme, see page(s) 838
- For ISO attribute explanation, see page 16

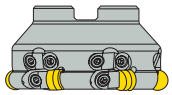
Introduction

Polycrystalline Cubic Boron Nitride (PCBN) is a material which is sintered at extremely high pressure and high temperature into a wear-resistant material with properties close to those of diamond. Due to the hot hardness, oxidation resistance and fracture toughness of the material, inserts made of PCBN have excellent edge strength and long tool life when machining hard ferrous materials and pearlitic grey cast iron.

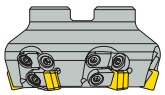
Secomax™ PCBN inserts are suitable for machining:



- Hardened steel (including hard-facing alloys)
- Pearlitic grey cast iron
- Chilled and white cast iron
- Manganese steel
- Cemented carbide
- Powder Metallurgy (PM) alloys

For more information including a comprehensive guide to understanding and applying PCBN successfully, please ask your sales representative for the Secomax™ PCBN, Technical Guide (available in English).

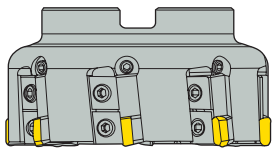
Selection of insert type	
	• Solid insert • According to the geometry, two sides can be used. • Grades: CBN200, CBN300, CBN300P, CBN500, CBN600
	• CBN layer sintered on to carbide. One side is usable. • Grades: CBN200
	



Cutters for PCBN inserts

Face milling cutter type R217/220.70

- Cutter especially developed for CBN inserts, 2 insert sizes.
- Maximum cutting depth 3 mm DC = 20-63 mm and maximum cutting depth 4,5 mm DC = 63-200 mm (DC = 125-200 mm fitted with wiper insert).
- Inserts for finishing: RNGN060300E (E = honed) RNGN/RNMN090300E
- Inserts for roughing: RNGN/RNMN060300S (S = chamfered and honed) RNGN/RNMN090300S
- Wiper insert: SNEX120312ZZ
- The relation between cutting depth and number of usable cutting edges (per side).



Face milling cutter type 220.74

- Cutter especially developed for CBN inserts, maximum cutting depth 8,0 mm D = 63-200 mm. (D = 125-200 mm fitted with wiper insert).
- Inserts for finishing: SNEN0903ENE-M06 (E = honed) SNMN090308E SNMN090312E
- Inserts for roughing: SNEN0903ENS-M08 (S = chamfered and honed) SNMN090308S SNMN090312S SNMN090316S
- Wiper insert: SNEX120312ZZ

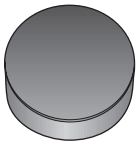
Introduction

Application areas

Secomax ceramics include a range of products developed to meet the manufacturing industries ever increasing demands on productivity and product performance.

The inserts are die-pressed and sintered by a HIP process using very fine and pure raw materials with fine microstructure to reach excellent material properties. All surfaces are then ground ensuring a product with superior dimensions and tolerances.

This comes together in a product with outstanding features:



– high thermal shock resistance

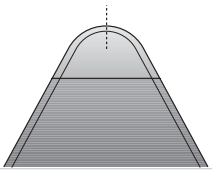
– optimised fracture toughness

– excellent wear resistance

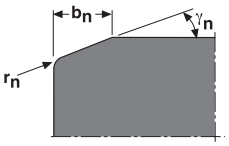
– high product quality

CS300

Format:
Solid.



Composition:
Sialon (Si, Al, O, N) ceramic grade.

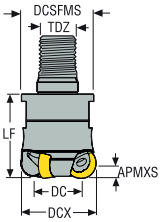


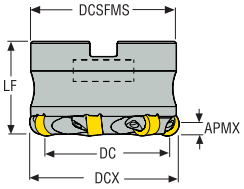
Coating:
No coating.

Chamfer size and angle

CS300	=	0,10 mm x 20°
S	=	Chamfered and honed
T	=	Chamfered, no honing
E	=	Honed

Chamfer size and angle





b_n = Chamfer width
γ_n = Chamfer angle
r_n = Hone radius

Ceramic, Roughing a_p 0,5 – 3,0 mm/*Inch*

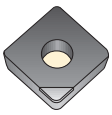
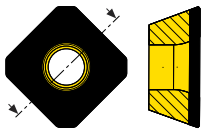
Introduction



Polycrystalline Diamond (PCD) is produced by sintering together carefully selected particles of diamond under conditions of high temperature and high pressure. PCD cutting tools combine the hardness, abrasion resistance and thermal conductivity of diamond with the toughness of tungsten carbide.

Secomax™ PCD inserts are suitable for machining non-ferrous metals and alloys, e.g.:



- Aluminium
- Copper
- Brass
- Bronze
- Cemented carbide

It can also be used for other materials, e.g.:

- Composites (MMC, ...)
- Reinforced plastics
- Graphite
- Tungsten carbide
- Ceramics
- Titanium alloys

Selection of insert types	
	• Sintered layer -LF • PCD sintered on carbide. • All cutting edges on one side are usable. • Grades: PCD20, PCD30M
	• Brazed tip -L1 and L2 • PCD brazed on to standard carbide inserts. • Grades:PCD05, PCD20, PCD30

Inserts for standard milling cutters

Face milling cutters		Face milling cutters	
• SEHN12 • R220.13 • R220.30		• SEEX12 • R220.53	
Face milling cutters		**Square shoulder milling cutters**	
• OFEX05 • R220.43		• XOEX06/10/12/16 • 217/220.69	

Cutting speed recommendations are in the cutting data table.
Feed rate recommendations are in the cutting data table.

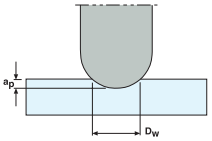
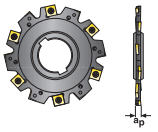
Tolerance (mm): CW: +0/+0.05 - CDX: +0/+0.15

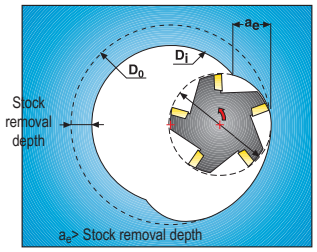




Cutting data calculation		
RPM	$n = \frac{v_c \cdot 1000}{\pi \cdot D_c}$	(rev/min) (inch/min)
Cutting speed	$v_c = \frac{n \cdot \pi \cdot D_c}{1000}$	(m/min) (ft/min)
Feed speed	$v_f = n \cdot ZEFP \cdot f_z$	(mm/min) (inch/min)
Feed per revolution	$f = ZEFP \cdot f_z$	(mm/rev) (inch/rev)
Material removal rate	$Q = \frac{a_e \cdot a_p \cdot v_f}{1000}$	(cm^3/min) ($inch^3$/min)
Cutting speed and RPM for copying	$v_c = \frac{n \cdot \pi \cdot D_w}{1000}$	(m/min) (ft/min)
	$D_w = 2 \cdot \sqrt{a_p (D_c - a_p)}$	(mm) (inch)
	$n = \frac{v_c \cdot 1000}{\pi \cdot D_w}$	(RPM)

Effective No. of teeth (ZEFP)
The effective No. of teeth (ZEFP) is used to calculate the feed speed (v_f) and the feed per revolution (f).
For most of the cutters the effective No. of teeth (ZEFP) is equal to the No. of teeth in the cutter (ZNP), but for some of the cutters ZEFP is less than ZNP.

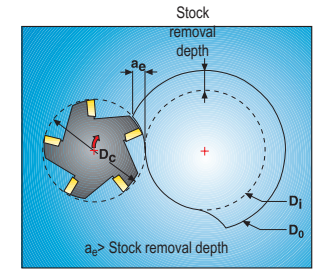
Cutting data calculation



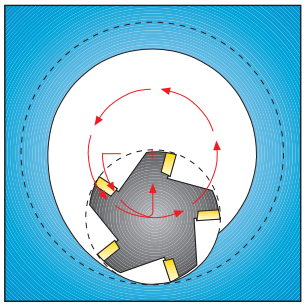
a_e	=	Width of cut mm/radial depth of cut	Example: Disc mill 335.19 Total No. of teeth (ZNP) = 12 Effective No. of teeth (ZEFP) = 6
a_p	=	Depth of cut mm/axial depth of cut	
DC	=	Cutter diameter	Explanation: 6 inserts on one side of the cutter and 6 overlapping inserts on the other side are used to get the full width (a_p) ,which means ZEFP = 6.
f	=	Feed per revolution	
f_z	=	Feed per tooth	
ZEFP	=	Effective No. of teeth for calculation of feed speed or feed per rev (see below)	
n	=	RPM	
Q	=	Material removal rate	
V_c	=	Cutting speed	
v_f	=	Feed speed	
v_f	=	Feed speed	

Cutting data calculation

Internal circular interpolation
When using circular interpolation or helical interpolation ramping to increase the diameter of a hole in a workpiece, the stock removal depth is not the same as the width of cut value. The real width of cut must be calculated from the formula below. The width of cut value is then used for calculation of feed/tooth and feed speed.

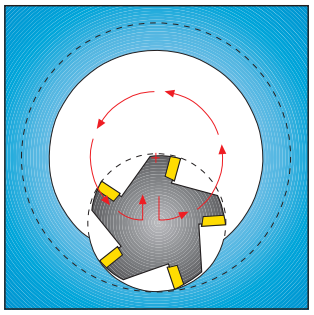


$$a_e = \frac{D_o^2 - D_i^2}{4\,(D_o - D_c)}$$



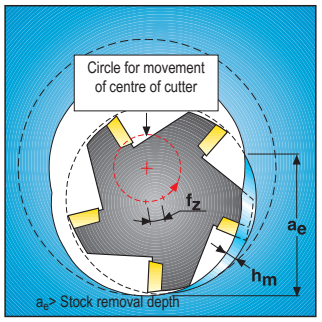
External circular interpolation
When using external circular interpolation or helical interpolation ramping to decrease the diameter of a round workpiece the stock removal depth is not the same as the width of cut value. The real width of cut must be calculated from the formula below.

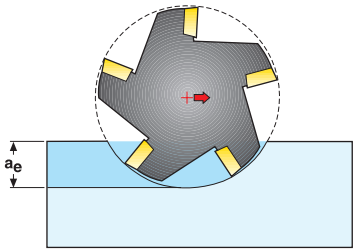
The width of cut is then used for calculation of feed/tooth and feed speed.



$$a_e = \frac{D_o^2 - D_i^2}{4\,(D_i + D_c)}$$

Increase the width of cut successively to full value
For circular interpolation operations it is recommended to successively increase the width of cut up to full value. When using radial infeed up to full width of cut, reduce the feed/tooth and feed speed to half.





Successive increase of width of cut – recommended method.

Radial infeed – Reduce feed/tooth.

Feed speed related to the centre of the cutter
When calculating feed speed and feed/tooth from average chip thickness using circular interpolation or helical interpolation ramping in an operation, the feed speed and feed/tooth are always related to the centre and not to the periphery of the cutter.

Side milling	
	Relative engagement of the cutter diameter (a_e/DC=%) 30% 20% 10% 5% Multiply the feed per tooth by the following factor 1.25 1.5 2.0 3.0

This table can be used for cutters with cutting edge angle = 90º

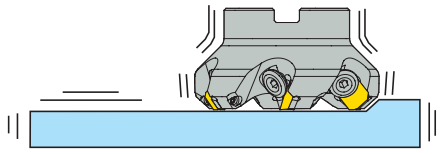
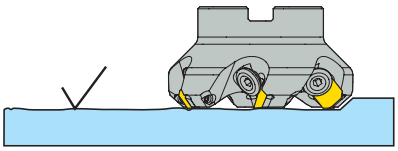
Instead of using the table above for calculating hm and fz, the following formula could be used if $a_e/DC < 30\%$.



$$h_m = f_z \cdot \sqrt{\frac{a_e}{D_C}}$$

$$f_z = h_m \cdot \sqrt{\frac{D_C}{a_e}}$$



Trouble shooting carbide milling

Vibrations

- Improve the stability of cutter and workpiece.
- Change cutter positioning.
- Minimize tool overhang.
- Reduce the cutting speed.
- Increase the feed rate.
- Reduce the depth of cut.
- Select a different insert geometriy, see page Insert geometry
- Use Steadyline antivibration bar

- Improve the stability of cutter and workpiece.
- Minimize tool overhang.
- Reduce the feed rate.
- Incease the cutting speed
- Use coolant.
- Use wiper inserts.
- Keep feed/rev value within wiper width
- Use Steadyline antivibration bar

Tool life problems

Rapid flank wear

- Reduce the cutting speed.
- Increase the feed rate.
- Climb milling.

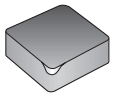
Comb cracks

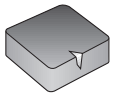
- Reduce the cutting speed.
- Reduce the feed rate.
- No coolant
- Change cutter positioning.

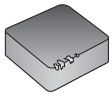
Rapid notch wear

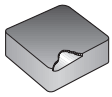
- Reduce the cutting speed.
- Increase the feed rate.
- Increase the depth of cut.
- Climb milling.
- Change cutter positioning

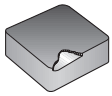
Built-up edge (BUE)

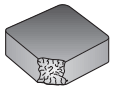






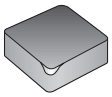


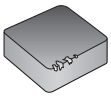




- Increase the cutting speed.
- Increase the feed rate
- No coolant.
- Climb milling.
- Change cutter positioning

Chipping





- Increase the cutting speed.
- reduce the feed rate.
- Conventional milling.
- Improve chip evacuation.
- Change cutter positioning.
- Minimize tool overhang.
- Improve stability.

Troubleshooting – PCBN

Problem	Cause	Suggested action(s)
Flank wear 	Not correct edge temperature	• Increase cutting speed • Increase feed rate • Increase depth of cut • Check cutting tool centre height • Check the ferrite content
Crater wear 	Not correct edge temperature	• Decrease cutting speed • Decrease feed rate • Reduce chamfer angle • Use E edge preparation • Use coated insert • Use coolant (only in continuous cut)
Notch wear 	Not correct edge temperature Too high cutting forces	• Increase cutting speed • Decrease feed rate • Increase insert approach angle (preferably round inserts) • Vary the depth of cut • Use inserts with chamfered cutting edges
Edge chipping 	Too high cutting forces	• Use inserts with chamfered cutting edges • Increase system rigidity • For interrupted cuts, chamfer the tool entry/exit slots and holes • Vary the cutting speed to eliminate vibrations
Edge flaking (continuous cut) 	Too high cutting forces	• Increase cutting speed • Reduce feed rate • Use chamfered and honed cutting edges • Check cutting tool center height • Reduce insert approach angle
Edge flaking (interrupted cut) 	Too high cutting forces	• Do not use coolant • Use chamfered and honed cutting edges • Reduce feed rate • Increase cutting speed • Check cutting tool centre height • Reduce insert approach angle
Edge breakage 	Too high cutting forces	• Reduce depth of cut • Reduce cutting speed • Increase nose radius • Use chamfered and honed inserts • Check cutting tool center height
Insert breakage 	Too high cutting forces	• Check insert seating • Check insert shim and insert clamp • Check cutting tool centre height

Troubleshooting – PCD

Problem	Cause	Suggested action(s)
Flank wear 	Wrong grade Precense of Fe/Ni/Co	• Change to coarser PCD grade • Check material composition • Reduce cutting speed • Use coolant
Built-up edge 	Not correct edge temperature Wrong grade	• Decrease or increase cutting speed • Choose a sharper insert • Change to a finer grade
Edge chipping 	Poor rigidity Wrong grade Incorrect cutting data High run-out	• Minimize vibrations • Change to a tougher grade • Change cutting data • Check set-up
Poor surface finish	Wrong grade Too high cutting data Incrrect wiper position	• Change to a finer PCD grade • Reduce cutting speed and feed rate • Check wiper position
Flaking of workpiece	Too high depth of cut	• Decrease depth of cut • Add entry chamfer on component

Torque keys, insert keys and Combimaster tightening torque

The range of Torque keys with fixed torque values are available in combinations of key grip/torque value for insert locking for most of the Seco milling products. By using a Torque key you always ensure the correct tightening force when mounting the insert.
Torque keys are calibrated according to ISO 6789.

Code key: T00-15P35

T00 = Torque screw driver type for Torx Plus blade
T00T= Torque T-handle type for Torx Plus blade

15P= Torx Plus size
35 = Torque value 3,5 Nm

Please observe that blades are not interchangeable between screw driver type and T-handle type.
Torx Plus® is a registered trade mark belonging to
Camcar-Textron (USA)

Cemented carbide inserts and insert carriers

Cemented carbide inserts and cemented carbide insert carriers from Seco Tools are not included in the product range intended for the following requirements.
Nevertheless Seco Tools can make the following declaration.
These products meet all requirements in RoHS (Restriction of the use of certain Hazardous Substances in electrical and electronic equipment), WEEE (Waste Electrical & Electronic Equipment) and ELV (End of Life Vehicles) requirements.
Products do not contain mercury, lead, hexavalent chromium, cadmium, CFC, HCFC, flame retardants or solvents in concentrations that exceed specifications in the regulations.

Regrinding:
Wet or dry grinding can produce potentially hazardous dusts or mists that can irritate skin, eyes, nose, throat and result in lung damage or disease. To avoid injury use proper safety precautions and protective equipment.

Disposal:
Seco Tools will buy back used inserts and solid carbide tools for recycling. Inserts and solid carbide tools should be separated from other metal waste (steel, aluminium, copper etc).
All packing material is fully recyclable.

CBN and PCD inserts

Inserts from Seco Tools are not included in the product range intended for the following requirements. Nevertheless Seco Tools can make the following declaration.
This product meets all requirements in RoHS (Restriction of the use of certain Hazardous Substances in electrical and electronic equipment), WEEE (Waste Electrical & Electronic Equipment) and ELV (End of Life Vehicles) requirements.
Products do not contain mercury, lead, hexavalent chromium, cadmium, CFC, HCFC, flame retardants or solvents in concentrations that exceed specifications in the regulations.

Regrinding:
Wet or dry grinding can produce potentially hazardous dusts or mists that can irritate skin, eyes, nose, throat and result in lung damage or disease. To avoid injury use proper safety precautions and protective equipment.

Disposal:
Seco Tools will buy back used CBN- or PCD-tipped inserts for recycling. Inserts should be separated from other metal waste (steel, aluminium, copper etc). Solid CBN-inserts may be discarded as landfill waste.
All packing material is fully recyclable.

Black oxide insert carriers

Insert carriers from Seco Tools are not included in the product range intended for the following requirements. Nevertheless Seco Tools can make the following declaration.
This product meets all requirements in RoHS (Restriction of the use of certain Hazardous Substances in electrical and electronic equipment), WEEE (Waste Electrical & Electronic Equipment) and ELV (End of Life Vehicles) requirements.
Products do not contain mercury, lead, hexavalent chromium, cadmium, CFC, HCFC, flame retardants or solvents in concentrations that exceed specifications in the regulations.

Disposal:
Used insert carriers may be sent for recycling together with ordinary steel waste (swarf and discarded steel scrap) for recycling.
All packing material is fully recyclable.

Cermet inserts

Inserts from Seco Tools are not included in the product range intended for the following requirements. Nevertheless Seco Tools can make the following declaration.
This product meets all requirements in RoHS (Restriction of the use of certain Hazardous Substances in electrical and electronic equipment), WEEE (Waste Electrical & Electronic Equipment) and ELV (End of Life Vehicles) requirements.
Cermet grade C15M inserts do contain nickel and will leach nickel when in contact with the skin. Amount of leaching is higher than specified in norm SS-EN 1811 Reference test method for release of nickel from products intended to come into direct and prolonged contact with the skin. These norms are intended for products that are in direct and prolonged contact with the skin and are therefore not directly applicable for cermet inserts. Persons with known allergic reactions to nickel are advised to wear protective gloves when handling cermet inserts.

Regrinding:
Wet or dry grinding can produce potentially hazardous dusts or mists that can irritate skin, eyes, nose, throat and result in lung damage or disease. To avoid injury use proper safety precautions and protective equipment.

Disposal:
Used inserts may be recycled. Inserts should be separated from other metal waste (steel, aluminium, copper, etc) including cemented carbide inserts.
All packing material is fully recyclable.

Nickel coated insert carriers

Insert carriers from Seco Tools are not included in the product range intended for the following requirements. Nevertheless Seco Tools can make the following declaration.
This product meets all requirements in RoHS (Restriction of the use of certain Hazardous Substances in electrical and electronic equipment), WEEE (Waste Electrical & Electronic Equipment) and ELV (End of Life Vehicles) requirements.
Products do not contain mercury, lead, hexavalent chromium, cadmium, CFC, HCFC, flame retardants or solvents in concentrations that exceed specifications in the regulations.
Insert carriers do contain nickel and will leach nickel when in contact with the skin. Amount of leaching is not higher then norm SS-EN 1811 Reference test method for release of nickel from products intended to come into direct and prolonged contact with the skin.
These norms are intended for products that are in direct and prolonged contact with the skin and are therefore not directly applicable for insert carriers.
Persons with known allergic reactions to nickel are advised to wear protective gloves when handling nickel coated insert carriers.

Disposal:
Used tools maybe sent for recycling together with ordinary steel waste (swarf and discarded steel scrap) for recycling.
All packing material is fully recyclable.

Holemaking

Seco

At Seco, we make tools, tech, and solutions for the most advanced manufacturing challenges on Earth. From our founding in Fagersta Sweden, to today's global company, our business has always been made to measure, and built on trust.

Combining cutting-edge, precision tools with lasting, personal partnerships, we're a true people company helping our partners discover the future of the manufacturing industry.

We're proud to make for makers, invent for inventors, and partner with pioneers. Driving the future forward with our focus on innovation. In short - if the right tool for the job exists, we'll deliver it. If it doesn't, we'll create it.

We're proud to put sustainability at the heart of everything we do, challenging perceptions of our industry, changing the process of manufacturing, and playing our own small part in shaping a brighter looking future.

Overcome any holemaking challenge

Holemaking can mean the difference between profit or scrapped parts and success requires the highest quality tooling for the greatest level of productivity enhancements and cost-reduction opportunities. To achieve that level of success, manufacturers need a partner who can help prove out processes and test new solutions. A partner with the ability to meet all your unique challenges with a truly comprehensive range of drilling, reaming, boring and threading tools.

Seco Tools is your single-source provider for comprehensive holemaking solutions. With years of experience developing holemaking solutions for customers' challenging applications, we have the R&D and metal cutting expertise to help manufacturers achieve fully optimal processes.

We are committed to our customers' holemaking productivity. That means you can purchase tools, receive technical support, consult with experts and develop solutions with just one provider and with access to the industry's most comprehensive range of indexable and solid drills, reamers, threaders and boring heads.

What are you looking for in making a hole?

⊕ **Positioning accuracy**
Seco Feedmax, A750 rough boring heads and the whole range of fine boring heads are the holemaking tools that offer the best positioning accuracy.

⌭ **Hole geometry**
For excellent hole geometry, such as roundness and straightness, all of Seco's drilling, boring and reaming tools offer the same high and consistent quality. Seco's boring heads will always guarantee the best results on straightness.

$\sqrt{R_a}$ **Surface finish**
For a really smooth hole surface, Bifix is your first choice and Seco's fine boring heads offer a full range of machining capabilities.

TCTR = Thread Tolerance Class

IT = Hole tolerance

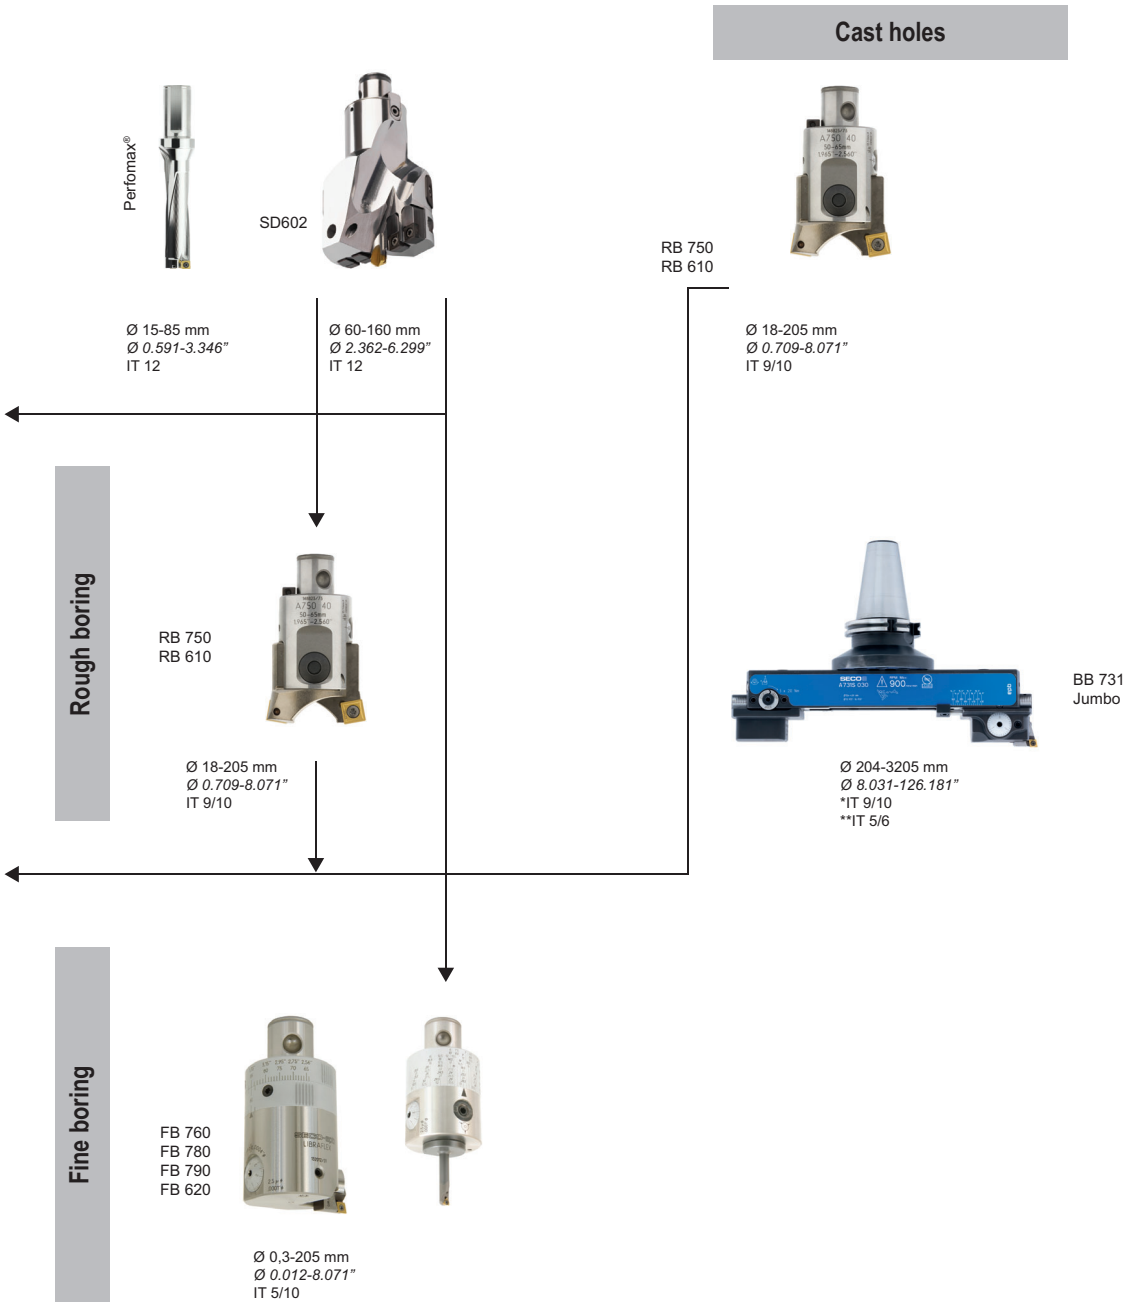
WF	Functional width



Tool guide

Feedmax, Crownloc and Perfomax are used to drill holes 0.1-160 mm (0.004-6.299") in diameter, with tolerances from IT7 to IT12.
For already cast holes, rough boring or semi-finishing is often used, with Bridge Bars and Jumbo Bridge Bars used for the large diameters.
Finally, high quality holes are made with reaming and fine boring heads, reaching tolerances of IT5 or IT6.
* Rough IT9/10, ** Fine IT 5/6

Threadmaster DTM, TM, TM2, 396.18 and 396.19;
The same cutter could be used for machining right and left hand threads. Metric and UN versions are only for internal threading. It's also possible to make all types of tolerances with the same cutter.

Threadmaster Tap:
Available in the most popular threads and tolerances in both cutting and forming taps.

Drilling range – Choice of drill

Seco Feedmax™ Solid carbide drills

PRODUCTIVITY

- High feeds and cutting speeds
- Close tolerance holes
- For applications with high stability
- For all workpiece materials

Crownloc® & Crownloc® Plus Exchangeble crown drills

FLEXIBILITY

- Exchangeable carbide tips
- Geometries for different workpiece materials
- No regrinding
- Several tip diameters for each drill body

Perfomax® Indexable insert drills

COST EFFECTIVENESS

- Grades and geometries for all workpiece materials
- Square inserts for low cost/hole
- Drilling, plunging, crossing holes with angled entrance or exit, boring, etc.
- High application security

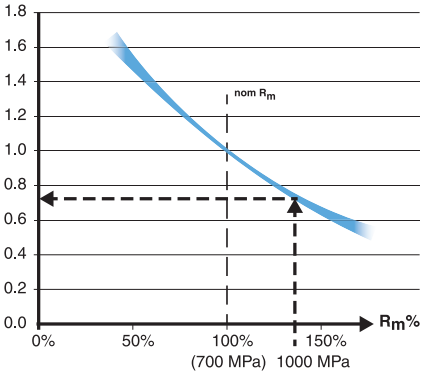
SMG - Introduction

As example the reference materials EN C45E for SMG P4 and EN 42 CrMo 4 for both SMG P5 and SMG H5 see further details in the following tables.
In SMG classification of workpiece materials involves a specific material standard in a specific condition assigned as reference for easy and unambigious adjustment of cutting data for any actual material compared to any Seco reference material. As examples the reference materials EN C45E for SMG P4 and EN 42 CrMo 4 for both SMG P5 and SMG H5 shown below in table 1 where the reference level material property is indicated.

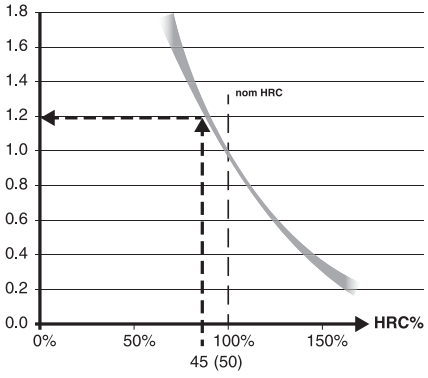
The foundation for SMG is a classification of workpiece materials based on their type rather than their relative machinability and consequently it contains workpiece materials like composites. It is comprehensive enough, but still easy to identify to which SMG a particular material belongs.
Each SMG has a specific material standard in a specific condition assigned as reference to allow easy adjustment of cutting data for any actual material compared to any Seco reference material see pages 698-709.

SMG	Description	Properties	Reference
P4	Low-alloy general structural steels, 0.25% < C < 0.67%wt Low-alloy Quench & Temper steels	520 < R_m < 1200	C 45E R_m = 660 N/mm^2
P5	Structural steels, 0.25% < C < 0.67%wt Quench & Temper steels	550 < R_m < 1200	42 CrMo 4 R_m = 700 N/mm^2

SMG	Description	Properties	Reference
H5	Quenched & Tempered steels	38 < HRC < 56	42 CrMo 4 50 HRC



Focusing specifically on EN 42 CrMo 4 in annealed condition, the ultimate tensile strength R_m may typically vary between R_m = 630 N/mm^2 and R_m = 780 N/mm^2, which provide a reference level for SMG P5.



In Quenched & Tempered condition, the ultimate tensile strength Rm may typically be between R_m = 900 N/mm^2 and R_m = 1100 N/mm^2 thus still belongs to SMG P5.
However, if hardened above R_m = 1200 N/mm^2 it now belongs to SMG H5.

SMG	EN	W.-Nr	AFNOR	BS	UNI	JIS	AISI / ASTM	GOST	Condition	R_{m_nom}	HRC_{nom}
P4	42 CrMo 4	1.1201	42 CD 4	708 M 40	42 CrMo 4	SCM 440 (H)	4142, 4140	38HM	Annealed	700	
	42 CrMo 4	1.1201	42 CD 4	708 M 40	42 CrMo 4	SCM 440 (H)	4142, 4140	38HM	Quenched & Tempered	1000	
H5	42 CrMo 4	1.1201	42 CD 4	708 M 40	42 CrMo 4	SCM 440 (H)	4142, 4140	38HM	Quenched & Tempered		45
	42 CrMo 4	1.1201	42 CD 4	708 M 40	42 CrMo 4	SCM 440 (H)	4142, 4140	38HM	Quenched & Tempered		50

The EN 42CrMo4 quench & tempered steel could be used to illustrate the machinability dependence of materials' condition.

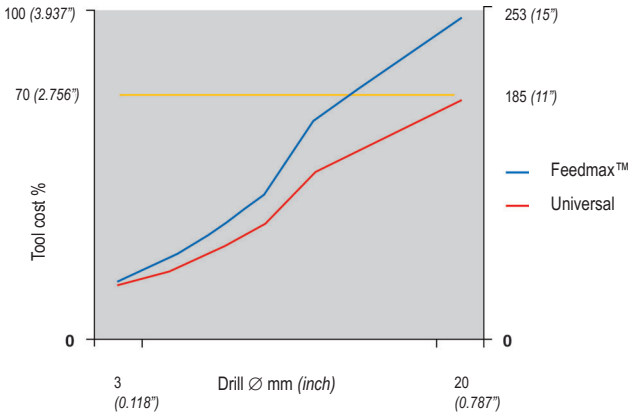
The graphs below indicate how speed recommendations for a nominal material conditions may be adjusted for relative R_m (left diagram valid for ISO-P) and for relative HRC (valid for ISO-H).

To further illustrate how the SMG P5 nominal v_c can be adjusted to a more accurate recommended v_c we need ultimate tensile strength Rm data and in this case we use the EN 42 CrMo 4 quenched & tempered to R_m = 1000 N/mm2 according to above table (bold blue arrows). Assume that we find that the SMG P5 nominal v_c = 280 m/min for a certain product and machining.
Then, actual recommended v_c = 280 m/min x 0,75 = 210 m/min. Consequently in the SMG H5 the nominal v_c can be adjusted using the hardened EN 42 CrMo 4 at HRC 45 (smaller grey arrows).

Assume that the SMG H5 nominal v_c = 50 m/min for a certain product and machining using a coated cemented carbide tool then, actual recommended v_c = 50 m/min x 1,2 = 60 m/min.
For further workpiece material details please see page(s) 698-709 and suggested cutting data at applicable pages.
For more convenient cutting data handling we recommend applicable tools in My Pages – Suggest on www.secotools.com

High performance and Universal solutions

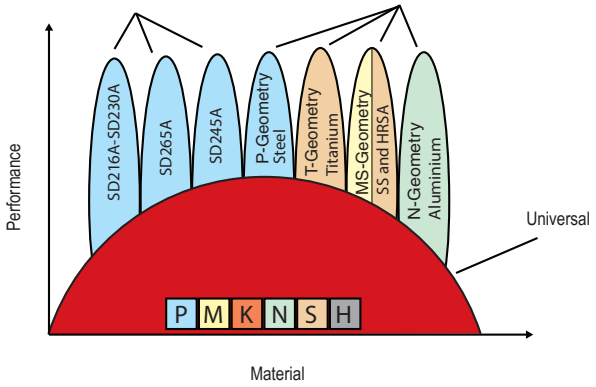
What are you looking for in your solid drill application?



Universal – Versatile general performance solid carbide drill

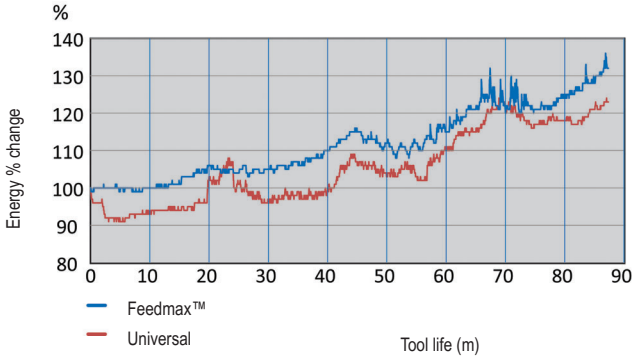
Universal is a multi purpose general performance solid carbide drill, that can be used in a wide range of materials and applications in all industry segments. Thanks to the design with a strong self centering 140 degree drill point, polished chip flutes and the excellent quality of the drill - high capacity utilization, application security and versatility is provided at a very low cost.
With Universal stock holding cost can be reduced and greater machining flexibility is offered, leading to reduced set-up time. Universal is an alternative to Feedmax™ in operations when versatility, flexibility and reduced stock holding cost are the main targets.

Feedmax™ – Productive high performance solid carbide drill



Feedmax™ offers a unique combination of state-of-the-art carbide, coating- and geometry technology.
Feedmax™ is designed for high productivity and low cost per hole with high feeds up to 0,70 mm/rev *(0.028 in/rev)* and high cutting speeds up to 220 m/min *(720 sf/min)*. With excellent centering capabilities - high hole quality is achieved with no need for center drilling operations. Thanks to the modern coating with high hot hardness, the strong cutting edges with protective corner chamfers, high strength carbide rod, excellent chip evacuation capabilities and a superb cutting edge quality - a long and predictable tool life is achieved.
Feedmax™ has a wide range of optimized geometries for different materials and applications, to obtain a good quality hole at the lowest cost.

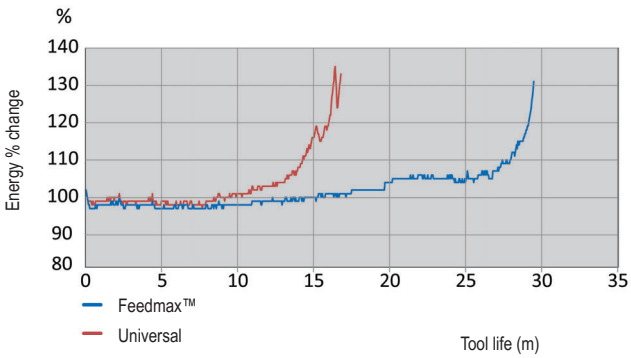
MRR, Metal removal rate (cm^3 / min)



Feedmax™
Application optimized geometries

Feedmax™
Material optimized geometries

Tool life, lower cutting data

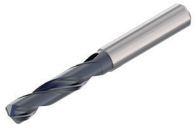


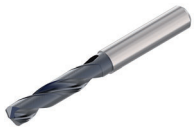
First hole is set as reference, 100% based on the spindle power
Cutting data
v_c = 90 m/min
f = 0,15 mm/rev

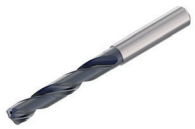
v_c = 295 sf/min
f = 0.006 in/rev

Material = SMG P5-P6, SS2244, DIN41CrMo4, AISI 4140

Tool life, high cutting data







First hole is set as reference, 100% based on the spindle power
Cutting data
v_c = 160 m/min
f = 0,24 mm/rev

v_c = 525 sf/min
f = 0.009 in/rev

Material =SMG P5-P6, SS2244, DIN41CrMo4, AISI 4140

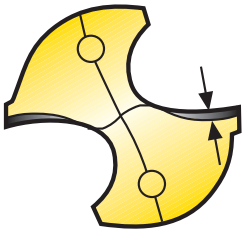
Set up

Holding/run-Out
Drills with cylindrical shanks can be used with Shrinkfitholder, hydraulic chucks or collet chucks.
Keep the total indicated run-out of the drill within 0,04 mm (0.0016”) measured in the spindle.
For best result keep run-out 0,02 mm (0.0008”).

Stability
The stability of the application is important to obtain the best tool life and hole accuracy. Check the condition of the machine spindle, fixture and fixturing of the component to secure maximum stability and rigidity.
Unstable conditions can cause tool breakages.



Recommended Tool Holders

For best result use holders:
Type 5603 - Shrinkfit holders, DIN type
Type 5834/HC/HCR/HCS
Type 5672 - High precision collet chucks
For more information see Tooling Systems catalog

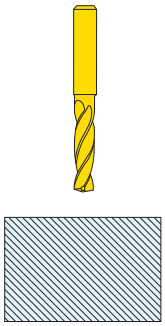
Max. 0,02 mm (0.0008”)

Tool Life
Drills should not be used with flank wear exceeding 0,1-0,3 mm (0.004-0.012”) measured at the largest point.

0,1-0,3 mm (0.004-0.012”)

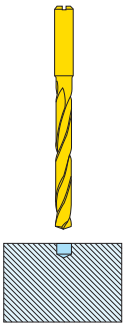
Shrinkfit holder
(For cylindrical, R1 shanks only)

Hydraulic chuck
(For cylindrical, R1 shanks only)



High precision collet chucks
(For cylindrical, R1 shanks only)

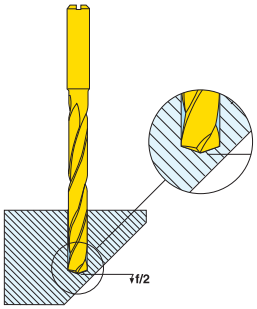
Machining methods



Hole entrance on a machined surface

3-15 x D

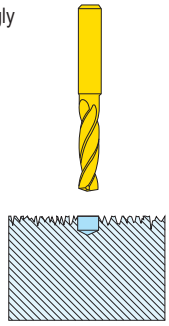
No pre-drilling or entrance feed needed.



> 16 x D

When using a longer drill it's recommended to drill a pilot hole.

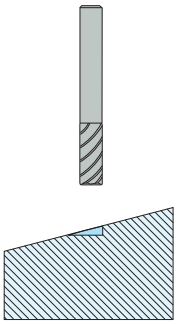
Angled Hole Exits



Before hole exit reduce the feed/rev by 50%.

Or use SD245A drills.

Irregular/angled Hole entrance

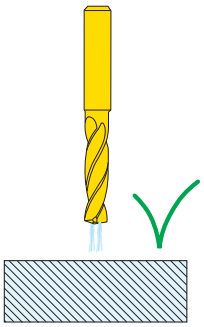


If irregular or angle entrance use pre operations accordingly

Regular hole entrance

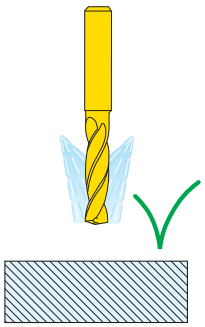
Pre drill with a short standard Feedmax.

Pre-machining alternatives



Angle-hole entrance

Machine a flat using an end mill from the Seco range.



Coolant Recommendations

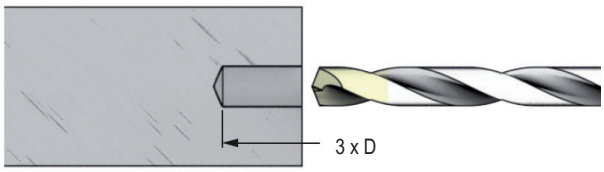
1.

First choice

2.

≤ 5 x D

1. Coolant pressure*
Minimum recommended coolant pressure 10 bar with ≤ 5 x D
Minimum recommended coolant pressure 30 bar with > 5 x D
Minimum recommended coolant pressure 40 bar with > 16 x D



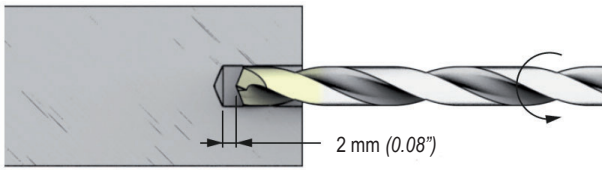
2. Coolant mix
Recommended emulsion mix 6-8%.
When drilling in stainless steels, superalloys and high strength steels a mix of 10% is recommended.

*If lower coolant pressure is used, adjust by reducing cutting data accordingly.

Machining strategy – Productivity

SD216A (16 x D) to SD2040A (40 x D)

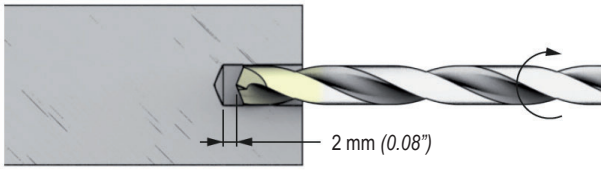
1. Pilot drilling



≥10 bar
ON

- SD203A

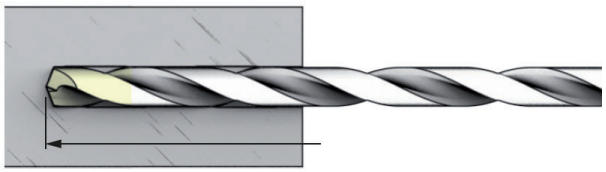
2. Feeding in



OFF

- Up to SD2040A
- With counter clockwise rotation and stop 2 mm above hole depth
- n_{max} = 100 rpm
- v_f = 1000 mm/min

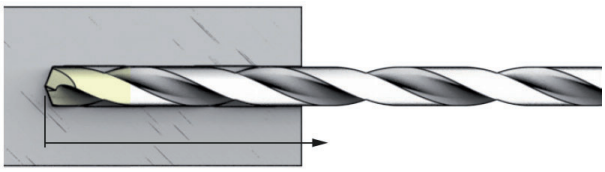
3. Change spindle rotation



≥40 bar
ON

- Up to SD2040A
- Change rotation to clockwise and start coolant

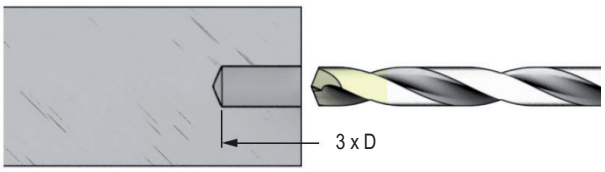
4. Deep-hole drilling



≥40 bar
ON

- Up to SD2040A
- v_c = 100%
- v_f = 100%

5. Retracting



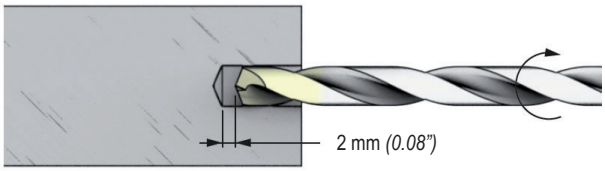
OFF

- Up to SD2040A
- n_{max} = 100 rpm
- v_f = 1000 mm/min

Machining strategy – Tool-cost saving

SD230A (30 x D) to SD2060A (60 x D)

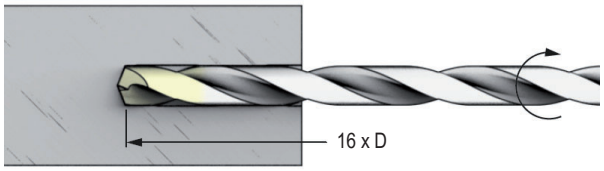
1. Pilot drilling



≥10 bar
ON

- SD203A

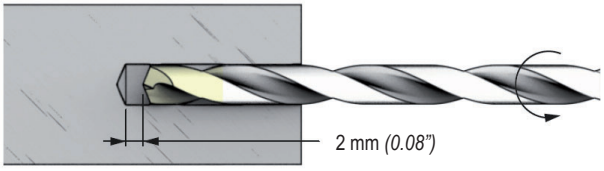
2. Feeding in



OFF

- SD216A
- With clockwise rotation and stop 2 mm above hole depth
- n_{max} = 100 rpm
- v_f = 1000 mm/min

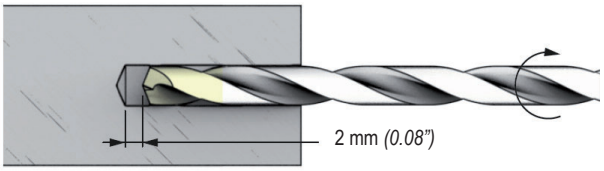
3. Pre drilling



≥10 bar
ON

- SD216A
- v_c = 100%
- v_f = 100%

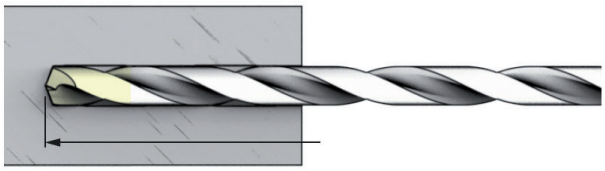
4. Feeding in



OFF

- SD230A - SD2060A
- With counter clockwise rotation and stop 2 mm above hole depth
- n_{max} = 100 rpm
- v_f = 1000 mm/min

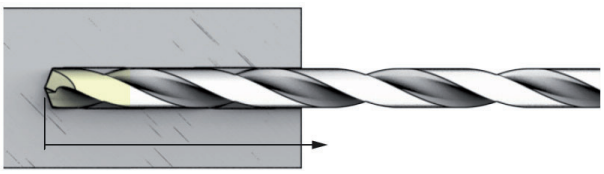
5. Change spindle rotation



≥40 bar
ON

- SD230A - SD2060A
- Change rotation to clockwise and start coolant

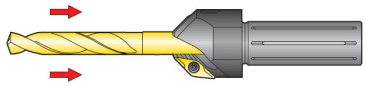
6. Deep-hole drilling



≥40 bar
ON

- SD230A - SD2060A
- v_c = 100%
- v_f = 100%

7. Retracting



OFF

- SD230A - SD2060A
- n_{max} = 100 rpm
- v_f = 1000 mm/min

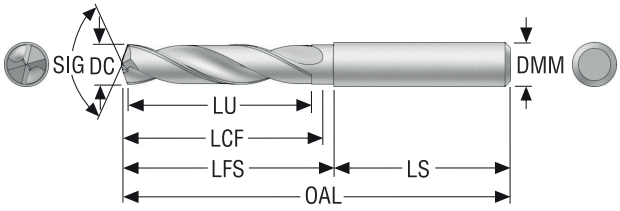
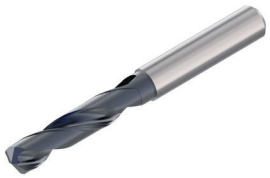
To be used with cylindrical shank only (R1).



Seco Universal – Single diameter drills



Seco Universal solid carbide drills are a cost effective and versatile solution with a perfect fit for small and medium batch production. The Seco Universal drills are suitable for most applications across all industry segments.

- Multi-purpose, 4-facett point geometry that provides excellent centering capability
- Highly wear resistant TiAlN coating secures for long tool life
- Can be used in conjunction with Threadmaster™ Tap and in pre-bore operations with Nanofix™/ Precimaster™ Plus

SD1103A

Drilling depth ~ 3 x D – Metric/Inch

- Cylindrical shank DIN 6537A
- DC tolerance m7
- Internal coolant
- For cutting data see page(s) 141
- For intermediate diameters see the MyDesign software.

SD1105A

Drilling depth ~ 5 x D – Metric/Inch

- Cylindrical shank DIN 6537A
- Internal coolant
- For cutting data see page(s) 142
- For intermediate diameters see the MyDesign software.

SD1108A

Drilling depth ~ 8 x D – Metric/Inch

- Cylindrical shank DIN 6537A
- DC tolerance m7
- Internal coolant
- For cutting data see page(s) 143
- For intermediate diameters see the MyDesign software.

SD1112A

Drilling depth ~ 12 x D – Metric/Inch

- Cylindrical shank DIN 6537A
- DC tolerance m7
- Internal coolant
- For cutting data see page(s) 144
- For intermediate diameters see the MyDesign software.
